Isoprenoid Synthesis in Plants and Microorganisms Thomas J. Bach, Michel Rohmer, 2012-09-19 Isoprenoids are important in primary and secondary metabolism. They have implications in a myriad of physiological processes notably in plants, microorganisms and parasites, and biological activities at the cellular, organism, and ecosystem levels. The importance of isoprenoids in various areas of the scientific world has spurred intense research worldwide. Also their role in nutraceuticals has stimulated scientific curiosity. Literature on isoprenoids is widely scattered in journals with quite differing readerships and geographic distribution. A comprehensive book on isoprenoids does not exist. *Isoprenoid Synthesis in Plants and Microorganisms: New Concepts and Experimental Approaches* fills this gap by presenting the latest and the most applicable information on isoprenoids. The most recent TERPNET conference serves as the backdrop and provides much of the inspiration for the topics covered in the book. Additional topics of interest are covered as well, making *Isoprenoid Synthesis in Plants and Microorganisms: New Concepts and Experimental Approaches* the most comprehensive review of isoprenoid synthesis to date.

Flavour Science Andreas Degenhardt, Rüdiger Wittlake, Stefan Seilwind, Margit Liebig, Christa Runge, Jens-Michael Hilmer, Gerhard Krammer, André Gohr, Ludger Wessjohann, 2013-07-29 The meaningful correlation of sensory data with analytical data is one of the most challenging tasks in flavor research. In beef stocks in particular, due to the presence of low levels of aroma-active compounds and the taste contribution of non-volatile molecules to the typical “juiciness” character, the consumer encounters a complex matrix situation. The goal of our study was to carry out a comprehensive analysis of all relevant flavor molecules and the correlation to human sensory data. A technique recently developed at the IPB and termed “reverse metabolomics” was used to link biological activity (i.e., sensory data) with variations in the metabolic profile (i.e., analytical data). We used this methodology for the first time to correlate sensorial attributes and GC-MS, LC-MS, and NMR data in culinary beef stocks. Reverse metabolomics was applied to study the link between sensory and chemical composition in a series of freshly prepared culinary beef stocks. A set of 10 different beef stocks was prepared. The degree of liking of the samples was recorded on a hedonic 1–9 scale. Analysis of the stocks was performed by LC-MS, GC-MS, and NMR. ¹H-NMR data directly obtained from the meat stock were very complex. Analysis of this dataset by reverse metabolomics revealed

some basic structural elements of the key taste compounds, such as carnosine or anserine. The reverse metabolomics correlation of quantitative data with partiality revealed the importance of a set of compounds. This relevance of these compounds has been confirmed by additional sensory experiments which showed an increase in perceived juiciness.

Flavour Science Vicente Ferreira, Ricardo Lopez, 2013-07-29 Flavor science is continually evolving. Remaining current with the latest research and establishing a broad and sound understanding of the major developments and breakthroughs can be a challenge. The Weurman Flavour Research Symposium has long been regarded as the premier professional meeting focused on the science of flavor. Flavour Science, an extensive review of the most recent symposium, presents the latest in flavor research, enriching the chemistry-based vision of most flavorists and flavor chemists with understanding from a broad range of fields, including human physiology, ethology, psychophysics, genetics, bioinformatics or metabolomics. This book is ideal for all flavor scientists, food chemists and sensory scientists and has a strong audience among enologists as well. - Focuses on the rapidly changing field of flavor science - Includes the latest information on the physiology, chemistry and measurement of flavor - Presents practical information on the flavor industry and emerging trends

Phytochemistry in the Genomics and Post-Genomics Eras John Romeo, R.A. Dixon, 2002-06-20 This monograph series is commissioned by the Phytochemical Society of North America (PSNA). The volumes in this series contain articles on developing topics of interest to scientists, students and individuals interested in recent developments in the biochemistry, chemistry and molecular biology of plants. Volume 36 centers on the role of phytochemistry in the rapid developments in biology brought about by the application of large-scale genomics approaches. Several functional genomic approaches discussed in this volume address plant gene function on a large scale. Plants are combinatorial chemists par excellence, and understanding the principles that relate enzyme structure to function will open up unlimited possibilities for the rational design of new enzymes to generate novel biologically active natural products. Knowledge of the molecular genetics of plant natural product pathways will also facilitate the engineering of these pathways for plant improvement and human benefit. Phytochemistry truly has a great future in the genomics and post-genomics eras.

The Role of Natural Products in Drug Discovery J. Mulzer, R. Bohlmann, 2013-04-17 Natural Products have been important sources of useful drugs from prehistoric times to the present. This book gives an overview about this field and provides important recent contributions to the discovery of new drugs generated by research on natural products. Total synthesis of natural products with interesting biological activities is paving the way for the preparation of new and improved analogs. The methods of combinatorial chemistry permit the selection of the best drug from a large number of candidates. Beyond synthesis and evaluation of organic molecules a number of new bioorganic methods are coming to the fore and will be discussed in this issue of the Ernst Schering Research Foundation workshop proceedings.

Regulation der Jasmonsäurebiosynthese durch posttranslationale Modifikation der Oxophytodiensäurereduktase 3 (OPR3)
Kristin Mayer, 2013-05-08 Die Bildung des Phytohormons Jasmonsäure unterliegt einer strengen Kontrolle und ist zeitlich wie Gewebe-abhängig sehr genau reguliert. Hinweise auf einen möglichen Regulationsmechanismus durch reversible Phosphorylierung ergaben sich aus der Röntgenstrukturanalyse der Oxophytodiensäurereduktase 3 (OPR3), die einen limitierenden Schritt der Jasmonsäurebiosynthese katalysiert. OPR3 liegt hier als Dimer vor, welches als inaktive Form der OPR3 interpretiert wird. Tatsächlich konnte gezeigt werden, dass monomere OPR3-Formen eine höhere Aktivität aufweisen. Phosphorylierte Isoformen der OPR3 konnten in vivo nachgewiesen werden und wurden vorwiegend in Geweben detektiert, in denen der Biosyntheseweg der Jasmonsäure aktiv ist. Es liegt daher der Schluss nahe, dass eine OPR3-Phosphorylierung zu deren Aktivierung führt. Als posttranslationale Modifizierungen von OPR3 wurden die N α -terminale Acetylierung und Phosphorylierungen an den Threoninen 2 und 11 massenspektrometrisch nachgewiesen. Auch wenn die genauen Mechanismen der OPR3-Regulation, sowie die Bedeutung der identifizierten posttranslationalen Modifikationen der OPR3 noch nicht vollständig geklärt sind, konnte gezeigt werden, dass eine Regulation der Jasmonsäure-Biosynthese auf Ebene der OPR3 über das Monomer/Dimer-Gleichgewicht stattfindet.
