VIA Version 3 Changes VIA Version 3 is a refactoring of how the UI works in VIA, to allow fully customized UI within VIA to control firmware parameters like lighting, but also any custom feature implemented in the firmware, either in QMK Core or at the keyboard level. **Specification - VIA** In order for VIA to configure a keyboard, it requires a definition of the keyboard - the physical layout of keys, any layout options, and other configurable elements like rotary encoders (knobs), lighting, etc. VIA | VIA Helpful Configure, test and design in one place - VIA is the last application you'll need for your keyboard. Custom UI - VIA The built-in menus of VIA (Keymap, Layouts, Macros, Save + Load) will be displayed depending on keyboard definition and firmware. The menus element is used to define more menus in VIA. **Configuring QMK - VIA** VIA works by communicating with the firmware that is running on the device and sending it commands across USB. Enabling the VIA feature in QMK enables both the ability to communicate with the VIA Configurator and the ability to store keymaps and other settings. *Supported Keyboards - VIA* Discover which keyboards are compatible with VIA and learn more about its features and capabilities. **Layouts - VIA** VIA requires a definition of both the physical arrangement of keys and the mapping of those keys to the switch matrix. It optionally requires definition of layout options - alternative physical arrangements of keys, such as different bottom rows, split right shift, etc. Built-in Menus - VIA [{ "label": "Audio", "content": [{ "label": "General", "content": [{ "label": "Audio Enable", "type": "toggle", "content": ["id_qmk_audio_enable", 4, 1 ... No longer will your key testing be a silent, joyless experience.
