Concepts, Strategies and Models to Enhance Physics Teaching and Learning Eilish McLoughlin, Paul van Kampen, 2019-07-24 This book discusses novel research on and practices in the field of physics teaching and learning. It gathers selected high-quality studies that were presented at the GIREP-ICPE-EPEC 2017 conference, which was jointly organised by the International Research Group on Physics Teaching (GIREP); European Physical Society - Physics Education Division, and the Physics Education Commission of the International Union of Pure and Applied Physics (IUPAP). The respective chapters address a wide variety of topics and approaches, pursued in various contexts and settings, all of which represent valuable contributions to the field of physics education research. Examples include the design of curricula and strategies to develop student competencies—including knowledge, skills, attitudes and values; workshop approaches to teacher education; and pedagogical strategies used to engage and motivate students. This book shares essential insights into current research on physics education and will be of interest to physics teachers, teacher educators and physics education researchers around the world who are working to combine research and practice in physics teaching and learning.

Urban and Transit Planning (Vol 1): Strategies, Innovations and Climate Management Francesco Alberti, Simon Elias Bibri, Cristina Piselli, Paola Gallo, Abraham R. Matamanda, Hamid Rabiei, Rosa Romano, Ayse Ozcan Buckley, 2025-03-04 This book explores aspects of creating cities and structures with a focus on sustainability. It provides an analysis of contemporary methodologies, technologies, and principles essential for designing urban environments and buildings that significantly reduce environmental impact. Moreover, it emphasizes the importance of energy efficiency, resource conservation, and the integration of green spaces to enhance the quality of life for urban dwellers. Covering a broad spectrum of topics, from sustainable urban mobility to green architecture and smart city initiatives, this book serves as an invaluable resource for professionals, researchers, and students. Furthermore, it aims to inspire and guide those dedicated to developing a sustainable future through innovative and responsible urban planning and architectural design practices.

Energy and Seismic Renovation Strategies for Sustainable Cities Giuseppe Margani, 2019-06-11 The principle of sustainability should be strictly connected with safety, since both aim to conserve resources: in the case of sustainability, the resources are typically thought of as environmental, while in the case of safety, the resources are basically human. In spite of this common ground, discussions on sustainability usually give insufficient attention to safety. In the last years the EU has

made large investments to increase the energy efficiency of the existing building stock, paving the way for a low-carbon future; however, less effort has been made to enhance its seismic resilience. Therefore, the safety and, consequently, the sustainability of towns situated in earthquake-prone countries remain inadequate. In such countries, energy renovation actions should be combined with seismic retrofitting. However, a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions, especially for multi-owner housing and high-rise buildings. These barriers are of different kinds: technical (e.g., unfeasibility and/or ineffectiveness of conventional retrofit solutions), financial (e.g., high renovation costs, insufficient incentives/subsidies), organizational (e.g., occupants' disruption and relocation, renovation consensus by condominium ownerships), and cultural/social (insufficient information and skills, lack of adequate policy measures for promoting renovation actions). This book aims to overcome these barriers and to bridge the gap between sustainability and safety, so to conserve both human and environmental resources.

China intelligence Antonio Teti, 2024-03-20T00:00:00+01:00 “Una spia nel posto giusto sostituisce 20.000 uomini al fronte” ebbe ad asserire Napoleone Bonaparte, che fu certamente un grande stratega ma che ebbe anche il merito di aver ben compreso che le informazioni potevano rappresentare un elemento di indiscusso valore sul piano dell’individuazione delle decisioni migliori da assumere. Un assioma che la Cina ha assimilato nel corso dei secoli grazie anche agli insegnamenti elargiti dal leggendario Sun Tzu nel suo celebre scritto L’Arte della guerra, opera in cui si intravedono i primi insegnamenti dell’arte dell’intelligence. Nell’ultimo decennio la Cina ha assorbito un altro principio: la consapevolezza che il mondo virtuale può rappresentare un formidabile ecosistema informativo per la conduzione di attività di spionaggio, controspionaggio, propaganda e condizionamento psicologico-comportamentale.

Guida all’energia nella natura e nelle civiltà umane Michele Calì, Romano Borchellini, GianVincenzo Fracastoro, Andrea Lanzini, 2014-10-03 L’energia è causa ed effetto di ogni evento fisico dell’universo, dall’infinitamente piccolo alle galassie. Gli uomini hanno imparato a servirsene in quantità sempre maggiori, per dominare la natura e accrescere benessere e potere. Lo hanno fatto senza mai realmente curarsi delle conseguenze sull’ambiente, oggi diventate ingenti e di ogni tipo, modifiche del clima, impoverimento delle risorse, scioglimento dell’acqua dolce dei ghiacciai, inquinamento di aria, acque e terreni; influenzano persino l’assetto delle società umane nelle quali la disponibilità di energia è spesso causa di povertà e di gravi conflitti. La vera sfida per l’umanità è trovare una soluzione del paradosso per cui il dominio sull’energia è irrinunciabile ma è anche la causa potenziale di danni inaccettabili. Un gruppo di docenti del Politecnico di Torino ha aderito alla proposta della Fondazione Telios di scrivere un libro divulgativo su questa situazione.
