Naming Food After Places Apostolos G. Papadopoulos,Maria Fonte,2016-04-29 Bringing together a range of case studies from Ireland, Scotland, Sweden, Germany, Norway, Poland, Italy, Portugal, Spain, and Greece, this book compares and contrasts different models of food re-localization. The richness and complexity of the international case studies provide a broad understanding of the characteristics of the re-localization movement, while the analysis of knowledge forms and dynamics provides an innovative new theoretical approach. Each of the national teams work on the basis of an agreed common framework, resulting in a strongly coherent and comprehensive continental overview. This shows how the actors involved are pursuing their objectives in different regional and national contexts, re-embedding, socially and ecologically, the relation between food production, consumption and places.

The Use of Artificial Intelligence for Space Applications Cosimo Ieracitano,Nadia Mammone,Marco Di Clemente,Mufti Mahmud,Roberto Furfaro,Francesco Carlo Morabito,2023-06-16 This book is an ideal and practical resource on the potential impact Artificial Intelligence (AI) can have in space sciences and applications. AI for Space Application presents a hands-on approach to browse in the subject and to learning how to do. AI is not yet fully accepted as a pervasive technology in space

applications because they are often mission-critical and the cost of space equipment and modules raises skepticism on any practical use and reliability. However, it is evident that its potential impact on many aspects is dramatic. Starting from either actual or experimental realizations, the book accompanies the reader through such fascinating subjects like space exploration, autonomous navigation and landing, rover control and guidance on rough surfaces, image analysis automation for planet or star classification, and for space debris avoidance without human intervention. This kind of approach may facilitate further investigations on the same or similar subjects, as the future of space explorations is going toward adopting AI. The intended audience of the book are researchers from academia and space industries and practitioners in related start-ups.
