Stable Isotopes in Tree Rings Rolf T. W. Siegwolf, J. Renée Brooks, John Roden, Matthias Saurer, 2022-06-06 This Open Access volume highlights how tree ring stable isotopes have been used to address a range of environmental issues from paleoclimatology to forest management, and anthropogenic impacts on forest growth. It will further evaluate weaknesses and strengths of isotope applications in tree rings. In contrast to older tree ring studies, which predominantly applied a pure statistical approach this book will focus on physiological mechanisms that influence isotopic signals and reflect environmental impacts. Focusing on connections between physiological responses and drivers of isotope variation will also

clarify why environmental impacts are not linearly reflected in isotope ratios and tree ring widths. This volume will be of interest to any researcher and educator who uses tree rings (and other organic matter proxies) to reconstruct paleoclimate as well as to understand contemporary functional processes and anthropogenic influences on native ecosystems. The use of stable isotopes in biogeochemical studies has expanded greatly in recent years, making this volume a valuable resource to a growing and vibrant community of researchers.

**Brief Forms in Medieval and Renaissance Hispanic Literature** Alejandro Coroleu,2017-08-21 The studies gathered in this volume engage in different ways with the ideas of André Jolles (1874-1946), whose *Einfache Formen* ("Simple Forms") was first published in 1930. Trained as an anthropologist, Jolles argued that these "simple" forms - *Legende* (legend), *Sage* (saga), *Mythe* (myth), *Rätsel* (riddle), *Spruch* (proverb), *Kasus* (case), *Memorable* (memorable action), *Märchen* (folk or fairy tale) and *Witz* (joke or witticism) - which had circulated at a very early stage of human culture underlay the more sophisticated genres of literature. Unlike epic or tragedy, many of the simple forms are not theorised in classical rhetoric. The essays presented here focus on their reception in Hispanic culture from the Middle Ages to circa 1650. As such, the book will be of interest to scholars of medieval and early modern Spanish, Catalan and Latin literature. It will also appeal to historians of Humanism as well as scholars working on classical and Renaissance literary theory.

**Chemical Transformations of Carbon Dioxide** Xiao-Feng Wu, Matthias Beller, 2018-07-10 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

*Consumer Perception of Food Attributes* Shigeru Matsumoto, Tsunehiro Otsuki, 2018-06-19 Food credence attributes are food features that are difficult to verify even after consumption. Consumers, today, are concerned about many food credence attributes, including animal rights, contamination risk, fair trade practice, genetic modification, geographical origin, and organic farming. For the past several decades, many scholars have analyzed the value consumers place on credence

attributes and have reported that consumers will pay a premium for foods with these desirable properties. In addition, their studies reveal that individual consumers place greater importance on some credence attributes than others. For example, some are seriously concerned about animal welfare, while others are solely concerned about food safety. One of the objectives of this book is to summarize recent empirical findings from scholarly works on how consumers value food credence attributes. Such knowledge would benefit producers, processors, retailers, and policy makers. Another objective of this book is to discuss the effectiveness of the programs that have been introduced to strengthen the relationship between producers and consumers. Many programs have been developed to more effectively inform consumers regarding food production processes.

**Rectifiable Measures, Square Functions Involving Densities, and the Cauchy Transform** Xavier Tolsa, 2017-01-18 This monograph is devoted to the proof of two related results. The first one asserts that if  $\mu$  is a Radon measure in  $\mathbb{R}^n$  satisfying for  $\mu$ -a.e.  $x$ , then  $\mu$  is rectifiable. Since the converse implication is already known to hold, this yields the following characterization of rectifiable sets: a set with finite  $n$ -dimensional Hausdorff measure is rectifiable if and only if  $H^n \llcorner E$ . The second result of the monograph deals with the relationship between the above square function in the complex plane and the Cauchy transform. Assuming that  $\mu$  has linear growth, it is proved that  $\mu$  is bounded in  $L^2$  if and only if for every square  $Q$ .

**Mathematical Modelling in Biomedicine** Vitaly Volpert, 2021-01-26 Mathematical modelling in biomedicine is a rapidly developing scientific discipline at the intersection of medicine, biology, mathematics, physics, and computer science. Its progress is stimulated by fundamental scientific questions and by the applications to public health. This book represents a collection of papers devoted to mathematical modelling of various physiological problems in normal and pathological conditions. It covers a broad range of topics including cardiovascular system and diseases, heart and brain modelling, tumor growth, viral infections, and immune response. Computational models of blood circulation are used to study the influence of heart arrhythmias on coronary blood flow and on operating modes for left-ventricle-assisted devices. Wave propagation in the cardiac tissue is investigated in order to show the influence of tissue heterogeneity and fibrosis. The models of tumor growth are used to determine optimal protocols of antiangiogenic and radiotherapy. The models of viral hepatitis kinetics are considered for the parameter identification, and the evolution of viral quasi-species is investigated. The book presents the state-of-the-art in mathematical modelling in biomedicine and opens new perspectives in this passionate field of research.

*European Handbook of Crowdsourced Geographic Information* Cristina Capineri, Muki Haklay, Haosheng Huang, Vyrion Antoniou, Juhani Kettunen, Frank Ostermann, Ross Purves, 2016-08-25 This book focuses on the study of the remarkable new source of geographic information that has become available in the form of user-generated content accessible over the Internet through mobile and Web applications. The exploitation, integration and application of these sources, termed volunteered geographic information (VGI) or crowdsourced geographic information (CGI), offer scientists an unprecedented

opportunity to conduct research on a variety of topics at multiple scales and for diversified objectives. The Handbook is organized in five parts, addressing the fundamental questions: What motivates citizens to provide such information in the public domain, and what factors govern/predict its validity? What methods might be used to validate such information? Can VGI be framed within the larger domain of sensor networks, in which inert and static sensors are replaced or combined by intelligent and mobile humans equipped with sensing devices? What limitations are imposed on VGI by differential access to broadband Internet, mobile phones, and other communication technologies, and by concerns over privacy? How do VGI and crowdsourcing enable innovation applications to benefit human society? Chapters examine how crowdsourcing techniques and methods, and the VGI phenomenon, have motivated a multidisciplinary research community to identify both fields of applications and quality criteria depending on the use of VGI. Besides harvesting tools and storage of these data, research has paid remarkable attention to these information resources, in an age when information and participation is one of the most important drivers of development. The collection opens questions and points to new research directions in addition to the findings that each of the authors demonstrates. Despite rapid progress in VGI research, this Handbook also shows that there are technical, social, political and methodological challenges that require further studies and research.

**Dioxygen-dependent Heme Enzymes** Masao Ikeda-Saito, Emma Raven, 2018-10-01 Aerobic organisms have evolved to utilise the intrinsic oxidising power of oxygen from the atmosphere. This so-called 'activation' of oxygen is often catalysed by a heme-containing enzyme. This book highlights the many and varied catalytic activities of O<sub>2</sub>-dependent heme-iron enzymes, including monooxygenases and cytochrome P450, dioxygenases, oxidases and model heme systems. Dioxygen-dependent Heme Enzymes will be a useful resource for postgraduate students and researchers in biochemistry and metallobiology working in, or moving into, research areas involving heme proteins.

**Coatings to Improve Optoelectronic Devices** Selected Articles Published by MDPI, 2020-04-09 This selection is focused on coatings and films with applications in optoelectronics, such as photovoltaics, photocatalysis, and light-based sensors and phenomena. The studies investigate the optimal composition, crystalline structure, and morphology to deliver the different functionalities sought. Obtaining transparent p-type electrodes is challenging but extremely relevant in optoelectronics. Electric conduction mechanisms and the correlations with structure and doping are discussed. The

important issue of the degradation pathways in perovskite-based solar cells and the possibilities offered by different types of coatings to encapsulate the devices as well as the beneficial effect of silica coating as an antireflection and antisoiling layer on well-established solar cells are discussed. New designs of nanoplasmonic films for chemical and biological molecule sensing are reviewed, such as the combination of metallic nanoparticles and nanostructured semiconductors and dispersing metallic or bi-metallic nanoparticles in CuO films. The impacts of structure, defects, and morphology on the photoactivated properties of WO<sub>3</sub> films and on the shape memory behavior in Cu-Al-Ni thin films are discussed. Aggregated TiO<sub>2</sub> nanoparticles on TiO<sub>2</sub> layers are shown to enhance optical transmittance and confer a superhydrophilic characteristic. Finally, aspects of the fundamental characterization of thin films, Drude damping in thin films, and laser-induced deflection technique are discussed.
