REDD+ achievements and challenges in Brazil Gallo, P., Brites, A., Micheletti, T., 2020-05-20 Key messages This Infobrief examines and discusses REDD+ achievements and challenges in Brazil for the period 2015–2019, reflecting the opinions of relevant actors within the REDD+ policy domain in the country. Over time, REDD+ initiatives have promoted changes in Brazilian political articulation, funding possibilities and mobilization of civil society, and brought more visibility to the importance of combating deforestation and forest degradation within the country. In terms of practical implementation, the national REDD+ framework is still quite limited. Further development of the national REDD+ strategy is a considerable challenge for Brazil, as it is becoming clearer that the current national political rhetoric does not consider fighting and controlling deforestation and climate change as government priorities. Several major challenges exist because weak forest resource governance, poor enforcement of the environmental legislation, social inequalities, land use conflicts, and lack of political commitment remain in the country's profile. However, international pressure on Brazil to stop deforestation might provide an opportunity for those actors who until now had little presence in the REDD+ political arena.

The Rough Guide to Brazil Clemmy Manzo, Kiki Deere, Stephen Keeling, Daniel Jacobs, 2014-10-01 The new, full-colour Rough Guide to Brazil is the definitive travel guide to this captivating country. In-depth coverage of its diverse wildlife, dynamic cities and exhilarating scenery - think lush rainforest, thundering waterfalls and the world's best beaches - takes you to the most rewarding spots, with stunning colour photography bringing everything to life. Discover Brazil's highlights: jaguar-spotting in the Pantanal wetlands; historic colonial towns; pearly-white beaches; the kaleidoscopic Rio Carnaval; Amazonian ecolodges; and the futuristic architecture of Brasília. Easy-to-use maps, reliable advice on how to get around and insider reviews of the best hotels, restaurants, bars, clubs and shops for all budgets ensure that you won't miss a thing. Causes of Deforestation of the Brazilian Amazon Sérgio Margulis, 2004 This report suggests that, in contrast to the 1970s and 1980s when occupation of Brazilian Amazonia was largely induced by government policies and subsidies, recent deforestation in significant parts of the region is basically caused by medium- and large-scale cattle ranching. Following a private rationale, the dynamics of the occupation process gradually became autonomous. Among the causes of the transformation are technological and managerial changes and the adaptation of cattle ranching to the geo-ecological conditions of eastern Amazonia which allowed for productivity gains and cost reductions. The fact that cattle ranching is

viable from the private perspective does not mean that the activity is socially desirable nor environmentally sustainable. Private gains need to be contrasted with the environmental (social) costs associated with cattle ranching and deforestation. It also is legitimate to argue that the private benefits from large-scale cattle ranching are largely exclusive, having contributed little to alleviate social and economic inequalities. However, decreases in the price of beef in national markets and increases in exports caused by the expansion of cattle ranching in Eastern Amazonia may imply social benefits that go beyond sectoral and regional boundaries. --Résumé de l'éditeur.

A Balancing Act for Brazil's Amazonian States Marek Hanusch, 2023-06-08 Social deprivations coincide with vast deforestation in Brazil's Legal Amazon, or Amazônia. Poverty reduction and sustainable development require renewed efforts to protect the region's exceptional natural wealth, coupled with a shift from an extractive to a productivity-oriented growth model.

Economics of Climate Change: The Contribution of Forestry Projects Wolfram Kägi, 2012-12-06 Climate change is one of the major global environmental problems, one that has the potential to confront us with great costs during the decades to come. Climate change is caused by emissions of greenhouse gases (GHGs) such as carbon dioxide (CO₂). As deforestation leads to CO₂ emissions and growing forests sequester CO₂, forestry projects provide us with options to mitigate CO₂ effects. This study analyses the contribution of forestry projects within the context of climate change. The contribution of forestry projects is here discussed on two levels. On a first level, the CO₂ effect of individual projects is analysed. On a second level, the study asks whether the analysis of forestry projects can contribute to questions on climate change which have been discussed in the economic literature during the past two decades. While most studies on forestry

projects focus on particular details, predominantly on technical issues, this study takes a rather broad perspective, drawing together different relevant aspects: the stability of international agreements is discussed, costs and benefits of reducing GHG emissions in industrial countries are reviewed, the underlying causes of deforestation are analysed and insights from resource economics are taken into consideration. Such a wide perspective allows the identification, discussion and appreciation of problems and opportunities associated with forestry projects in the context of climate change which are otherwise not recognised.

Challenges and Opportunities for the World's Forests in the 21st Century Trevor Fenning, 2013-12-03 This book addresses the challenges and opportunities faced by the world's forests posed by climate change, conservation objectives, and sustainable development needs including bioenergy, outlining the research and other efforts that are needed to understand these issues, along with the options and difficulties for dealing with them. It contains sections on sustainable forestry & conservation; forest resources worldwide; forests, forestry and climate change; the economics of forestry; tree breeding & commercial forestry; biotechnological approaches; genomic studies with forest trees; bio-energy, lignin & wood; and forest science, including ecological studies. The chapters are contributed by prominent organisations or individuals with an established record of achievement in these areas, and present their ideas on these topics with the aim of providing a ready source of information and guidance on these topics for politicians, policy makers and scientists for many years to come.

Opportunities And Limitations For Biotechnology Innovation in Brazil Luiz A.B. de Castro, Carlos A.L. Neri, Carlos Bloch Junior, Manoel O.de Moraes Filho, 2013-09-02 Brazil has emerged as a significant financial and industrial power in recent times. Brazil is poised to become a significant player in the field of biotechnology, internationally, by taking advantage of circumstances not available in other countries, particularly its native biodiversity. This will, in turn, have an effect on commercial and entrepreneurial opportunities in the region. Topics covered in this text include adjustments that must be made in the regulatory framework to assure the success of business investment. This investment is crucial for training R&D scientists and developing new technologies. The book also covers a debate on transgenic plants which had political ramifications in the region and slowed the adoption rate of genetically modified organisms by almost a decade. The opportunities for commercialization of recombinant DNA technologies in the country are also presented. Opportunities and Limitations For Biotechnology Innovation In Brazil presents a concise overview of the biotechnology industry in Brazil and will be of great interest to a wide range of readers including researchers, biotechnology graduates, as well as both local and international investors.

Managing a Global Resource Uma J. Lele, 2017-07-12 The rapid loss of tropical forests, particularly in the developing

world, has been a global concern since the late 1980s and has prompted a variety of international initiatives to save the forests. In 1991, the World Bank responded to global concerns and to criticism by nongovernmental organizations by forming a conservation-oriented forest strategy. Managing a Global Resource is an outgrowth of the independent evaluation conducted by the World Bank's Operations Evaluation Department and discusses how effectively that strategy was implemented. In this detailed investigation, Uma J. Lele explores why the loss of forests and biodiversity has been so rapid in some developing countries (Brazil, Indonesia, and Cameroon) and not in others (China, India, and Costa Rica). She assesses future prospects for conservation in these six countries by critically examining their policies, institutional arrangements, and emerging national and international instruments to conserve forests and biodiversity. Together these six countries account for 25 percent of the world's forest cover and 44 percent of the world's population. Managing a Global Resource presents case studies of the forest sectors of each country in the context of overall development policies, interest groups, and governance issues. Lele's investigation finds a fundamental divergence in forest-rich countries between the global objectives of conservation and the local objectives of development and private profit. In some forest-poor countries, in contrast, natural resource loss has led the countries on their own accord to adopt a variety of conservation-oriented policies and programs. Despite the greater congruence between the global and national objectives in these forest-poor countries, competing demands on their resources and the constraints on their policies, institutions, and human capital make it difficult for them to affect forest and biodiversity conservation. This volume makes it clear that

Brazilian Evangelicalism in the Twenty-First Century Eric Miller, Ronald J. Morgan, 2019-05-09 Over the past fifty years Brazil's evangelical community has increased from five to twenty-five percent of the population. This volume's authors use statistical overview, historical narrative, personal anecdote, social-scientific analysis, and theological inquiry to map out this emerging landscape. The book's thematic center pivots on the question of how Brazilian evangelicals are exerting their presence and effecting change in the public life of the nation. Rather than fixing its focus on the interior life of Brazilian evangelicals and their congregations, the book's attention is directed toward social expression: the ways in which Brazilian evangelicals are present and active in the common life of the nation.

21st-Century Statecraft Nayef Al-Rodhan, 2022-07-28 From civilisational frontier risks associated with new challenges like disruptive technologies, to the shifting nature of great-power conflicts and subversion, the 21st century requires a new approach to statecraft. In 21st-Century Statecraft, Professor Nayef Al-Rodhan proposes five innovative statecraft concepts. He makes the case for a new method of geopolitical analysis called 'meta-geopolitics', and for 'dignity-based governance'. He shows how, in an interdependent and interconnected world, traditional thinking must move beyond zero-sum games and focus on 'multi-sum and symbiotic realist' interstate relations. This requires a new paradigm of global security premised on five dimensions of security, and a new concept of power, 'just power', which highlights the centrality of justice to state

interests. These concepts enable states to balance competing interests and work towards what the author calls 'reconciliation statecraft'. Throughout, Professor Al-Rodhan brings his philosophical and neuroscientific expertise to bear, providing a practical model for conducting statecraft in a sustainable way.
