The creator of the asynchronous operation can then use a variety of ... *Can't import annotations from __future__* - [Stack Overflow](#) Oct 19, 2018 · This future feature is also missing in Python 3.6. std::promise and std::future in c++ - [Stack Overflow](#) Think of promise and future as creating a single-use channel for data. promise creates the channel, and eventually writes the data to it with `promise::set_value`. future connects to the channel, and `future::wait` reads and returns the data once it's been written. This function may block for longer than `timeout_duration` due to scheduling or resource contention delays. The standard recommends that a steady clock is used to measure the duration. **Ansible yum throwing future feature annotations is not defined** Sep 16, 2024 · The error: `SyntaxError: future feature annotations is not defined` usually related to an old version of python, but my remote server has Python3.9 and to verify it - I also added it in my inventory and I printed the `ansible_facts` to make sure. **std::future::get** - [cppreference.com](#) Feb 22, 2024 · The `get` member function waits (by calling `wait()`) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, `valid()` is false. *std::future::valid* - [cppreference.com](#) Aug 27, 2021 · Checks if the future refers to a shared state. This is the case only for futures that were not default-constructed or moved from (i.e. returned by

`std::promise::get_future()`, `std::packaged_task::get_future()` or `std::async()`) until the first time `get()` or `share()` is called. What is __future__ in Python used for and how/when to use it, ... Mar 2, 2016 · A future statement is a directive to the compiler that a particular module should be compiled using syntax or semantics that will be available in a specified future
