How do I fetch a branch on someone else's fork on GitHub? Closed 9 years ago. I've forked from a repo on GitHub. I want to get the code from a branch on another user's fork. Must I clone this user's whole repo to a separate local repo or can I do something like `git checkout link_to_the_other_users_branch?` **c - How does fork () work? - Stack Overflow** Dec 19, 2015 · 36 `fork()` duplicates the process, so after calling `fork` there are actually 2 instances of your program running. How do you know which process is the original (parent) one, and which is the new (child) one? In the parent process, the PID of the child process (which will be a positive integer) is returned from `fork()`. **What does it mean to fork on GitHub? - Stack Overflow** A fork is a copy of a project folder (repository) into your github account or onto your desktop if you use Github on your Desktop. This allows you to freely experiment with changes without affecting the original project. How to modify existing, unpushed commit messages? I wrote the wrong thing in a commit message. How can I change the message? The commit has not been pushed yet. How do I update or sync a forked repository on GitHub? Jul 8, 2016 · I forked a project, made changes, and created a pull request which was accepted. New commits were later added to the repository. How do I get those commits into my fork? What is the difference between `fork ()` and `vfork ()`? Nov 23, 2010 · This topic gives a good description of `fork`, `vfork`, `clone` and `exec`. Below are some often overlooked differences between `fork` and `vfork` I experienced on some Linux 2.6.3x embedded systems I worked with. Even with copy-on-write techniques, `fork` fails if you don't have enough memory to duplicate the memory used by the parent process. **What exactly does `fork` return? - Stack Overflow** Nov 2, 2016 · `Fork` creates a duplicate process and a new process context. When it returns a 0 value it means that a child process is running, but when it returns another value that means a parent process is running. What is the difference between Forking and Cloning on GitHub? A fork is just a request for GitHub to clone the project and registers it under your username; GitHub also keeps track of the relationship between the two repositories, so you can visualize the commits and pulls between the two projects (and other forks). How to get a new branch in my fork from the original repository? I forked a repo and the original repo has gotten a new branch after I forked it. OriginalRepo | +-BranchA | +-newBranch MyFork | +-BranchA I want to get the branch newBranch into... **c - What is the purpose of `fork ()`? - Stack Overflow** Jun 12, 2009 · In many programs and man pages of Linux, I have seen code using `fork()`. Why do we need to use `fork()` and what is its purpose?
