The Interplay of Stress, Health, and Well-being: Unraveling the Psychological and Physiological Processes - volume II Edgar Galindo, Adelinda Araujo Candeias, Mariola Bidzan, Konrad Reschke, Marcus Stueck, 2025-05-13 This Research Topic is the second volume of Research Topic The Interplay of Stress, Health, and Well-being: Unraveling the Psychological and Physiological Processes. Please, see the first volume here. This Research Topic explores the intricate

relationship between stress, health, and well-being, with a focus on the underlying psychological and physiological processes involved. The aim is to shed light on the complex interplay between these factors and provide insights into potential interventions and strategies for promoting optimal mental and physical well-being. It encompasses both theoretical perspectives and empirical research, emphasizing the need for interdisciplinary collaboration and a comprehensive understanding of stress, health and well-being:

The Impact of Chronic Stress on Physical Health: Examining the physiological processes through which chronic stress contributes to physical health problems, such as cardiovascular diseases, immune dysregulation, and metabolic disorders. Investigating the role of stress-related behaviors (e.g., poor sleep, unhealthy eating habits, sedentary lifestyle) in mediating the relationship between stress and physical health outcomes. Discussing potential interventions and preventive measures to mitigate the adverse effects of chronic stress on physical well-being.

Psychological Resilience and Mental Health: Analyzing the protective role of psychological resilience in buffering the negative impact of stress on mental health outcomes. Exploring the factors that contribute to the development and enhancement of resilience, such as positive emotions, cognitive flexibility, and social support networks. Evaluating evidence-based interventions and strategies aimed at promoting resilience and fostering mental well-being in the face of stressors.

Stress, Well-being, and Positive Psychology: Investigating the relationship between stress and subjective well-being, considering both hedonic well-being (e.g., life satisfaction, positive emotions) and eudaimonic well-being (e.g., sense of purpose, personal growth). Exploring the role of positive psychology interventions (e.g., gratitude exercises, mindfulness practices) in enhancing well-being and resilience, even in the presence of stress. Examining the potential long-term benefits of cultivating well-being as a protective factor against stress-related health problems.

The Role of Social Support and Community: Highlighting the importance of social support systems in moderating the effects of stress on health and well-being. Investigating the impact of social isolation and loneliness on stress-related health outcomes and well-being. Exploring community-based interventions and initiatives that promote social connectedness and resilience in the face of stress.

Individual Differences and Contextual Factors: Examining the influence of individual differences (e.g., personality traits, genetic predispositions) and contextual factors (e.g., socioeconomic status, cultural norms) on the stress-health-well-being relationship. Considering how these factors interact and shape individuals' responses to stress and their subsequent health and well-being outcomes. Discussing implications for personalized interventions and targeted approaches in stress management and well-being enhancement.

By investigating the psychological and physiological processes underlying the stress-health-well-being relationship, this Research Topic aims to contribute to a comprehensive understanding of these complex interactions. Ultimately, it provides a basis for developing effective interventions and strategies to promote optimal health, well-being, and resilience in the face of stressors.
