Hormonal Steroids V. H. T. James, J. R. Pasqualini, 2013-10-22 Hormonal Steroids contains the plenary and symposium lectures delivered to the Fifth International Congress on Hormonal Steroids held at New Delhi on October 30 to November 4, 1978. The plenary lectures include biochemical actions of trophic hormones and steroids on steroid production and spermatogenesis in testes; chemical reactions of steroids which imitate the selectivity of enzymatic transformations; and human chorionic gonadotrophin and ovarian and placental steroidogenesis. Symposia papers comprise of water-soluble steroidal anesthetics; quality control of radioimmunoassay of hormones in reproductive physiology; automation of steroid radioimmunoassay for clinical and research purposes; non-radioisotopic homogeneous steroid immunoassays; mechanisms involved in the regulation of steroid receptor levels; and metabolic effects of corticosteroid therapy in post-menopausal women.

The Complete Guide to Male Fertility Preservation Ahmad Majzoub, Ashok Agarwal, 2017-10-27 This comprehensive, multidisciplinary guide provides an up-to-date presentation of fertility preservation techniques with male cancer patients and other challenging conditions. Divided into four thematic sections, part one provides an overview of the pathophysiologic processes interrelating cancer and its treatment with infertility and discusses different methods of sperm preservation and fertility outcomes in cancer patients. Part two then explores male fertility preservation in various non-cancerous conditions, such as immunosuppressed, hypogonadal and transgender patients. The fundamental principles of cryobiology and sperm optimization are covered in part three, which also offers essential building blocks for scientists to develop a sperm banking service and implement high standards of practice. The final section describes the current practices of male fertility preservation along with its psychological impact on patients, and extends beyond to future innovative methods—tissue preservation, xenografting and artificial gametes—being researched and implemented in this field. Fertility preservation

among cancer patients and survivors is an evolving practice, which involves focused research and timely collaboration of professionals from related fields. The Complete Guide to Male Fertility Preservation is unique and original in its design and will appeal to a larger audience of andrologists, reproductive endocrinologists, urologists, embryologists, and all other clinicians practicing reproductive medicine and oncology.

Concise Dictionary of Pharmacological Agents I.K. Morton, Judith M. Hall, 2012-12-06 The purpose of this dictionary is to provide a convenient and affordable personal desk reference resource. The authors, who have many years experience in pharmacological research, teaching and editing, recognized a need for a single up-to-date volume encompassing material that hitherto could be gathered only from a well-stocked library. This book comprises two main sections: an A-Z listing of drugs and their properties; and a descriptive glossary of technical terms. The level and scope of this reference material will make it essential for pharmacologists and medicinal chemists, from the graduate student to established worker. It should also be valuable to workers in allied biomedical disciplines, such as biochemistry and physiology, medical students and science writers and editors. Scope The dictionary is centred on pharmacologically active agents. Workers in drug-related disciplines need to correctly identify individual agents from an arsenal of pharmacologically active compounds, each with a number of alternative drug names according to the country or naming convention.

Biochemical Actions of Hormones V14 Gerald Litwack, 2012-12-02 Biochemical Actions of Hormones, Volume XIV is a compendium of papers dealing with DNA regulatory elements, leukotriene receptors, hormonal regulation of sodium-proton exchange activity, the structure of the mammalian progesterone receptor, stimulus-response, and signaling systems. One paper analyzes the hormonal factors that regulate the kinetic properties of the plasma membrane Na⁺-H⁺ exchanger in epithelia and relates the control mechanisms to specific physiological function. Aqueous two-phase partitioning is a method that can be used in the study of steroid receptor activation and other conversions or interactions of steroid receptors. Using the two-phase partitioning, one can form a model of molecular changes during activation based on changes in the steroid receptor physico-chemical properties associated with the activation in vitro-phase. Another paper investigates the hypothesis that early androgenic modulation of nuclear effector-independent PKs is intimately related to the initial events in androgenic control of gene expression in the prostate. One paper describes the interaction between the estrogen receptor with DNA and the mechanism of transcription regulation by steroid receptors. Another paper reviews the role of GTP-binding proteins in receptor-mediated activation of phospholipase C, the formation and metabolism of novel inositol phosphates, as well as the possible role of protein kinase C in signal modulation. Micro-biologists, biochemists, molecular biologists, cellular biologists,

and investigators in the field of cell research will find this collection useful.
