The Two Million-Year-Old Self Anthony Stevens,1993 Also available in an open-access, full-text edition at <http://oaktrust.library.tamu.edu/handle/1969.1/85768> With the evolution of human consciousness, nature has finally become conscious of itself. It has taken eons of time, this lumbering progress through the minds of reptiles, mammals, and primates, and it is still working its purpose out in the archetypes of the collective unconscious encoded in the most ancient parts of the human brain. The recent evolutionary history of our species, which Jung personified as the two million-year-old human being in us all, is still active in our dreams, myths, psychiatric symptoms, traditional healing practices, and typical patterns of behavior. And it is still struggling to help us survive in the often alienating conditions of the modern world. Through a wide-ranging review of developments in anthropology, ethology, sociobiology, neuroscience, psycholinguistics, and Jungian psychology, Anthony Stevens explores the nature of the two million-year-old Self and examines ways in which the contemporary world both fulfills and frustrates its basic needs and intentions. Drawing on his experience as an analyst, Stevens evokes dreams and psychiatry to reveal a compelling and challenging view of the two million-year-old Self as embodying no less than the will of nature, providing ancient wisdom that we neglect at our collective peril. By granting close attention to nature's mind, Stevens argues, we not only further personal wholeness but help redress the gross imbalances of our culture, which are threatening the destruction of the earth. For the ecologically concerned, this book offers a dramatic new perspective on our future relations with our planet.

Senèze: Life in Central France Around Two Million Years Ago Eric Delson,Martine Faure,Claude Guérin,2025-04-09 The paleontological site of Senèze (Haute Loire, central France) was discovered in 1892 inside a volcanic crater. For over 40 years, local peasant Pierre Philis collected fossils and sold them to French and Swiss museums. The site became world-famous for its well-preserved skeletons of ungulates and carnivores, as well as rare but well-preserved remains of primates and other mammals. It is considered the reference fauna for the late Villafranchian and MNQ 18 biochronological units of

European mammalian evolution, but the lack of provenance data made modern research difficult. From 2000-2006, the multidisciplinary Franco-American Senèze Research Project undertook five seasons of major fieldwork, with the goals of clarifying the age, stratigraphy and taphonomy of Senèze, as well as finding additional remains, especially of the less well-known taxa. In this volume, following a history of study and summary of the new fieldwork, four geological chapters consider field methods, stratigraphy, volcanology and dating. Combining argon-argon ages and paleomagnetic calibration, the newly recovered fossils are shown to date between 2.20 and 2.08 Ma, with concentrations ca. 2.20-2.18 and 2.10-2.08 Ma, significantly older than previously thought. Chapters on palynology, ichthyology and ornithology are followed by eight chapters on the fossil mammals. The chapter on biochronology places Senèze among other sites at the start of MNQ 18, which is estimated to end ca. 1.7 Ma. Of some 2200 specimens known from the site, over half are cervids, with bovids, rhinocerotids and equids far behind. According to data from palynology and the habitat preferences of the more common mammals, the paleoenvironment around the Senèze maar would have included forest, woodland and grassland, perhaps in a warmer and moister climate than today. Taphonomic studies revealed that bones often rested a long time under water, lacked any indication of carnivore attack and often displayed pathologies in their joints. It is likely that most of the associated skeletons were preserved undisturbed after large mammals fell into the paleolake and drowned without being able to climb out. This book responds to the long-held desire of later Cenozoic paleontologists to see a modern study of a site recognized worldwide as a biochronologic reference for the Plio-Pleistocene. Our study required renewed fieldwork using up to date techniques of topography, sedimentology, stratigraphy, geochronology and taphonomy. The systematic paleontology chapters are based on re-study of the entire body of Senèze fossils collected during more than a century of research. The volume will be of interest to paleontologists, especially those concerned with the evolution of the European fauna and with the taxa studied, as well as with paleoenvironmental reconstruction and biogeography. It will also be of value to mammalogists interested in analyses of near-modern taxa and to paleoanthropologists, archaeologists and taphonomists interested in the methods utilized and the role of Senèze as a comparative standard for a site of this age without human intervention. It will surely be an essential reference for all those who want to know more about Life in Central France Around Two Million Years Ago.

Act and Image Warren Colman, 2021-09-30 How did humans develop the capacity for symbolic imagination? In this ground-breaking book, Warren Colman provides a reformulation of archetypal symbols as emergent from humans' embodied and affective engagement with their social and material environment. Beginning with the oldest known figurative image in

the world, the 40,000-year-old Lion Man of Hohlenstein-Stadel in Germany, he traces the emergence of symbolic imagination through the origins of language, the growth of human sociality and co-operation, and the creative use of material objects, from the earliest stone tools through the cave paintings and figures of Upper Paleolithic Europe and beyond. This leads to a consideration of how the imaginal world of the spirit may have come into being, not as separate from the material world but through active participation within a world alive with meaning.

Indianapolis Jeffrey Tenuth,2005-10 With its selection as Indiana's capital in 1821, Indianapolis was destined to become a major Midwestern hub. Through the decades that followed, the Circle City led Indiana into its golden age, when the state was one of the largest industrial and agricultural producers in the nation. Forced to reinvent itself after the decline of heavy industry, Indianapolis now supports a diverse technology- and service-based economy and proudly proclaims itself the amateur sports capital of the world.

The Origin and Early Evolution of Life Tom Fenchel,2002 Origin and Early Evolution of Life draws on evidence from molecular genetics, the structure and function of extant organisms, and geology. It covers the period from about 4 billion years ago, when life is thought to have originated, to about 600 million years ago when multicellular organisms first arose. There are significant gaps in our understanding of the earliest evolution of life forms, but an insight into the topic leads to a more profound understanding of life itself. Particular emphasis is placed on the fact that although life arose very soon after the origin of the Earth, it was represented only by simple microbial life forms for approximately 85% of this time. Increase in complexity beyond the microbial level took place only very late in the history of life.

The Frontal Lobes Jarl Risberg,Jordan Grafman,2006-11-13 The frontal lobes and their functional properties are recognised as crucial to establishing our identity as autonomous human beings. This book provides a broad introductory overview of this unique brain region. In an accessible and readable style it covers the evolutionary significance of the frontal lobes, typical and atypical development pathways, the role played in normal cognition, memory and emotion, and in damaged states, resulting in a range of neurological syndromes and psychiatric disturbances. The coverage integrates current theoretical knowledge with observations of both normal and disturbed behaviour across the lifespan. The result is an easy to read review of this fascinating and involved field suitable for graduate students in neuropsychology and psychology, clinicians from the fields of neurology, neurosurgery or psychiatry, and researchers engaged in neuroscientific investigations.

Sex Is a Spectrum Agustín Fuentes,2025-05-06 Why human biology is far more expansive than the simple categories of female and male Being human entails an astonishingly complex interplay of biology and culture, and while there are important differences between women and men, there is a lot more variation and overlap than we may realize. *Sex Is a Spectrum* offers a bold new paradigm for understanding the biology of sex, drawing on the latest science to explain why the binary view of the sexes is fundamentally flawed—and why having XX or XY chromosomes isn't as conclusive as some would have us believe. In this lively and provocative book, leading biological anthropologist Agustín Fuentes begins by tracing the origin and evolution of sex, describing the many ways in the animal kingdom of being female, male, or both. Turning to humans, he presents compelling evidence from the fossil and archaeological record that attests to the diversity of our ancestors' sexual bonds, gender roles, and family and community structures, and shows how the same holds true in the lived experiences of people today. Fuentes tackles hot-button debates around sports and medicine, explaining why we can acknowledge that females and males are not the same while also embracing a biocultural reality where none of us fits neatly into only one of two categories. Bringing clarity and reason to a contentious issue, *Sex Is a Spectrum* shares a scientist's perspective on why a binary view of sex and gender is not only misguided but harmful, and why there are multitudes of ways of being human.
