Wood-Plastic Composites Anatole A. Klyosov, 2007-10-12 A comprehensive, practical guide to wood-plastic composites and their properties This is the first book that presents an overview of the main principles underlying the composition of wood-plastic composite (WPC) materials and their performance in the real world. Focusing on the characteristics of WPC materials rather than their manufacture, this guide bridges the gap between laboratory-based research and testing and the properties WPC materials exhibit when they're used in decks, railing systems, fences, and other common applications. Complete with practical examples and case studies, this guide: Describes compositions of WPC materials, including thermoplastics, cellulose fiber, minerals, additives, and their properties Covers mechanical properties, microbial resistance, water absorption, flammability, slip resistance, thermal expansion-contraction, sensitivity to oxidation and solar radiation, and rheological properties of hot melts of WPC Covers subjects that determine esthetics, properties, performance, and durability of wood-plastic composite products Includes comparisons of different ASTM methods and procedures that apply to specific properties This is a comprehensive, hands-on reference for scientists, engineers, and researchers working with wood-plastic composites in plastics and polymers, materials science, microbiology, rheology, plastic technology, and chemical engineering, as well as an outstanding text for graduate students in these disciplines. It's also an excellent resource for suppliers and WPC manufacturers, and an accessible guide for developers, homebuilders, and landscape architects who want to know more about wood-plastic composites and their performance in the real world.

Handbook of Bioplastics and Biocomposites Engineering Applications Srikanth Pilla, 2011-07-20 This Handbook is the first to explore the extensive applications made with bioplastics & biocomposites for the packaging, automotive, biomedical, and construction industries. Bioplastics and biocomposites are becoming increasingly prominent because synthetic plastics and glass fiber composites are neither sustainable nor environmentally friendly. The Handbook of Bioplastics and Biocomposites Engineering Applications brings together scientists from academia and industry to report on current research and applications in the bioplastics and biocomposites arena. This new science is interdisciplinary and integrates pure and applied sciences such as chemistry, engineering and materials science. The Handbook focuses on five main categories of applications: Packaging; Civil Engineering; Biomedical; Automotive; General Engineering. The majority of the chapters review the properties, processing, characterization, synthesis and applications of the bio-based and biodegradable polymers and composites including: Polymers such as polylactic acid (PLA), polyhydroxybutyrate (PHB), guar gum based plastics, cellulose polyesters, starch based bioplastics, vegetable oil derived bioplastics, biopolyethylene, chitosan, etc. Thermoplastic and thermosetting bioplastics and biocomposites with a focus on the automobile industry. The ways how to improve the properties of bioplastics, polymer blends, and biocomposites by combining them with both synthetic and natural fillers and reinforcements such as nanoclays, nanotubes (CNTs), and natural fibers (both wood and plant fibers). Studies that expand the boundaries of bioplastics that will allow for the new materials to be applied to most generic engineering applications. The Handbook will be of central interest to engineers, scientists and researchers who are working in the fields of bioplastics, biocomposites, biomaterials for biomedical engineering, biochemistry, and materials science. The book will also be of great importance to engineers in many industries including automotive, biomedical, construction, and food packaging.

Wonder Wood Barbara Glasner, Stephan Ott, 2013-01-30 Wonder Wood presents this timeless material as it is being used today and how it can be used in the future. It also documents a selection of current international projects and processes, making-ofs, and experiments by 120 internationally renowned designers, architects, and artists, whose creative and innovative approach to the material makes their work compelling. For selected projects, interviews with the designers provide an in-depth look at the creative process and its results. A second section, dedicated to materials and technologies

examines innovative developments as well as wood, wood-based materials, finishing technologies, and wooden structure principles. With biographies of the designers represented in the book, an alphabetical index, a bibliography and sources, Wonder Wood will serve the reader as a classic book of reference.

Wood-Polymer Composites K O Niska, M. Sain, 2008-05-29 Wood-polymer composites (WPC) are materials in which wood is impregnated with monomers that are then polymerised in the wood to tailor the material for special applications. The resulting properties of these materials, from lightness and enhanced mechanical properties to greater sustainability, has meant a growing number of applications in such areas as building, construction and automotive engineering. This important book reviews the manufacture of wood-polymer composites, how their properties can be assessed and improved and their range of uses. After an introductory chapter, the book reviews key aspects of manufacture, including raw materials, manufacturing technologies and interactions between wood and synthetic polymers. Building on this foundation, the following group of chapters discusses mechanical and other properties such as durability, creep behaviour and processing performance. The book concludes by looking at orientated wood-polymer composites, wood-polymer composite foams, at ways of assessing performance and at the range of current and future applications. With its distinguished editors and international team of contributors, Wood-polymer composites is a valuable reference for all those using and studying these important materials. - Provides a comprehensive survey of major new developments in wood-polymer composites - Reviews the key aspects of manufacture, including raw materials and manufacturing technologies - Discusses properties such as durability, creep behaviour and processing performance

Recent Advances in the Processing of Wood-Plastic Composites Jin Kuk Kim, Kaushik Pal, 2010-12-16 Wood-plastic composite (WPC) is a non-recyclable composite material lumber or timber made of recycled plastic and wood wastes which has become one of the most dynamic sectors of the plastics industry in this decade. It is used in numerous applications, such as, outdoor deck floors, railings, fences, landscaping timbers, park benches, window and door frames. This book starts with a brief glimpse at the basic structures and properties of WPCs. Aspects such as surface treatment, machinery used and testing types of WPCs are also covered. The following chapters of the book give a view of foam technology, flame retardant properties and colour retardant properties of WPCs. The way morphology affects or controls the physical and mechanical behaviours of the finished materials is discussed. Finally, the authors give an overview of the applications of wood-plastic composites in daily life. The book may serve as a source book for scientists wishing to work in this field.

Stoffliche Nutzung nachwachsender Rohstoffe Oliver Türk,2013-12-05 Die stoffliche Nutzung nachwachsender Rohstoffe wird in der ganzen Breite aller Stoffe dargestellt und dazu nach chemischen Stofffamilien gegliedert. Dabei werden das Vorkommen in der Natur bzw. die Herstellung der Materialien, Struktur und Eigenschaften, Anwendungen sowie ökonomische und ökologische Aspekte behandelt und damit eine ganzheitliche Darstellung des Gebietes gegeben. Eine umfangreiche Einleitung und die schwerpunktartige Vertiefung verschiedener Fragestellungen in den jeweiligen Materialkapiteln zeigen die komplexen Randbedingungen denen dieses Technikfeld unterworfen ist.

Charakterisierung von Holz- und Naturfasern Burkhard Plinke,Sören Fischer,Holger Fischer,Nina Graupner,Jörg Müssig,2023-11-28 Charakterisierung von Holz- und Naturfasern Charakterisierung von Holz- und Naturfasern: Eine praxisbezogene Einführung für die Werkstoffentwicklung bietet zum ersten Mal eine umfassende Einarbeitung in das komplexe Themengebiet der Faseranalytik. Die Entwicklung moderner und fortgeschrittener Faserverbundwerkstoffe ist von großer Bedeutung, da sie den Anforderungen an Wirtschaftlichkeit, Ökologie und Funktionalität gerecht werden und vielseitig in Bereichen wie z.B. Kunststoff, Fahrzeuge, Luft- und Raumfahrt eingesetzt werden. Das steigende Interesse an neuen Werkstoffen macht ein gründliches und ausführliches Verständnis der Interaktionen von Faser-Matrix-Systemen und detaillierte Betrachtungen der verwendeten Fasern durch angemessene Analysemethoden und Auslegung der Messergebnisse unerlässlich, um präzise Vorhersagen über Eigenschaften der Verbundwerkstoffe machen zu können. Neben den wichtigsten Herstellungsverfahren von Werkstoffen aus Holz- und Naturfasern, sowie den entsprechenden Grundlagen und Normen, werden wichtige Analyseverfahren anwendungsbezogen beschrieben. Im Focus stehen besonders bild-gebende Methoden und die entsprechenden, am Markt etablierten Analysegeräte, die zur morphologischen Charakterisierung der Fasern eingesetzt werden. Dabei werden nicht nur Anwendungsbeispiele mit praktischer Relevanz betrachtet, sondern auch die Simulation und Modellierung zur Vorhersage von möglichen Faserstrukturen. An diversen Praxisbeispielen werden die Methoden der Faseranalytik anwen-dungsbezogen und verständlich erläutert. Von den Grundlagen über die Methoden bis hin zu den Praxisbeispielen—gut strukturiert wird den Leser:innen alles Wissenswerte über die Charakteri-sierung und Analyse von Fasern vermittelt. Ein schneller Einstieg in die Methoden der modernen Faseranalytik: Das Buch unterstützt den Anwender bei der Durchführung der Verfahren und der Interpretation der Analysenergebnisse. Wood Plastic Composites and Plastic Lumber T. N. Reynolds, 2004 Wood plastic composite (WPC) is a term which refers to a composite containing wood in any form, combined with either thermoplastics (which can be re-melted) or thermoset

plastics (which cannot be re-melted once set). Thermoplastics include polyethylene and polypropylene which are used in numerous non-structural applications, such as bottles and containers. Thermoset plastics are formed from resins such as polyester and epoxy. Solid recycled plastic lumber (RPL), which is usually made from waste plastics without any wood or fibre element, also competes in this non-structural role. This Digest describes the manufacture of several types of WPC and their strength, stiffness and durability. Although their strength is low in comparison with timber, WPCs have been used for decking and bridges. Their properties are compared with those of fibre reinforced polymers (FRPs).

Wood Plastic Composites Nafish Sarwar Islam, 2011-10 Natural fibres are promising reinforcement to be used in thermoplastic composites due to their low weight and cost. The major usage of plastic composites is in transportation followed by the combined usage in marine and corrosive environments. However, the stability of wood plastic composite in corrosion and marine environment is not well understood. Manufacturers mostly rely upon some limited laboratory tests whose methodologies are useful for simulations but not for predicting product's service properties. An investigation has been carried out to assess the properties of rubber wood fibre reinforced polypropylene composites; and environment stability of these composites has been studied at three different temperatures. ---- Nafish Sarwar Islam.
