Alan F. Chalmers

¿Qué es esa cosa llamada ciencia? Alan F. Chalmers, 2023-04-28 Esta accesible exposición de los intentos científicos modernos por destronar el pensamiento empirista se ha convertido, en el transcurso de los últimos veinticinco años, en un éxito de ventas a la vez que el texto universitario de referencia, traducido a más de quince lenguas. Las grandes teorías de la Filosofía de la ciencia del siglo pasado -el falsacionismo, los paradigmas de Kuhn, la teoría anarquista de la ciencia de Feyerabend, los movimientos realistas y antirrealistas- están explicadas con acierto, utilizando un mínimo de terminología técnica. La presente edición, revisada y ampliada, presenta un tratamiento conciso y esclarecedor de los desarrollos más importantes ocurridos en este campo durante las dos últimas décadas, y confirma su reputación de ser el mejor libro de texto de introducción a la Filosofía de la ciencia.

Pensamiento Contemporáneo Oscar Moreno, 2008-11-27 Los debates que se presentan en este libro son el resultado de un trabajo que, desde hace varios años, se viene desarrollando en la asignatura Principales Corrientes del Pensamiento Contemporáneo de la Carrera de Ciencias de la Comunicación Social (Facultad de Ciencias Sociales, Universidad de Buenos Aires). Ellos recuperan algunas de las preocupaciones que aparecen, de un modo recurrente, en gran parte del pensamiento social y político de la convulsionada época contemporánea. El punto de partida para la construcción y el desarrollo de dos paradigmas de interpretación, cuya importancia fue decisiva para interpretar el siglo XX, se encuentra en los pensamientos de Karl Marx y Max Weber.

La Investigación en Ciencias Sociales ,2013-10-17 El tercer libro de la colección. Las discusiones sobre la filosofía de las ciencias sociales han estado tradicionalmente ligadas a las que se han suscitado en las ciencias naturales y en tiempos más recientes a su reconstrucción como disciplinas independientes. Las preguntas que se han discutido tienen que ver con su carácter científico : ¿Son ciencias o pseudociencias?, ¿están éstas en un estado paradigmático?, ¿aspiran a compartir el mismo método de las ciencias naturales?, ¿la manera de investigar y explicar los asuntos sociales es diferente y lo que se pretende es más la comprensión de los asuntos sociales y menos la explicación y la predicción? O, por el contrario, ¿se pueden formular leyes para los fenómenos sociales?

El psicoanálisis en diálogo con la epistemología Uribe Cano, Juan Manuel,2018-10-31 Si no se puede revisar el psicoanálisis con las herramientas propias de la ciencia, con las epistemologías y sus criterios de validación, no podrá decirse que se eleve por encima del estatuto de un saber pseudocientífico, religioso y lleno de vericuetos propios de saberes gnósticos, de los saberes para iniciados y constituidos desde cenáculos diferentes a los centros de la ciencia y la universidad. Muchas preguntas se suceden de este hecho: ¿las investigaciones que se adelantan en el campo del psicoanálisis son de carácter científico? ¿Existe la posibilidad de que una investigación con el psicoanálisis se llame científica? ¿Se puede trabajar científicamente en psicoanálisis? En fin, podrían hacerse muchas otras preguntas al respecto; empero, de lo que se trata es de saber si el psicoanálisis, como un saber bien constituido, puede o no elevarse a la condición de un programa de investigación científica.

La formación de conceptos en ciencias y humanidades Pablo González Casanova,Marcos Roitman Rosenmann,2006-01-01 Concepto es término latino y está asociado al hecho de engendrar ideas: el ser humano es capaz de formar conceptos. de concebir o crear ideas. Así, el verbo que subyace en el sustantivo concepto es capio, is, que en español dió capturar. Al formar conceptos, el hombre engendra, captura o concubre ideas: señala límites, marca fronteras y separa un objeto conceptual de otro. Así ha sucedido desde Grecia hasta hoy.

Lobatón,2021-12-06 Este libro representa un nuevo hito en la consolidación de los estudios sobre comunicación, ciencia y cultura en América Latina ya que articula un extenso intercambio de voces expertas que nutren la reflexión y el debate colectivo sobre el conocimiento tecnocientífico y su comunicación pública. En este quinto volumen de la colección De la academia al espacio público, se evidencian los modos en que la comunicación pública de la ciencia se ha desplazado del conocimiento científico en sí mismo, para centrarse en la comprensión y puesta en común de las muy complejas y diversas problemáticas que impactan la vida social y natural. El libro recoge experiencias investigativas pedagógicas y didácticas desde escenarios situados en Brasil, México y Colombia, que entrelazan marcos conceptuales de orden epistemológico, antropológico, histórico y sociológico de las ciencias naturales en contextos específicos. Los profesores de ciencias naturales van a encontrar una posibilidad de conectarse, reencontrarse y repensarse no solo con sus conocimientos disciplinares, pedagógicos, didácticos, también con sus experiencias particulares, expectativas personales, para situarlas en sus comunidades escolares, con el ánimo de abrir espacios que les permita considerar la ciencia como una construcción humana, parte de la cultura, como una posibilidad, como un camino para educar para la vida y la ciudadanía.
