Human Milk and Lactation Maria Lorella Gianni, 2020-05-28 Human milk is uniquely tailored to meet infants' specific nutritional requirements. However, it is more than just "milk". This dynamic and bioactive fluid allows mother-infant signalling over lactation, guiding the infant in the developmental and physiological processes. It exerts protection and life-long biological effects, playing a crucial role in promoting healthy growth and optimal cognitive development. The latest scientific advances have provided insight into different components of human milk and their dynamic changes over time. However, the complexity of human milk composition and the synergistic mechanisms responsible for its beneficial health effects have not yet been unravelled. Filling this knowledge gap will shed light on the biology of the developing infant and will contribute to the optimization of infant feeding, particularly that of the most vulnerable infants. Greater understanding of human milk will also help in elucidating the best strategies for its storage and handling. The increasing knowledge on human milk's bioactive compounds together with the rapidly-advancing technological achievements will greatly enhance their use as prophylactic or therapeutic agents. The current Special Issue aims to welcome original works and literature reviews further exploring the complexity of human milk composition, the mechanisms underlying the beneficial effects associated with breastfeeding, and the factors and determinants involved in lactation, including its promotion and support.

Handbook of dietary and nutritional aspects of human breast milk Sherma Zibadi, Ronald Ross Watson, Victor R. Preedy, 2023-08-07 Breast feeding has a great impact on the growth of infants both physically and psychologically. Human breast milk is beneficial to infant health because it contains the necessary macro- and micro-nutrients for tissue accretion, repair and behavioural developments. The production of milk is a complex biological process and its composition and volume is dependent upon a variety of factors such as the health and dietary status of the mother. Moreover, it is influenced by the different stages and duration of breast feeding. Environmental factors, both global and local, may also alter lactation, milk

composition and nutritional value. This handbook provides a unique and complete insight into the dietary and nutritional aspects of human breast milk. For a general understanding an overview is given of breast structure and function and lactation. Nutritional aspects are highlighted in a section on the composition of breast milk, including recent research results on breast milk and growth factors, vitamins, proteins and antigens, amongst others. Finally an analysis of both the beneficial and adverse factors relating to lactation and composition of breast milk are discussed.

Nordic Nutrition Recommendations 2012. Part 4 - -, 2014-03-06 NNR2012 Part 4: Food, food patterns and health: Guidelines for a healthy diet, breastfeeding, sustainable food consumption and dietary antioxidants The Nordic countries have collaborated in setting guidelines for dietary composition and recommended intakes of nutrients for several decades through the joint publication of the Nordic Nutrition Recommendations (NNR). This 5th edition, the NNR 2012, gives Dietary Reference Values (DRVs) for nutrients, and compared with earlier editions more emphasis has been put on evaluating the scientific evidence for the role of food and food patterns contributing to the prevention of the major diet-related chronic diseases. Recommendations on physical activity are included and interaction with physical activity has been taken into account for the individual nutrient recommendations wherever appropriate. A chapter on sustainable food consumption has been added. A Nordic perspective has been accounted for in setting the reference values. The NNR 2012 has used an evidence-based and transparent approach in assessing associations between nutrients and foods and certain health outcomes. Systematic reviews form the basis for the recommendations of several nutrients and topics, while a less stringent update has been done for others. The systematic reviews and individual chapters have been peer reviewed and the systematic reviews are published in the Food & Nutrition Research journal. The draft chapters were subject to an open

public consultation. Recommendations have been changed only when sufficient scientific evidence has evolved since the 4th edition. The primary aim of the NNR 2012 is to present the scientific background of the recommendations and their application. A secondary aim is for the NNR 2012 to function as a basis for the national recommendations that are adopted by the individual Nordic countries.

Evidence-Based Research in Pediatric Nutrition H. Szajewska, R. Shamir, 2013-09-12 Recognition of evidence-based medicine is not only increasing rapidly, but it has become essential to pediatric nutrition. Starting with some methodological issues - discussing systemic reviews, meta-analyses and clinical trials - this publication then concisely summarizes current knowledge as well as ignorance and uncertainty regarding selected aspects of childhood nutrition. These aspects include functional gastrointestinal disorders, issues concerning various kinds of milk, complementary foods, enteral nutrition, celiac disease or obesity. Contents are based on evidence and summarize current guidelines; moreover, when there is no clear evidence, they provide some food for thought.

Drivers of Innovation in Pediatric Nutrition Berthold Koletzko, Sibylle Koletzko, Frank Rümmele, 2010 When developing a new product, many obstacles have to be overcome from the idea to the shelf: know-how from different subject areas is called for to create a product that is not only technically feasible, but also complies with regulations and meets

consumer needs and preferences. This book addresses and tries to identify forces that potentially drive innovation in pediatric nutrition, an endeavor which surpasses research, clinical and academic thinking. The likelihood of translating innovative research concepts into practical applications depends on a large number of factors; Clinical studies, adherence to regulatory standards and environments of various countries, policy and politics on child health and nutrition, marketing issues, economic considerations as well as the state of food technology all determine whether and how a product can be brought to the market. Expectations and response of both consumers and health care professionals are likewise of very high importance. Due to its broad scope, this publication is of interest to everyone involved in one way or another in the development and launch of new products for pediatric nutrition.
