**Metabolic Confusion Diet: The Easy Beginners Guide to Increasing Metabolic Rate For Weight Loss Including a 7-Day Meal Plan and Mouth-Watering H** Ben Smith, 2021-04-08 Metabolic confusion also known as calorie cycling or calorie confusion is an eating plan that is designed to trick your metabolism into working smarter for faster weight loss results. This involves alternating the calories you consume daily. Our bodies do not work in the same way because they are different. This explains why some diets work for some people but don't work for others. Our metabolism has a lot to say about that; how you lose weight and how successfully you achieve it. Unlike many of us, some people have supercharged

metabolism and they can eat whatever they want without worrying about weight gain. The reason is that their bodies burn the calories they consume at a much faster rate. Unfortunately for some of us, we put on weight at the slightest of eating anything we want. Correct eating habit is a very easy way to rebuild your metabolism. Metabolic confusion is an eating pattern that is best known for its simplicity, unlike conventional diets like low-calorie diets. Eating right helps you to boost your metabolism and leads to weight loss. This is why it is important that you try to 'confuse' your metabolism by altering your eating pattern to reset your metabolism, which makes it hard for you to stop losing weight. *Overtraining Syndrome in Athletes* Flavio Cadegiani, 2020-09-24 This book discusses major changes in our understanding of the most prevalent non-orthopedic, sports-related condition – overtraining syndrome (OTS), arguing that it should be considered as the manifestation of burnout in athletes, rather than simply the result of excessive training. While the chronic adaptations of the cardiovascular and musculoskeletal systems to exercise are well documented, those of the endocrine system are less well known, and adaptations of the hormonal ranges for athletes are yet to be determined. There is also a lack of standardized diagnostic criteria, consistent assessment methods and biomarkers. This book offers a systematic review of the hormonal aspects of overtraining syndrome, and a comparison with sports-related syndromes triggered by chronic deprivation of different sorts, including the female athlete triad (and its derivative, RED-S) and burnout syndrome of the athlete (BSA). It demonstrates that these conditions, although studied separately from each other, may all be different manifestations of the same condition, leading to ‘maladaptive’ (dysfunctional forced adaptations to a hostile environment) changes in response to chronic depletion of energy and mechanisms of repair, causing multiple dysfunctions. The author proposes that OTS/Paradoxical Deconditioning Syndrome (PDS), RED-S/TRIAD and BSA are parts of a same condition, or at least a group of similar conditions. Further, the book offers a chronological overview of OTS, based on preliminary research. Given its broad scope, this concise reference book will appeal to a range of health professionals. It allows readers, including those without a strong academic background, to gain a systematic understanding of OTS.
