**Die weiße Mafia** Frank Wittig, 2013-02-08 In unserem Gesundheitssystem herrschen mafiöse Verhältnisse. Um den Profit der Ärzte und der Gesundheitsindustrie zu sichern, werden überflüssige Operationen durchgeführt und Medikamente verschrieben, die mehr schaden als nutzen. Gesunde werden zu Kranken erklärt, weil Laborwerte willkürlich festgelegten Normen nicht entsprechen oder Röntgenbilder völlig unbedenkliche Abweichungen vom Ideal zeigen. Die industrienahe medizinische Selbstverwaltung weigert sich, auf wissenschaftliche Erkenntnisse zu reagieren, und verhindert so den

Fortschritt - vor allem, wenn die Wissenschaft gut etablierte Geschäftsmodelle bedroht. Der mehrfach preisgekrönte Wissenschaftsjournalist Frank Wittig recherchiert seit vielen Jahren im Medizinbetrieb und ist dort auf skandalöse Zustände und eine weiße Mafia aus Ärzteschaft und Industrie gestoßen, die sich gnadenlos an Gesunden und Kranken bereichert. Wittig deckt auf, wo es krankt im System, und gibt Hinweise, wie wir als Patienten beim Kontakt mit Medizinern das Risiko verringern, Opfer der weißen Mafia zu werden. Ein Buch, das anklagt, aufrüttelt und aufklärt. Denn Erkenntnis ist der erste Weg zur Besserung - des Systems und der eigenen Gesundheit.

**Einführung von medizintechnischen Innovationen im Krankenhaus** Panteli, Dimitra,Henschke, Cornelia,Eckhardt, Helene,Busse, Reinhard,2023-01-17 Die Anwendung von neuen Untersuchungs- und Behandlungsmethoden (NUB) im stationären Sektor bleibt auch nach der Einführung einer frühen Nutzenbewertung für bestimmte Medizinprodukte hoher Risikoklassen ein kontroverses Thema der gesundheitspolitischen Debatte. Es gilt eine Balance zu finden zwischen dem Zugang zu innovativen Methoden, der Sicherstellung des Nutzens sowie der Finanzierbarkeit durch die gesetzliche Krankenversicherung. Schwächer ausgestaltete Zulassungskriterien für Medizinprodukte im Vergleich zu Arzneimitteln erfordern ein Nachsteuern, wenn es darum geht Medizinprodukte in der Regelversorgung anzuwenden. Das übergreifende Ziel der Studie ist, die Bedeutung wissenschaftlicher Evidenz bei der Einführung und Verbreitung von NUB in deutschen Krankenhäusern zu untersuchen. Aufbauend auf einer systematischen Vorgehensweise werden kriterienbasiert 27 versorgungsrelevante NUB identifiziert. Für diese werden die Entwicklungen der Evidenz hinsichtlich Wirksamkeit und Sicherheit sowie die Entwicklung der Fallzahlen in anwendenden Krankenhäusern longitudinal (2005-2017) analysiert. Wissenschaftliche Publikationen werden systematisch identifiziert, selektiert und ausgewertet, um eine Übersicht zu schaffen, welche Evidenz zu welchem Zeitpunkt des Anwendungsgeschehens vorlag. Weitere Faktoren wie Finanzierungsänderungen und Sicherheitswarnungen werden in der Analyse berücksichtigt. Zudem werden die Versorgungs-

und Forschungsaktivitäten deutscher Krankenhäuser erfasst und deskriptiv ausgewertet. Ein Zusammenhang zwischen Diffusion und Evidenzentwicklung kann für ca. die Hälfte der untersuchten Methoden vermutet werden. Für die restlichen Methoden ist entweder nicht genügend Evidenz vorhanden, sind die Fallzahlen zu gering, um einen Zusammenhang abzuleiten, oder die Fallzahl- und die Evidenzentwicklung weisen eine entgegengesetzte Richtung auf. In der Stichprobe dauert es von der Marktzulassung bis zur ersten Veröffentlichung der ersten Ergebnisse einer randomisiert klinischen Studie bis zu zehn Jahre. Ein robuster Evidenzkörper liegt für die Mehrheit der Methoden erst nach mehreren Jahren der Anwendung vor oder entsteht überhaupt nicht im betrachteten Zeitraum. Hinsichtlich der Finanzierung bestätigt die Studie die Kenntnis, dass NUB mehrere Jahre in der Systematik zeitlich befristeter Entgelte verweilen, ohne dass ein Nutzen nachgewiesen ist. Die Notwendigkeit, jährlich NUB-Anträge für eine Finanzierung zu stellen, scheint kein Hindernis für eine zügige Diffusion einer Technologie zu sein. Trotz diverser Unterschiede zwischen den Methoden sind die Fallzahlen der Anwendungen von NUB in an Studien beteiligten Krankenhäusern (in der Regel große Häuser oder Universitätskliniken) im Allgemeinen höher im Vergleich zu den übrigen anwendenden Krankenhäusern, im Besonderen in den ersten Jahren der Anwendung. Gleichzeitig fallen jedoch Krankenhäuser auf, die neue Methoden basierend auf Hochrisikomedizinprodukten sehr selten anwenden, was wiederum Fragen hinsichtlich der Patientensicherheit und Behandlungsqualität in diesen Krankenhäusern hinsichtlich dieser NUB aufwirft. Insgesamt bleibt die Abwägung zwischen Innovationsförderung und evidenzbasierter Versorgung eine grundsätzliche Herausforderung. Unter Berücksichtigung aller methodischen Limitationen untermauern die Ergebnisse den Anstoß, das existierende Regelwerk des Verbotsvorbehalts im stationären Sektor zu hinterfragen und eine systematische Evidenzgenerierung in den Vordergrund zu rücken. Wesentlich ist hierbei eine Lösung, die die Wirksamkeit und Sicherheit der Methoden für PatientInnen in den Vordergrund rückt, aber auch einen Rahmen bietet, um eine systematische Evidenzgenerierung voranzutreiben. The use of new examination and treatment methods (NUB) in the inpatient sector remains a controversial topic of health policy discussions even after the introduction of an early benefit assessment for certain medical devices of high-risk class. Policy makers must balance access to innovative technologies, risks and benefits of the technologies, and the ability and resilience of the statutory health insurance systems to finance those. Weaker approval criteria for medical devices compared to pharmaceuticals require consequent evaluation of (clinical) effectiveness and safety when it comes to the diffusion of medical devices in standard care. The overall aim of the study is to investigate the importance of scientific evidence for the adoption and diffusion of NUB in German hospitals. Using a new systematic, criteria-based approach, 27 health care relevant NUB have been identified for further analyses. For these, the development of evidence regarding efficacy and safety as well as the development of the case numbers in hospitals was analyzed longitudinally (2005–2017). Publications were systematically identified, selected, and evaluated to create an overview of evidence available at different point of times. Other factors such as changes in financing schemes and safety

alerts have been considered in the analysis. In addition, the utilization and research activities of German hospitals have been identified and analyzed descriptively. A relationship between diffusion and evidence development can be assumed for about half of the included methods. For the remaining methods, either the body of evidence is too sparse, the case numbers are too small to infer a relationship, or the case number and evidence development show opposite directions. In the sample, it takes up to ten years after marketing authorization until the first results of a randomized clinical trial are published. A robust body of evidence is only available for the majority of technologies after several years of use or does not emerge at all during the observation period. With regard to financing schemes, the study confirms that temporary payments for NUB have been paid for several years without evidence of benefit of the corresponding technologies. The need to submit annual NUB applications for funding does not appear to be a barrier to rapid diffusion. Despite various differences between technologies, case numbers in hospitals participating in studies (usually large hospitals or university hospitals) were generally higher compared to the remaining hospitals; in particular in the first years of NUB utilization. At the same time, however, some hospitals use new methods based on high-risk medicines infrequently, which in turn raise questions about patient safety and quality of care in these hospitals. Overall, the trade-off between promoting innovation and ensuring evidence-based care remains a fundamental challenge. Considering all methodological limitations, the results support the impetus to question the existing regulatory framework for NUB and to focus on systematic evidence generation. It is essential to find a common solution that focuses on the efficacy/effectiveness and safety of the technologies for patients, but also provides a framework for systematic evidence generation.

Coronary Graft Failure Ion C. Țintoiu, Malcolm John Underwood, Stephane Pierre Cook, Hironori Kitabata, Amer Abbas, 2016-03-24 Coronary artery bypass surgery has been developed since 1960s to overcome proximal coronary artery disease. Worldwide, the number of patients that are undergoing coronary artery bypass surgery is steadily increasing. Depending on diverse risk factors, one fifth of grafts are occluded at 1 year. For the remaining, graft patency last usually 8–15 years. This book brings together the main specialists in the field to review the current evidence on epidemiology, pathophysiology, diagnostic, new imaging techniques and specific therapeutic modalities. This volume aims to update a complex subject represented by coronary graft failure. The authors of this monograph are interventional cardiologists, cardiovascular surgeons and research scientists, who will be creating four parts and 71 chapters that are divided in order to give a uniform interpretation of this condition including all aspects of coronary graft failure This book not only provides the most up-to-dated scientific evidence in the field but in a two-step manner. Each chapter is divided into a at a glance part that reflects the basic evidence on the topic, and a “full picture” part that brings all what the advanced reader should be brought with.

**Catheter-Based Cardiovascular Interventions** Peter Lanzer, 2012-08-01 Operator skills, and in particular decision-making and strategic skills, are the most critical factor for the outcome of catheter-based cardiovascular interventions. Currently, such skills are commonly developed by the empirical trial and error method only. In this textbook, for the first time, an explicit teaching, training, and learning approach is set out that will enable interventional operators, whether

cardiologists, vascular surgeons, vascular specialists, or radiologists, to learn about and to develop the cognitive skills required in order to achieve consistent expert-level catheter-based interventions. It is anticipated that adoption of this approach will allow catheter-based interventions to become a domain of excellence, with rapid transfer of knowledge, steep learning curves, and highly efficient acquisition of complex skills by individual operators — all of which are essential to meet successfully the challenges of modern cardiovascular care.

**Piperidine-Based Drug Discovery** Ruben Vardanyan,2017-06-12 Piperidine-Based Drug Discovery outlines the complexities of Piperidine scaffold use in drug discovery, including derivative chemistry, structural properties, methods of synthesis and practical implementations. Piperidine scaffolds are the cornerstones of over 70 commercialized drugs (including multiple blockbusters). Designed as a guide for both experts and students working in this and related areas, it is hoped that this volume will encourage and inspire the continued design and development of novel pharmaceuticals based on Piperidine and its derivatives. Heterocyclic compounds are of central importance to medicinal chemistry, as demonstrated by the high percentage of marketable drugs that feature heterocyclic fragments in their structures. As starting points for drug discovery they offer a broad range of attractive properties, and a detailed understanding of the particular characteristics of each is of great benefit to researchers. The most commonly used heterocycle among US FDA approved pharmaceuticals, Piperidine is an extremely important building block in the synthesis of medicinal agents. This heterocycle and its derivatives exhibit a number of important functionalities and have been employed variously as CNS modulators, antiaggregants, anticoagulants, antihistamines, anti-cancer drugs and analgesics. - Explores this extremely important heterocycle to a high level of detail - Describes synthesis methods for 70 current drugs based on Piperidine scaffolds - Gives drug designers all the key knowledge required to develop new drugs utilizing Piperidine - Provides pharmacologists a solid overview of the chemical background of existing Piperidine-based drugs

**Medical Textiles** Holly Morris,Richard Murray,2021-12-21 This textbook aims to ensure that advances in medical textiles are addressed and that recent developments are able to be appreciated and understood not only by medical practitioners and healthcare personnel but also by textile scientists and technologists. The idea is to stimulate collaborative research and development in the field of medical textiles and to equip researchers with an understanding of the steps they need to take to ensure that their efforts, be they to develop new devices for implantation or items for external application, are carried out in such a way as to improve their effectiveness and enhance the prospects for their implementation. Attention is drawn to the need to improve outcomes in the practical setting and to guidance on the detailed planning required prior to engaging in experimental work. Standard tests can help researchers to monitor performance, but for some important applications such as those required to demonstrate antimicrobial and fluid-repellent performance in most items of protective wear, standard tests consistently fall seriously short in terms of predicting how well they might work in the practical setting.

Guidance is therefore given for their further development. Chapters within the textbook cover: The history of innovation within medical textiles with particular attention given to key concepts of the latter part of the 19th Century and subsequent associated developments. Textile and polymer science underpinning fibres, fabrics, nano-fibre technology and the functional finishes that can be applied to enhance the performance of medical textile products. Woven, knitted, nonwoven and braided fabrics and the key performance characteristics of each fabric type which make them particularly suited to specific medical textile roles such as mesh, grafts, filtration and scaffolds for tissue engineering. Implantable medical textiles, non-implantable medical textiles, health and hygiene products and extracorporeal devices that use textile products. Legislative requirements for medical devices. The design of experiments and suitability for purpose of textile test methods. Case studies to illustrate how medical textiles are applied in practice. The book provides essential reading for textile professionals, biomedical engineers, and others involved in the research, design and engineering of medical and healthcare appliances, and for those employed in the medical profession wishing to gain new insights into the wealth of materials at their disposal.

**Handbook of Urinary Stents** Noor Buchholz, Oliver Hakenberg, Junaid Masood, Christian Bach, 2016-03-03 Urologists have long used urinary stents in patients who have - or who are at risk of developing - an obstruction or blockage of the kidney. These rodlike devices are inserted into the ureter to keep the canal open or to help with healing after trauma, surgery or radiotherapy. More recently the use of stents for the prostate and urethra has also become more widespread, despite poor results in first generation models. Constant development has led to the introduction of second generation stents with a variety of designs, materials and coatings. These have gone a long way to counter the traditional side effects such as irritation, hematuria, infection and encrustation. Handbook of Urinary Stents has been written to provide urologists with a practical guide to the various new models for stenting. The book describes the various stents available; the criteria for their selection; their clinical application and potential complications of use. At the same time, the book provides thorough descriptions of relevant physiology and pathophysiology for those requiring deeper understanding of the subject. Key Points Provides a comprehensive, timely review for urologists needing an accessible guide to the range of stents available Chapters highlight the use of stents in special populations such as children and patients with transplanted ureter Emphasis on clinical complications following the use of stents and how to manage them effectively
