Security and Control in Information Systems Andrew Hawker,2005-06-28 With the advent of electronic commerce, and the increasing sophistication of the information systems used in business organizations, control and security have become key management issues. Responsibility for ensuring that controls are well designed and properly managed can no longer simply be delegated to the technical experts. It has become an area in which the whole management team needs to be involved. This comprehensive review, written for the business reader, includes coverage of recent developments in electronic commerce, as well as the more traditional systems found in many organizations, both large and small. Intended for any manager whose work depends on financial or other business information, it includes case studies, summaries and review questions, making it equally suitable as a source text for students of business studies at postgraduate or advanced level.

Information Security Policies and Procedures Thomas R. Peltier,2004-06-11 Information Security Policies and Procedures: A Practitioner's Reference, Second Edition illustrates how policies and procedures support the efficient running of an organization. This book is divided into two parts, an overview of security policies and procedures, and an information security reference guide. This volume points out how security documents and standards are key elements in the business

process that should never be undertaken to satisfy a perceived audit or security requirement. Instead, policies, standards, and procedures should exist only to support business objectives or mission requirements; they are elements that aid in the execution of management policies. The book emphasizes how information security must be integrated into all aspects of the business process. It examines the 12 enterprise-wide (Tier 1) policies, and maps information security requirements to each. The text also discusses the need for top-specific (Tier 2) policies and application-specific (Tier 3) policies and details how they map with standards and procedures. It may be tempting to download some organization's policies from the Internet, but Peltier cautions against that approach. Instead, he investigates how best to use examples of policies, standards, and procedures toward the achievement of goals. He analyzes the influx of national and international standards, and outlines how to effectively use them to meet the needs of your business.

*Information Security and Privacy in Network Environments*, 1994 The use of information networks for business and government is expanding enormously. Government use of networks features prominently in plans to make government more efficient, effective, and responsive. But the transformation brought about by the networking also raises new concerns for the security and privacy of networked information. This Office of Technology Assessment (OTA) report was requested by the Senate Committee on Governmental Affairs and the House Subcommittee on Telecommunications and Finance. The report begins with background information and an overview of the current situation, a statement of the problems involved in safeguarding unclassified networked information, and a summary of policy issues and options. The major part of the report is then devoted to detailed discussions of policy issues in three areas: (1) cryptography policy, including federal information processing standards and export controls; (2) guidance on safeguarding unclassified information in federal agencies; and (3) legal issues and information security, including electronic commerce, privacy, and intellectual property. Appendices include Congressional letters of request; the Computer Security Act and related documents; evolution of the digital signature standard; and lists of workshop participants, reviews, and other contributors. An index is provided. A separately published eight-page OTA Report Summary is included. (JLB).
