Measuring Health Ian McDowell, 2006 Worldwide economic constraints on health care systems have highlighted the importance of evidence-based medicine and evidence-based health policy. The resulting clinical trials and health services research studies require instruments to monitor the outcomes of care and the output of the health system. However, the over-

abundance of competing measurement scales can make choosing a measure difficult at best. *Measuring Health* provides in-depth reviews of over 100 of the leading health measurement tools and serves as a guide for choosing among them. Now in its third edition, this book provides a critical overview of the field of health measurement, with a technical introduction and discussion of the history and future directions for the field. This latest edition updates the information on each of the measures previously reviewed, and includes a complete new chapter on anxiety measurement to accompany the one on depression. It has also added new instruments to those previously reviewed in each of the chapters in the book. Chapters cover measurements of physical disability, social health, psychological well-being, anxiety, depression, mental status testing, pain, general health status and quality of life. Each chapter presents a tabular comparison of the quality of the instruments reviewed, followed by a detailed description of each method, covering its purpose and conceptual basis, its reliability and validity and, where possible, shows a copy of the actual scale. To ensure accuracy of the information, each review has been approved by the original author of each instrument or by an acknowledged expert.

Cognitive Screening Instruments A. J. Larner, 2012-07-27 *Cognitive Screening Instruments: A Practical Approach* provides a practical and structured overview of some of the most commonly used and easily available cognitive screening instruments applicable in the outpatient clinic and bedside setting. Dementia and cognitive disorders are now recognised as an increasing public health problem, both in terms of patient numbers and cost, as populations age throughout the world. Despite this, many patients with dementia never receive a formal diagnosis, with implications for their appropriate care and management. Diagnostic tests which identify cases of dementia therefore have an important role. Expert authors from around the world equip the reader of *Cognitive Screening Instruments: A Practical Approach* with clear instructions on the usage of each screening instrument, its strengths and weaknesses, the time required for administration, and rules on scoring, such as how to correct for variations in the patient's age or education, and suggested cut-off scores. *Cognitive Screening Instruments: A Practical Approach* is a handy, illustrated guide and a valuable diagnostic aid for practitioners working closely with patients with dementia and mild cognitive impairment. This volume will be of use both to clinicians and to professionals in disciplines allied to medicine who are called upon to assess patients with possible cognitive disorders, including neurologists, old age psychiatrists, neuropsychologists, primary care physicians, dementia support workers, and members of memory assessment teams.

Occupational Therapy Assessments for Older Adults Kevin Bortnick, 2024-06-01 The role of measurement and the

benefits of outcome measures are defined as important tools used to document change in one or more constructs over time, help to describe a client's condition, formulate a prognosis, as well as to evaluate the effects of occupational therapy intervention. Occupational Therapy Assessments for Older Adults: 100 Instruments for Measuring Occupational Performance presents over 100 outcome measures in the form of vignettes that encompass a brief description of each instrument, a review of its psychometric properties, its advantages and disadvantages, administration procedures, permissions to use, author contact information, as well as where and how to procure the instrument. Occupational Therapy Assessments for Older Adults by Dr. Kevin Bortnick narrows down the list of possible choices for the occupational therapy student or clinician to only those with an amount of peer review, bibliographic citations, as well as acceptance within the profession. The text also includes research-based information with text citations and has over 100 tables, diagrams, and figures. Included in the review of each outcome measure: Description: A brief record of the measure. Psychometrics: A review of the level of research evidence that either supports or does not support the instrument, including such items as inter-rater, intra-rater, and test-retest reliabilities, as well as internal consistencies and construct validities among others. Advantages: Synopsis of the benefits of using the measure over others including its unique attributes. Disadvantages: A summary of its faults. For example, the amount of research evidence may be limited or the measure may be expensive. Administration: Information regarding how to administer, score, and interpret results. Permissions: How and where to procure the instrument, such as websites where it may be purchased or journal articles or publications that may contain the scale. Summary: A brief summation of important information. Occupational Therapy Assessments for Older Adults: 100 Instruments for Measuring Occupational Performance encourages occupational therapy and occupational therapy assistants to expand their thinking about the use of appropriate outcome measures with older adult populations. Using the appropriate outcome measure based on evidence can aid in the promotion of health, well-being, and participation of clients.

Handbook of Clinical Psychology in Medical Settings Jerry J. Sweet, Ronald H. Rozensky, Steven M.

Tovian, 1991-04-30 For two decades, I have been responding to questions about the nature of health psychology and how it differs from medical psychology, behavioral medicine, and clinical psychology. From the beginning, I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology. I have repeatedly used an analogy to Newell and Simon's General Problem Solver program of the late 1950s and early 1960s, which had two major functional parts, in addition to the executive component. One was the problem-solving core (the procedural competence); the other was the representation of the problem environment. In the analogy, the concepts, knowledge, and techniques of psychology constitute the core competence; the health system in all its complexity is the problem environment. A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system. Quite apparently, there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system. I hesitate to refer to them as areas of specialization, as the man who gave health psychology its formal definition, Joseph Matarazzo, has said that there are no specialties in psychology (cited in the editors' preface to this book).

Psychosocial Intervention in Long-Term Care Gary W Hartz, D Michael Splain, 2013-01-11 The responsibility of providing mental health evaluations and treatment to nursing home patients is increasingly falling on the shoulders of social services and nursing staff. Psychosocial Intervention in Long-Term Care provides the advanced techniques you, as a caregiver, need for assessing and intervening with psychosocial and behavioral problems in LTC. Targeted to students and staff who are

familiar with the basic needs and problems of LTC residents, this book also describes effective ways of documenting assessments and interventions to help you integrate results into the medical record and prepare for state surveys. Psychosocial Intervention in Long-Term Care presents you with information about common mental disorders in LTC, basic counseling techniques, and the three major types of psychiatric medication. You'll also read about legal issues in the psychosocial arena and learn how to avoid burnout while working in LTC. Best of all, this book shows you how to: use the Geriatric Depression Scale and the Mini Mental Status Exam to screen for depression and dementia design thorough behavioral assessments through use of a tracking grid use results of assessments to set up effective behavioral interventions intervene with specific psychosocial problems, such as aggression document the results of assessments develop effective Resident Assessment Inventories prepare for state surveys and develop plans of correction in response to surveys Whether you're a graduate student or new practitioner in social work, nursing, or health care administration, you'll appreciate this book's practical, hands-on approach to problem solving and its focus on the biopsychosocial model. Only through a thorough assessment of residents' physical, psychological, and social needs can we design effective intervention and provide the care they deserve.
