Summary of Joel P. Trachtman's The Tools of Argument Everest Media,2022-08-19T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 The difference between lawyers and the rest of us is not a gene that makes some people more argumentative, precise, or abrasive than others. The distinctive professional characteristic of lawyers is a method of thinking and argument that has several components. #2 The definition of law is the following: formal rules that carry the sanction of the state. This definition is good for understanding legal argument, but it does not explain all law. For example, religious law can carry the sanction of the state, while the rules of EBay or the NBA do not. #3 Law is a central tool and structure of the state. It is important for you to know your rights against harm to your person, property, or organization, and to be able to advocate for yourself in these regards. #4 A lawyer is an expert. The expertise that the lawyer wields is twofold. First, it includes knowledge of how the legal system works, including how all the written and unwritten procedural rules apply to guide the determination and application of the law.

The Tools of Government Lester M. Salamon,2002-02-22 The Tools of Government is the first professional guide to the principles and practices of public administration in an age when governments no longer provide many services--but arrange for others to do so. Characterized by extensive collaboration among levels of government and between government and the private sector, this new approach to solving public problems presents many new important issues. Comprehensive in scope, this new book offers a first hand look at the challenges faced by contracting out to nonprofit and profit sectors for grants, insurance, regulation, vouchers, cooperative arrangements, tax data, grants-in-aid, and others. The chapters examine over 20 different tools in use today and summarizes their basic features, patterns of usage, key tasks, political and substantive

rational, and the major management challenges that each one poses. International in coverage and application, this book is ideal for students, teachers, and scholars in public administration, management, public policy, economics, political science, and nonprofit management; managers and heads of state, local, and federal agencies; executives in foundations and other nonprofit organizations; and academic, government, and research libraries.

The Argument Writing Toolkit Sean Ruday,2015-07-16 In order for students to write effective arguments, they need to read good arguments. In this practical book, you'll find out how to use mentor texts to make writing instruction more meaningful, authentic, and successful. Author Sean Ruday demonstrates how you can teach middle school students to analyze the qualities of effective arguments and then help them think of those qualities as tools to improve their own writing. You'll learn how to: Introduce high-interest topics to students to get them interested and engaged in argument writing. Teach students to look at multiple sides of an issue and critically evaluate evidence to construct informed, defensible arguments. Make argument writing an interactive, student-driven exercise in which students pursue their own writing projects. Use mentor texts to help students learn the core concepts of argument writing and apply those skills across the curriculum. The book is filled with examples and templates you can bring back to the classroom immediately, as well as an annotated bibliography which links the concepts in this book to the corresponding Common Core State Standards. Blank templates are also available as printable eResources on our website (http://www.routledge.com/9781138924390).

The Tools of Metaphysics and the Metaphysics of Science Theodore Sider,2020-02-19 Metaphysics is sensitive to the conceptual tools we choose to articulate metaphysical problems. Those tools are a lens through which we view metaphysical problems, and the same problems will look different when we change the lens. In this book, Theodore Sider identifies how the shift from modal to postmodal conceptual tools in recent years has affected the metaphysics of science and mathematics. He highlights, for instance, how the increased consideration of concepts of ground, essence, and fundamentality has transformed the debate over structuralism in many ways. Sider then examines three structuralist positions through a postmodal lens. First, nomic essentialism, which says that scientific properties are secondary and lawlike relationships among them are primary. Second, structuralism about individuals, a general position of which mathematical structuralism and structural realism are instances, which says that scientific and mathematical objects are secondary and the pattern of relations among them is primary. And third, comparativism about quantities, which says that particular values of scientific quantities, such as having exactly 1000g mass, are secondary, and quantitative relations, such as being-twice-as-massive-as, are primary. Sider concludes these discussions by considering the meta-question of when theories are equivalent and how that impacts the debate over structuralism.

Handbook of the Logic of Argument and Inference R.H. Johnson,H.J. Ohlbach,Dov M. Gabbay,John Woods,2002-09-11 The Handbook of the Logic of Argument and Inference is an authoritative reference work in a single volume, designed for the attention of senior undergraduates, graduate students and researchers in all the leading research areas concerned with the logic of practical argument and inference. After an introductory chapter, the role of standard logics is surveyed in two chapters. These chapters can serve as a mini-course for interested readers, in deductive and inductive logic, or as a refresher. Then follow two chapters of criticism; one the internal critique and the other the empirical critique. The first deals with objections to standard logics (as theories of argument and inference) arising from the research programme in philosophical logic. The second canvasses criticisms arising from work in cognitive and experimental psychology. The next five chapters deal with developments in dialogue logic, interrogative logic, informal logic, probability logic and artificial intelligence. The last chapter surveys formal approaches to practical reasoning and anticipates possible future developments. Taken as a whole the Handbook is a single-volume indication of the present state of the logic of argument and inference at its conceptual and theoretical best. Future editions will periodically incorporate significant new developments.

Scientific Knowledge and Its Social Problems Jerome R. Ravetz,2020-09-10 Science is continually confronted by new and difficult social and ethical problems. Some of these problems have arisen from the transformation of the academic science of the prewar period into the industrialized science of the present. Traditional theories of science are now widely recognized as obsolete. In Scientific Knowledge and Its Social Problems (originally published in 1971), Jerome R. Ravetz analyzes the work of science as the creation and investigation of problems. He demonstrates the role of choice and value judgment, and the inevitability of error, in scientific research. Ravetz's new introductory essay is a masterful statement of how our understanding of science has evolved over the last two decades.

Straw Man Arguments Scott Aikin,John Casey,2022-02-10 This book analyses the straw man fallacy and its deployment in philosophical reasoning. While commonly invoked in both academic dialogue and public discourse, it has not until now received the attention it deserves as a rhetorical device. Scott Aikin and John Casey propose that straw manning essentially consists in expressing distorted representations of one's critical interlocutor. To this end, the straw man comprises three dialectical forms, and not only the one that is usually suggested: the straw man, the weak man and the hollow man. Moreover, they demonstrate that straw manning is unique among fallacies as it has no particular logical form in itself, because it is an instance of inappropriate meta-argument, or argument about arguments. They discuss the importance of the

onlooking audience to the successful deployment of the straw man, reasoning that the existence of an audience complicates the dialectical boundaries of argument. Providing a lively, provocative and thorough analysis of the straw man fallacy, this book will appeal to postgraduates and researchers alike, working in a range of fields including fallacies, rhetoric, argumentation theory and informal logic.

The Logic of Real Arguments Alec Fisher,2004-09-23 Publisher Description

Handbook of Research on Developments and Future Trends in Transnational Higher Education Morris, Gareth Richard,Li, Li,2023-01-05 Higher education has embraced a period of increasingly rapid development due to the speed of technological advances, increased global competition, an ever more astute and savvier consumer base, and ethical planetary responsibilities. One such educational development is transnational education (TNE). The global pandemic has made TNE a timely topic because traditional international education, which relies on the mobility of staff and students, experienced unprecedented challenges, with borders closed and travel banned. This has presented the international education community with a unique opportunity to reassess the effectiveness and efficiency of transnational activities from a social, ethical, and environmental perspective. The Handbook of Research on Developments and Future Trends in Transnational Higher Education offers a perspective of what the future of TNE may look like, what models of TNE there are, its impact, and what institutions may have to do to be successful moving forward. Universities around the world are growing their TNE partnerships. This reference book explores the benefits TNE can offer universities, staff, and students, while increasing its global outlook and capabilities. It further provides concrete suggestions to readers considering this. Covering topics such as employability skill enhancement, formative assessment, and online higher education, this major reference work is an excellent resource for faculty and administrators of higher education, teacher educators, entrepreneurs, researchers, librarians, and academicians.

Deliberative Theory and Deconstruction Gormley Steven Gormley,2020-06-18 Our political climate is increasingly characterised by hostility towards constructed others. Steven Gormley answers the question: what does it mean to do justice to others? He pursues this question by developing a critical, but productive, dialogue between deliberative theory and deconstruction. Two key claims emerge from this. First: doing justice to the other demands that we maintain an ethos of interruption. And secondly: Such an ethos requires a democratic form of politics. In developing this account, Gormley places deliberative theory and deconstruction into critical conversation with the work of Mouffe, Aristotle, Rorty, Laclau and different traditions of critical theory.

The Tools of Government in the Digital Age Christopher Hood,Helen Margetts,2007-07-20 This important new work updates the arguments of Christopher Hood's classic work The Tools of Government for the Twenty-First century. of how the tools available to government have changed over time.

The Tools of Neuroscience Experiment John Bickle,Carl F. Craver,Ann-Sophie Barwich,2021-12-31 This volume establishes the conceptual foundation for sustained investigation into tool development in neuroscience. Neuroscience relies on diverse and sophisticated experimental tools, and its ultimate explanatory target—our brains and hence the organ driving our behaviors—catapults the investigation of these research tools into a philosophical spotlight. The chapters in this volume integrate the currently scattered work on tool development in neuroscience into the broader philosophy of science community. They also present an accessible compendium for neuroscientists interested in the broader theoretical dimensions of their experimental practices. The chapters are divided into five thematic sections. Section 1 discusses the development of revolutionary research tools across neuroscience's history and argues to various conclusions concerning the relationship between new research tools and theory progress in neuroscience. Section 2 shows how a focus on research tools and their development in neuroscience transforms some traditional epistemological issues and questions about knowledge production in philosophy of science. Section 3 speaks to the most general questions about the way we characterize the nature of the portion of the world that this science addresses. Section 4 discusses hybrid research tools that integrate laboratory and computational methods in exciting new ways. Finally, Section 5 extends research on tool development to the related science of genetics. The Tools of Neuroscience Experiment will be of interest to philosophers and philosophically minded scientists working at the intersection of philosophy and neuroscience.

The Argumentative Turn in Policy Analysis Sven Ove Hansson,Gertrude Hirsch Hadorn,2016-05-26 This book describes argumentative tools and strategies that can be used to guide policy decisions under conditions of great uncertainty. Contributing authors explore methods from philosophical analysis and in particular argumentation analysis, showing how it can be used to systematize discussions about policy issues involving great uncertainty. The first part of the work explores how to deal in a systematic way with decision-making when there may be plural perspectives on the decision problem, along with unknown consequences of what we do. Readers will see how argumentation tools can be used for prioritizing among uncertain dangers, for determining how decisions should be framed, for choosing a suitable time frame for a decision, and for systematically choosing among different decision options. Case studies are presented in the second part of the book, showing argumentation in practice in the areas of climate geoengineering, water governance, synthetic biology, nuclear waste, and financial markets. In one example, argumentation analysis is applied to proposals to solve the climate problem with various technological manipulations of the natural climate system, such as massive dispersion of reflective aerosols into the stratosphere. Even after a thorough investigation of such a proposal, doubt remains as to whether all the potential risks have been identified. In such discussions, conventional risk analysis does not have much to contribute since it presupposes that the risks have been identified, whereas the argumentative approach to uncertainty management can be used to systematize

discussions.
