Relational Calculus for Actionable Knowledge Michel Barès,Éloi Bossé,2022-01-21 This book focuses on one of the major challenges of the newly created scientific domain known as data science: turning data into actionable knowledge in order to exploit increasing data volumes and deal with their inherent complexity. Actionable knowledge has been qualitatively and intensively studied in management, business, and the social sciences but in computer science and engineering, its connection has only recently been established to data mining and its evolution, ‘Knowledge Discovery and Data Mining’ (KDD). Data mining seeks to extract interesting patterns from data, but, until now, the patterns discovered from data have not always been ‘actionable’ for decision-makers in Socio-Technical Organizations (STO). With the evolution of the Internet and connectivity, STOs have evolved into Cyber-Physical and Social Systems (CPSS) that are known to describe our world today. In such complex and dynamic environments, the conventional KDD process is insufficient, and additional processes are required to transform complex data into actionable knowledge. Readers are presented with advanced knowledge concepts and the analytics and information fusion (AIF) processes aimed at delivering actionable knowledge. The authors provide an understanding of the concept of ‘relation’ and its exploitation, relational calculus, as well as the formalization of specific dimensions of knowledge that achieve a semantic growth along the AIF processes. This book serves as an important technical presentation of relational calculus and its application to processing chains in order to generate actionable knowledge. It is ideal for graduate students, researchers, or industry professionals interested in decision science

and knowledge engineering.

Design Characteristics of Virtual Learning Environments Daniel Müller, 2012-10-11 The first objective of this study is to derive a multidimensional research framework simultaneously outlining and concretising particular aspects being relevant to and surrounding the elicitation and evaluation of VLE design characteristics. Based on this, the second objective of this study is to elicit for the first time a holistic set of well-defined, simultaneously detailed and operative VLE design characteristics systematically. In reply to a recently articulated call for research (Venkatesh & Bala, 2008), the third objective of this study is to evaluate for the first time the impact of the desired set of VLE design characteristics to be elicited on crucial behavioural determinants of users' behavioural intention to use and actual use of a VLE in terms of the VLE success measures of this study. Such an investigation may reveal further, more detailed and operative, knowledge about design-related and behavioural drivers of users' current VLE use/refusal.

Department of Homeland Security Bioterrorism Risk Assessment National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Methodological Improvements to the Department of Homeland Security's Biological Agent Risk Analysis, 2008-12-03 The mission of Department of Homeland Security Bioterrorism Risk Assessment: A Call for Change, the book published in December 2008, is to independently and scientifically review the methodology that led to the 2006 Department of Homeland Security report, Bioterrorism Risk Assessment (BTRA) and provide a foundation for future updates. This book identifies a number of fundamental concerns with the BTRA of 2006, ranging from mathematical and statistical mistakes that have corrupted results, to unnecessarily complicated probability models and models with fidelity far exceeding existing data, to more basic questions about how terrorist behavior should be modeled. Rather than merely criticizing what was done in the BTRA of 2006, this new NRC book consults outside experts and collects a number of proposed alternatives that could improve DHS's ability to assess potential terrorist behavior as a key element of risk-informed decision making, and it explains these alternatives in the specific context of the BTRA and the bioterrorism threat.

Diffusion and Transport of Pollutants in Atmospheric Mesoscale Flow Fields A. Gyr, Franz-S. Rys, 1995-01-31 In regions as densely populated as Western Europe, prediction of the ecological implications of pollutant transport are important in order to minimise damage in the case of accidents, and to evaluate the possible influence of existing or planned sources. In most cases, such predictions depend on high-speed computation. The present textbook presents a mathematically explicit introduction in eight chapters: 1: An introduction to the basics of fluid dynamics of the atmosphere and the local events and mesoscale processes. 2: The types of PDEs describing atmospheric flows for limited area models, the problem of appropriate boundary conditions describing the topographical constraints, and well-posedness. 3: Thermodynamics of the atmosphere, dry and wet, its stability, and radiation processes, budgets and the influence of their sum. 4: Scaling and similarity laws for stable and convective turbulent atmospheric boundary layers and the influence of inhomogeneous terrain on the advection and the vertical dispersion, and the method of large eddy simulation. 5: Statistical processes in turbulent dispersion, turbulent diffusion and chemical reactions in fluxes. 6: Theoretical modelling of diffusion and dispersion of pollutant gases. 7: The influence of urban heat production on local climate. 8: Atmospheric inversion layers and lapping inversion, the stable boundary layer and nocturnal inversion.

Project Management Process Improvement Robert K. Wysocki, 2004 No matter how perfect a project plan may be on paper, it is worthless if nobody actually uses it. This innovative guide shows you how to ensure that your team has the process capabilities needed to successfully carry out any project plan you put to paper. By using the SEI's Capability Maturity Model, The Project Management Maturity Model, and PMBOK Knowledge areas, you can baseline your team's process level to see how it measures up to those required by a project plan.

Hazard Mitigation and Preparedness Dylan Sandler, Anna K. Schwab, David J. Brower, 2016-08-05 This book introduces the concept of hazards as part of the earth's natural systems, in contrast to disasters, which occur at the intersection of the built and natural environments. It emphasizes choices made by society that either increase or diminish our level of vulnerability to the impacts of hazards, and the role of the emergency manager in how these choices are made and acted upon. The book defines key concepts including mitigation, preparedness, resilience, vulnerability, and explains the role of the emergency manager in putting these principles into practice.

Competition Law and Patents Irina Haracoglou, 2008-01-01 This is an incredibly interesting book on an increasingly

pertinent topic. . . the book is succinctly written and provides a comprehensive overview of EU law. . . providing a really useful analysis of the European cases concerned with the imposition of a duty to deal in relation to intellectual property. . . This book is a thoroughly enjoyable read, and perhaps because of its brevity the author retains her focus on the central issues being examined. I found it to be engaging and thought provoking. Jane Nielsen, Competition and Consumer Law Journal

The book caters for various groups ranging from those with a general interest in competition law, patent law and/or biopharmaceuticals, to students who want to understand how competition and intellectual property work in practice (or to understand the interface between the two policies), and from practitioners and policymakers to people within the biopharmaceutical industry itself. Journal of Intellectual Property Rights

Using the example of research tools in biopharmaceutical research and innovation, this book examines the complexities of the relationship between two fundamental areas of law and policy intellectual property rights and competition law. It addresses a question that is certain to become paramount in other industries also: how to strike the balance between initial and follow-on innovation so as to ensure that access to essential research tools (or other fundamental elements to follow-on innovation) is not impeded. The book concludes by suggesting how competition law could be used to complement the patent balance. Competition Law and Patents caters for various groups ranging from those with a general interest in competition law, patent law and/or biopharmaceuticals, to students who want to understand how competition and intellectual property work in practice (or to understand the interface between the two policies), and from practitioners and policymakers to people within the biopharmaceutical industry itself.
