Vision Carlo Musio, 2001 The light sense is conceivably the key sense in both the animal and the plant kingdom. Vision research, undoubtedly a fast-growing field, is providing impressive results thanks to modern theoretical and methodological advances. The approach of biophysics and neuroscience seems to be of great benefit and, for this reason, the present book gives an outline of recent acquisitions and updated advanced methods concerning this approach. Visual mechanisms and processes are analysed at several (molecular, cellular, integrative, computational and cognitive) levels by different methodologies (from molecular biology to computation) applied to different living models (from protists to humans, via invertebrates and lower vertebrates). Contents: The Optics of Animal Eyes (M F Land); Rhodopsin-Like Proteins: The Universal and Probably Unique Proteins for Vision (P Gualtieri); The Molecular Design of a Visual Cascade: Molecular Stages of Phototransduction in Drosophila (R Paulsen et al.); Molecular Changes During Primary Visual Pathway Development (K L Moya et al.); Color Vision and Retinal Randomness of the Japanese Yellow Swallowtail Butterfly, Papilio Xuthus (K Arikawa et al.); Patch-Clamping Solitary Visual Cells to Understand the Cellular Mechanisms of Invertebrate Phototransduction (C Musio); Phototransduction in Retinal Rods and Cones (Y Koutalos et al.); Formation of ON and OFF Ganglion Cell Mosaics (L M Chalupa); Endogenous Nitric Oxide Modulates Signal Transmission from Photoreceptors to On-Center Bipolar Cells in the Rabbit Retina (B Lei & I Perlman); Now You See It, Now You Don't: Shunting Inhibition in Early Vision (L Borg-Graham et al.); Visual Perceptual Learning (N Berardi & A Fiorentini); Functions of the Primate Temporal Lobe Cortical Visual Areas in Invariant Visual Object and Face Recognition (E T Rolls); Vector Code in Neuronal Networks (E N Sokolov); and other papers. Readership: Scientists and postdoctoral students in neurosciences, biophysics and physiology.

Memory and Emotion Pasquale Calabrese, Anna Neugebauer, 2002 Deals primarily with the role of emotions in the mechanisms of memory. A compilation of the lectures given at a course conducted at the International School of Biocybernetics.

Biophysics Of Photoreception: Molecular And Phototransductive Events Cloe Taddei-ferretti, 1998-01-15 This is the first volume of new book series on biophysics and biocybernetics, initiated by the Istituto Italiano per gli Studi Filosofici. A main problem in biophysics is the interaction of light information with functional living structures, in order to shape the organism's behaviour. Although the processes of photoreception and phototransduction are articulated in various ways in different living

beings — as it is seen in the subdivision of the topics in this volume on microorganisms, invertebrates, and vertebrates — general ways of light signal reception and transduction through light energy, i.e., photosensitive molecule interactions, could be observed. Highly sophisticated advanced techniques are employed in this research field.

Hegel and the Freedom of Moderns Domenico Losurdo, 2004-08-18 Available in English for the first time, Hegel and the Freedom of Moderns revives discussion of the major political and philosophical tenets underlying contemporary liberalism through a revolutionary interpretation of G. W. F. Hegel's thought. Domenico Losurdo, one of the world's leading Hegelians, reveals that the philosopher was fully engaged with the political controversies of his time. In so doing, he shows how the issues addressed by Hegel in the nineteenth century resonate with many of the central political concerns of today, among them questions of community, nation, liberalism, and freedom. Based on an examination of Hegel's entire corpus—including manuscripts, lecture notes, different versions of texts, and letters—Losurdo locates the philosopher's works within the historical contexts and political situations in which they were composed. Hegel and the Freedom of Moderns persuasively argues that the tug of war between "conservative" and "liberal" interpretations of Hegel has obscured and distorted the most important aspects of his political thought. Losurdo unravels this misleading dualism and provides an illuminating discussion of the relation between Hegel's political philosophy and the thinking of Karl Marx and Friedrich Engels. He also discusses Hegel's ideas in relation to the pertinent writings of other major figures of modern political philosophy such as Jean-Jacques Rousseau, John Locke, Edmund Burke, John Stuart Mill, Jeremy Bentham, Karl Popper, Norberto Bobbio, and Friedrich Hayek.

Vico, Hegel and the Making of Modern Italy Alessandro De Arcangelis, 2025-06-26 Embracing a transnational approach to 19th-century Italian intellectual history, this book examines the encounter and amalgamation of local and foreign philosophical traditions, chiefly represented by the thought of Giambattista Vico and Georg Wilhelm Friedrich Hegel, showcasing their contribution to shaping a historical mindset that guided and legitimised Italians' experiences of political change. Taking a revisionist stance, the author challenges the prevailing view that Italian thinkers passively adopted foreign ideas. Instead, they engaged critically with them, questioning their conceptual foundations and applicability to Italy's political landscape. Vico, Hegel and the Making of Modern Italy reveals that Italian intellectuals sought cultural and political renewal, at both local and European levels, not through assimilation but through steadfast allegiance to a local strand of political thought inspired by Vico's humanist historicism. The book ultimately explores how philosophical thought empowered Italian intellectuals to navigate the uncertainties, drama, and energy of the Risorgimento, underscoring the enduring significance of philosophical knowledge in shaping Italy's political trajectory.

The Trial of Giordano Bruno Germano Maifreda, 2022-06-16 In 1600, Giordano Bruno, one of the leading intellectuals of the Renaissance, was burned at the stake on the charge of heresy by the Roman Inquisition. He is remembered primarily

for his cosmological theories, particularly that the universe was infinite with the Earth not being at its centre. Today, he has become a symbol of the struggle for religious and philosophical tolerance. The Trial of Giordano Bruno, originally published in Italian in 2018, provides English audiences with a complete and updated reconstruction of the inquisitorial trial by analysing the accusations, witnesses, and legal proceedings in detail. The author also gives a detailed profile of Bruno as well as the body which arrested and accused him – the Inquisition. This book will appeal to all those interested in the life and death of Giordano Bruno, as well as those interested in Early Modern legal proceedings, the Roman Inquisition, and the history of religious and philosophical tolerance.

Biocybernetics Of Vision: Integrative Mechanisms And Cognitive Processes Cloe Taddei-ferretti, 1998-01-15 Visual cognition is an important area of biocybernetics. It ranges from the filtering processes of early vision to the structural and functional organization of the visual centres, as well as, in higher animals, to the neuronal plasticity, the decision-making rules, the effect of noise, the role of attention, the ambiguity of patterns, and the time dimension. All these factors contribute to the cognitive interpretation of visual sensation that takes place in visual perception. A side field is machine vision, in which the signal processing known from animal vision is applied to the mobile robots responding to light stimulation.

Macromolecular Interplay in Brain Associative Mechanisms Anna Neugebauer, 1998 This volume looks at the associative mechanisms of the brain, particularly of the cortico-limbic and diencephalic systems, and also at the macromolecular effects on them, by integrating the contributions of various disciplines converging on one subject and from different points of view. It addresses the question of how so many different activity levels — the biochemical, physiological, and psychological ones — interact in integrative processes. The topics treated include brain reverberating systems and associative phenomena; long-term potentiation, learning, and memory; gene activity and brain activity; and gene expression and information processing during sleep.

Nietzsche, the Aristocratic Rebel Domenico Losurdo, 2019-10-14 Perhaps no philosopher is more of a conundrum than Nietzsche, the solitary rebel, poet, wayfarer, anti-revolutionary Aufklärer and theorist of aristocratic radicalism. His accusers identify in his 'superman' the origins of Nazism, and thus issue an irrevocable condemnation; his defenders pursue a hermeneutics of innocence founded ultimately in allegory. In a work that constitutes the most important contribution to Nietzschean studies in recent decades, Domenico Losurdo instead pursues a less reductive strategy. Taking literally the

ruthless implications of Nietzsche's anti-democratic thinking – his celebration of slavery, of war and colonial expansion, and eugenics – he nevertheless refuses to treat these from the perspective of the mid-twentieth century. In doing so, he restores Nietzsche's works to their complex nineteenth-century context, and presents a more compelling account of the importance of Nietzsche as philosopher than can be expected from his many contemporary apologists. Translated by Gregor Benton. With an Introduction by Harrison Fluss. Originally published in Italian by Bollati Boringhieri Editore as *Domenico Losurdo, Nietzsche, il ribelle aristocratico: Biografia intellettuale e bilancio critico*, Turin, 2002.

Central European Pasts Ines Peper, Thomas Wallnig, 2022-07-18 Präsentationsvideo (4. Folge der Reihe 'ÖGE18 Update') Anyone wishing to look beyond the paradigm of Western progress needs to understand how it came into being. In the intellectual culture of the 17th and 18th centuries, the competitive comparison of Ancients and Moderns and their respective relations to civilization and barbarism constituted one of the formative discourses. Yet alternative ideas of time and historicity are encountered not only in cultural contexts outside of Europe but also in the largely forgotten professional knowledge of the Old World: Thomism, Peripatetism, moderate forms of criticism, political theory, and legal practice. This book introduces a broad panorama of such intellectual cultures in Central Europe. It situates theological, historical, and philosophical scholarship in its institutional and epistemological environments: the Church, the Holy Roman Empire, and the emerging Habsburg Monarchy. In doing so, it identifies struggles over competing pasts – Christian, ethnic, legal – as the core of those domains' intellectual development.

The Oxford Handbook of Descartes and Cartesianism Steven Nadler, Tad M. Schmaltz, Delphine Antoine-Mahut, 2019-05-02 The Oxford Handbook of Descartes and Cartesianism comprises fifty specially written chapters on René Descartes (1596-1650) and Cartesianism, the dominant paradigm for philosophy and science in the seventeenth century, written by an international group of leading scholars of early modern philosophy. The first part focuses on the various aspects of Descartes's biography (including his background, intellectual contexts, writings, and correspondence) and philosophy, with chapters on his epistemology, method, metaphysics, physics, mathematics, moral philosophy, political thought, medical thought, and aesthetics. The chapters of the second part are devoted to the defense, development and modification of Descartes's ideas by later generations of Cartesian philosophers in France, the Netherlands, Italy, and elsewhere. The third and final part considers the opposition to Cartesian philosophy by other philosophers, as well as by civil, ecclesiastic, and academic authorities. This handbook provides an extensive overview of Cartesianism - its doctrines, its legacies and its fortunes - in the period based on the latest research.

A History of Italian Economic Thought Riccardo Faucci, 2014-04-03 This book provides the non-Italian scholar with an extensive picture of the development of Italian economics, from the Sixteenth century to the present. The thread of the narrative is the dialectics between economic theory and political action, where the former attempts to enlighten the latter,

but at the same time receives from politics the main stimulus to enlarge its field of reflection. This is particularly clear during the Enlightenment. Inside, this book insists on stressing that Galiani, Verri, and Beccaria were economists quite sensitive to practical issues, but who also were willing to attain generally valid conclusions. In this sense, pure economics was never performed in Italy. Even Pareto used economics (and sociology) in order to interpret and possibly steer the course of political action. Within this book it illustrates the Restoration period (1815-48). There was a slowdown of the economists' engagement, due to an adverse political situation, that prompted the economists to prefer less dangerous subjects, such as the relationship between economics, morals, and law (the main interpreter of this attitude was Romagnosi). After 1848, however, in parallel with the Risorgimento cultural climate, a new vision of the economists' task was eventually manifested. Between economics and political Liberalism a sort of alliance was established, whose prophet was F. Ferrara. While the Historical school of economics of German origin played a minor role, Pure Economics (1890-1940 approx.) had a considerable success, as regards both economic equilibrium and the theory of public finance. Consequently, the introduction of Keynes's ideas was rather troubled. Instead, Hayek had an immediate success. This book concludes with a chapter devoted to the intense relationships between economic theories, economic programmes and political action after 1945. Here, the Sraffa debate played an important role in stimulating Italian economists to a reflection on the patterns of Italian economy and the possibilities of transforming Italy's economic and social structure.

Greece Reinvented Han Lamers, 2015-11-16 Greece Reinvented discusses the transformation of Byzantine Hellenism as the cultural elite of Byzantium, displaced to Italy, constructed it. It explores why and how Byzantine migrants such as Cardinal Bessarion, Ianus Lascaris, and Giovanni Gemisto adopted Greek personas to replace traditional Byzantine claims to the heirship of ancient Rome. In Greece Reinvented, Han Lamers shows that being Greek in the diaspora was both blessing and burden, and explores how these migrants' newfound 'Greekness' enabled them to create distinctive positions for themselves while promoting group cohesion. These Greek personas reflected Latin understandings of who the Greeks 'really' were but sometimes also undermined Western paradigms. Greece Reinvented reveals some of the cultural tensions that bubble under the surface of the much-studied transmission of Greek learning from Byzantium to Italy.

Lateinische Musterprosa und Sprachpflege der Neuzeit (17. - Anfang des 19. Jhs.) Oleg Nikitinski, 2017-03-06 Während die lateinische Prosa der Renaissance-Autoren ansatzweise durch das *Lexique de la prose latine de la Renaissance* von René Hoven erschlossen ist, gab es bisher für die späteren Autoren noch kein Wörterbuch. Besonders fehlte eine stilistische Dokumentation. Eine genaue Dokumentation ist von epochengeschichtlichem Interesse und füllt nicht nur eine Lücke in der lateinischen Lexikographie, sondern bietet auch neues Material zum Vergleich mit dem Sprachgebrauch der Nationalsprachen. Im vorliegenden Wörterbuch werden neue Wörter registriert, der Schwerpunkt liegt aber auf den neuen Bedeutungen des antiken Sprachguts. Als Ausgangspunkt wurden kultur- und speziell philologiegeschichtlich

aufschlussreiche Texte lateinischer Musterprosa ausgewählt, d.h. Texte von Autoren, die im Hinblick auf die lateinische Sprachpflege als vorbildlich galten. Da diese Musterprosa-Autoren sich bemühten, möglichst antike (und dann meistens klassische) Wörter zu gebrauchen, werden in diesem Wörterbuch nur solche Wörter und Wortbedeutungen aufgenommen, die bis zum 7. Jh. n. Chr. nicht bezeugt sind. While Renaissance Latin prose has been opened up by René Hoven in his 'Lexique de la prose latine de la Renaissance', there has been no dictionary for the later authors. Especially a stylistic documentation was missing. An exact documentation is of epoch-historical interest and not only fills a gap in existing Latin lexicography, but also offers new material for comparison with how vernacular languages were used. In this dictionary, new words are registered, but the focus is on the new meanings of Classic Latin words. As a starting point, culturally and philologically significant texts of Latin prose, were selected, i.e. texts by authors who were regarded as exemplary. Since these authors tried to use as many as possible ancient (and then mostly classical) words, this dictionary contains only those words and word meanings, which are not attested until the 7th century AD.

Neuronal Coding of Perceptual Systems Werner Backhaus, 2001 Neuronal coding of information coming from external and internal environments and transduced by sensory receptors constitutes a basic biophysical problem. After the coding phase, such information orients organism responses, shaping complex behavioural patterns. The characteristics of both neurons (interneurons with re-entering connections, latency times, filter bandwidth with respect to input signals, logic operations on multiple convergent signals) and neuron nets (reverberating nets, feedback/feed-forward connections, oscillations due to endogenous activity patterns) are important for coding mechanisms. Neuronal coding is implied also in the higher phases of information processing linked to consciousness, when neuronal activity patterns are related to perceptual mental representations.

Neuronal Bases and Psychological Aspects of Consciousness Cloe Taddei-Ferretti, 1999 For a few decades, the puzzle of consciousness, which for centuries was analysed by philosophers, has been finding a wide interest in the scientific field, where previously it was not entitled to be a member. It has become one of the most-debated problems in the cognitive sciences. The anatomical bases, neurophysiological correlates and elementary mechanisms underlying complex processes arising with consciousness have been compared with the psychological (perceptive, cognitive, volitive, emotional) aspects of conscious expressions, in normal and pathological conditions. Various theories, which attempt to fit systematically and coherently neural and psychological data, have been debated, proving the emergence of the phenomenon of consciousness.

Emotions, Qualia, and Consciousness Alfred W. Kaszniak, 2001 The experience of emotion is a ubiquitous component of the stream of consciousness; emotional qualia interact with other contents and processes of consciousness in complex ways. Recent research has supported the hypothesis that important functional aspects of emotion can operate outside the conscious

awareness. Primary types of emotions are found in animals, while secondary, more complex types are involved in interpersonal relationships. Emotions both influence genetic repair mechanisms of individuals and are responsible for group behavior. Many scholars and scientists believe that no scientific or philosophic account of consciousness can be complete without an understanding of the role of emotion. Contents: Emotion and Consciousness: Current Research and Controversies (A W Kaszniak); The Nature of Typical Emotions (A Ben-Ze'ev); Emotions Associated to Cognitive Revision as a Basis for Values (P Livet); Neuro-Affective Processes and the Brain Substrates of Emotion: Emerging Perspective and Dilemmas (J Pankseep); Imagery and Emotion: Information Networks in the Brain (P J Lang); Hemispheric Asymmetries in Representation and Control of Emotions: Evidence from Unilateral Brain Damage (G Gainotti); Hierarchical Organization of Emotional Experience and Its Neural Substrates (R Lane); Metal Representations, the Reticular Activating System and Emotions (B Cabott); Antecedents and Functions of Emotion Episodes (N H Frijda); The Communication of Emotion (U Hess); The Mental Representation of Romantic Jealousy: A Blended Emotion (and More) (D J Sharpsteen); and other papers. Readership: Postdoctoral students and researchers in biocybernetics, neurosciences, cognitive sciences and psychology.

High Dilution Effects On Cells And Integrated Systems - Proceedings Of The International School Of Biophysics Cloe Taddei-ferretti, P Marotta, 1998-03-25 High dilution effects constitute a major problem on the frontier of biophysics. The reported effects on simple and complex biological systems range from in vitro and in vivo models to cellular metabolism regulation, the immune system, the nervous system, intoxicated organs and organisms, and developmental models. The physical properties of high dilutions have been considered, such as the organization properties of water molecules in the presence and after the presence of solute molecules, the energy characteristics of empty and full water clusters, and their dynamical interactions with proteins. Among the mechanisms responsible for the high dilution effects, a non-molecular transfer of information has been hypothesized.
