Nitroxides Olivier Ouari, Didier Gimes, 2021-05-13 Nitroxides are versatile small organic molecules possessing a stabilised free radical. With their unpaired electron spin they display a unique reactivity towards various environmental factors, enabling a diverse range of applications. They have uses as synthetic tools, such as catalysts or building blocks; imaging agents and probes in biomedicine and materials science; for medicinal antioxidant applications; and in energy storage. Polynitroxides (polymers bearing pendant nitroxide sidechains) have been used in organic radical batteries, oxidation catalysts and in exchange reactions for constructing complex architectures. Chapters in this book cover the synthesis of nitroxides, EPR studies and magnetic resonance applications, physiochemical studies, and applications including in batteries, imaging and organic synthesis. With contributions from leaders in the field, Nitroxides will be of interest to graduate students and researchers across chemistry, physics, biology and materials science.

Atrial Fibrillation: Selection of Management Strategy and Evaluation of Outcomes Rui Providencia, Serge Boveda, Teresa Strisciuglio, Alexandre Almorad, 2024-09-13 Atrial fibrillation (AF) is an increasing arrhythmia disease; its pathophysiology is the subject of many studies. Rate and rhythm control along with stroke prophylaxis are the cornerstones of AF therapy. With the recent evolution of techniques, AF ablation is becoming the first therapeutic option in many centres worldwide. Pulmonary vein isolation (PVI) for paroxysmal AF is now well established. Additional methods are now rising with non-PV trigger ablation: such as drivers, posterior wall isolation, epicardial ablation... Recognition of physiopathological signature for AF is the next challenge for all rhythmologists. This will be achieved only by collecting different inputs such as imagery and mapping. This Research Topic will focus on how to define a persistent AF ablation strategy and evaluate its outcome. What is the role of pre-ablation imagery (MRI, ultrasound, CT...) in elaborating an AF ablation strategy? Could post-ablation imagery be a tool to evaluate the success of an ablation? Furthermore, the different and complex mechanisms initiating and maintaining AF are still under investigation leading to the absence of consensus for ablation treatment. What are the roles played by the new mapping tools along with their algorithms regarding the outcome of ablation? The recent development of new ablation technologies/catheters such as Pulse Field Ablation and Radiofrequency balloon are bringing a lot of questions

regarding long-term results of PVI and non-PV trigger ablation.

Concepts and Design of Materials Nanoarchitectonics Omar Azzaroni, Katsuhiko Ariga, 2022-02-09 The concept of nanoarchitectonics was introduced to describe the correct manipulation of nanoscale materials in the creation of nano-devices and applications. Nanoarchitectonics has begun to spread into many fields including nanostructured materials synthesis, supramolecular assembly, nanoscale structural fabrications, materials hybridizations, materials and structures for energy and environmental sciences, device and physical application, and bio- and medical applications. Following on from the 2012 title *Manipulation of Nanoscale Materials*, *Concepts and Design of Materials Nanoarchitectonics* covers the introductory features underlying the field, presenting a unifying overview of the theoretical aspects and emerging applications that are changing the capability to understand and design advanced functional materials. Edited by pioneers of the field, this book will appeal to researchers working in nanoscience, materials science, supramolecular chemistry, physical chemistry and organic chemistry, as well as graduate students in these areas.

Heterocycles from Transition Metal Catalysis András Kotschy, Géza Timári, 2005-12-28 *Heterocycles from Transition Metal Catalysis: Formation and Functionalization* provides a concise summary of the prominent role of late transition metal (palladium, nickel, copper) catalysed processes in the synthesis and functionalization of heterocyclic systems. It gives an introduction to catalytic transformations, an overview of the most important reaction types, and presents synthetically useful catalytic processes classified by the target system and the type of transformation. The book provides a representative selection of transition metal catalysed reactions transformations that are relevant in heterocyclic chemistry. In this way, the authors present a useful resource for members of the academic community looking for a textbook as well as industrial chemists in search of a reference book. This book will be an invaluable resource for synthetic chemists, medicinal chemists, and those more generally interested in applied catalysis.

Principles and Practice of Lacrimal Surgery Mohammad Javed Ali, 2014-10-20 Lacrimal disorders are one of the very common conditions encountered not only by the oculoplastic surgeons but also by the general ophthalmologists in their daily practice. Written by global experts in the field of dacryology, this book is a comprehensive, updated practical guide on evaluation and management of patients with lacrimal diseases. This up-to-date reference work covers all aspects of the field including the basic anatomy and underlying pathology, evaluation of a patient, and all surgical procedures currently used in managing various disorders in an organized fashion. Surgical modalities including the endoscopic approaches are thoroughly and succinctly reviewed with ample illustrations for better understanding. Since familiarity with a surgical technique is incomplete without the knowledge of risk factors and red flags, an emphasis on dealing with surgical complications and failure has received priority in this treatise. Controversial topics and treatment dilemmas have been discussed in detail with the objective of reviewing the present consensus among the experts.

Electron Spin Resonance M. C. R. Symons, 1992 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of

chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Beyond Smart and Connected Governments J. Ramon Gil-Garcia,Theresa A. Pardo,Mila Gasco-Hernandez,2020-03-06 This book provides a comprehensive introduction to the study of sensors and the Internet of Things (IoT) from a government and public policy perspective. Since 2011, federal spending on IoT has been growing at a compound annual rate of ten percent. New technologies, such as sensors, and new kinds of data, such as big data, are creating new ways to systematically capture data and to use it to respond to complex problems. Some of these new technologies and applications have been identified and studied in recent literature in terms of their relevance to government. This volume adds to the literature by presenting sound theories and concepts for understanding the opportunities and challenges governments face when seeking to improve public services and government operations through the use of IoT. It also includes innovative methodologies for building understanding of the potential of a smart and connected government. In addition, the book offers relevant case studies and practical recommendations for the development, management, and evaluation of public policies and government programs.

Climate Change Modeling Methodology Philip J. Rasch, 2012-12-09 The Earth's average temperature has risen by 1.4°F over the past century, and computer models project that it will rise much more over the next hundred years, with significant impacts on weather, climate, and human society. Many climate scientists attribute these increases to the build up of greenhouse gases produced by the burning of fossil fuels and to the anthropogenic production of short-lived climate pollutants. *Climate Change Modeling Methodologies: Selected Entries from the Encyclopaedia of Sustainability Science and Technology* provides readers with an introduction to the tools and analysis techniques used by climate change scientists to interpret the role of these forcing agents on climate. Readers will also gain a deeper understanding of the strengths and weaknesses of these models and how to test and assess them. The contributions include a glossary of key terms and a concise definition of the subject for each topic, as well as recommendations for sources of more detailed information.
