web ship resistance is defined as the force required to tow the ship in calm water at a constant velocity
 components of resistance a body in water which is stationary with respect to water experiences only hydrostatic pressure hydrostatic pressure always acts to oppose the weight of the body

 web 1962 tldr the method utilizes a source density distribution on the surface of the body and solves for the distribution necessary to make the normal velocity zero on the boundary and the flow velocities at points both on and off the body surface are calculated
