Echinodermata Valeria Matranga, 2005-10-24 Members of the phylum Echinodermata are among the most familiar marine invertebrates. Forms such as the sea star have become virtually a symbol of sea life. Used in ancient oriental medicine as a source of bioactive compounds, sea cucumbers, sea stars and sea urchins are now used for the extraction and purification of cytotoxic, haemolytic, antiviral, antifungal, antifouling, antimicrobial and even anti-tumoural activities. In addition, of the five extant classes, sea urchins and sea cucumbers are important economic resources for current fishery and aquaculture. Molecular and cell biological techniques described in this book are, on the one hand, indicative of the improvements made over the years and, on the other, stress the need of their further exploitation for the sustainable production of bioactive compounds and their application in biomedicine.

A Student's Guide to the Seashore J. D. Fish, S. Fish, 1996-06-06 Students and naturalists are not only interested in which species live on the seashore but also about their biology. How does a particular species reproduce? What is its life cycle? A

Student's Guide to the Seashore is a unique, concise, illustrated guide to both the biology and identification of over 600 common and widespread shore animals and plants. In this new edition, for the first time, simple keys are included to allow accurate identification, and each species is beautifully illustrated by the author's line drawings. Together with concise summaries of diagnostic features, and notes on biology, this is the first comprehensive guide to the seashore giving a fascinating insight into the diversity and complexity of life on the shore. An extensive glossary of scientific terms and complete bibliography ensure that this book will be the premier biological text and identification guide for many years to come.

Zoology For B.Sc. Students Semester I | Diversity and Biology of Non-Chordata : NEP 2020 University of Lucknow VK Agarwal, This textbook has been designed to meet the needs of B.Sc. First Semester students of Zoology for the University of Lucknow under the recommended National Education Policy 2020. It comprehensively covers theory and practical papers, namely, Diversity and Biology of Non-Chordata. The theory part of this book aptly discusses the identification and classification of non-chordate animals on the basis of their form and structure and describes the general characters of non-chordate animals. Practical part of the book will make the students understand the taxonomic position and body organization of invertebrates. Relevant experiments corresponding to the theoretical topics and examples have been presented systematically to help students achieve sound conceptual understanding and learn experimental procedures.

Fantastic Fossils Donald R. Prothero, 2020-03-31 Nothing fills us with a sense of wonder like fossils. What looks at first like a simple rock is in fact a clue that reveals the staggering diversity of ancient environments, the winding pathways of evolution, and the majesty of a vanished earth. But as much as one might daydream of digging a hole in the backyard and finding a Tyrannosaurus, only a few places contain these buried treasures, and when a scientist comes across a remnant of prehistoric life, great care must be taken. What do budding paleontologists need to know before starting their search? In *Fantastic Fossils*, Donald R. Prothero offers an accessible, entertaining, and richly illustrated guide to the paleontologist's journey. He details the best places to look for fossils, the art of how to find them, and how to classify the major types. Prothero provides expert wisdom about typical fossils that an average person can hope to collect and how to hunt fossils responsibly and ethically. He also explores the lessons that both common and rarer discoveries offer about paleontology and its history, as well as what fossils can tell us about past climates and present climate change. Captivating illustrations by the paleoartist Mary Persis Williams bring to life hundreds of important specimens. Offering valuable lessons for armchair enthusiasts and paleontology students alike, *Fantastic Fossils* is an essential companion for all readers who have ever dreamed of going in search of traces of a lost world.

Evolutionary Mechanisms of Defense Reactions Vaclav Vetvicka, P. Sima, 2012-12-06 At present, we do not fully understand at what stage of the evolution of living matter the first traces of defense reactions occurred. We even do not fully

understand how and why immune systems reached their contemporary state in advanced vertebrates and man. It may be expected that in the near future these questions will be answered by comparative and developmental biology. Together with an extraordinary explosion of our knowledge about immunity of mammals including man, an increase in the interests concerning origin and development of immune mechanisms at lower stages of the phylogeny can be observed. The search for simple types of immune mechanisms in less complex but still evolutionary successful animals is promising and may contribute to better understanding of highly complex immune adaptive responses in mammals. It is important to note that comparative and evolutionary immunology differs greatly from other branches of biomedical science. Apart from immunology and molecular biology, a specialist in this discipline has to be familiar with every detail of taxonomy, comparative anatomy, physiology, embryology, and even with the phyletic relationships of animals. Probably no monography could deal with the entire animal kingdom, because, in many cases, the insights into questions about immune mechanisms of many animal groupings or phyla, and their possible evolutionary implications, are unknown or just now beginning to take shape. For the moment, our knowledge on such matters relies upon reconstructions of ideas that we have deduced from studies on members of relative taxa.

Modern Biology V. B. Rastogi, 1997

The Evolution of Life Graham Bell, 2015 The Evolution of Life stands alone amongst the major textbooks by focusing on key principles to offer a truly accessible, unintimidating treatment of evolutionary biology.

Zoology for B.Sc. Students Semester I: MJC-1 | MIC-1 (As per NEP Patna University (FYUGP) syllabus and other Universities in Bihar) VK Agarwal, This textbook has been designed to meet the needs of B.Sc. First Semester students of Zoology for Patna University and other Universities in Bihar under the recommended National Education Policy 2020. It comprehensively covers theory and practical papers, namely, Diversity of Non-chordata. The theory part of this book aptly discusses the importance of systematics, taxonomy and structural organisation of non-chordates. The students will learn the organisation, complexity and characteristic features of non-chordates and recognize the life functions and the ecological roles of various animal phyla. Relevant experiments corresponding to the theoretical topics and examples have been presented systematically to help students achieve sound conceptual understanding and learn experimental procedures.

Second Semester students of Zoology as per the UGC Choice Based Credit System (CBCS). Comprehensively written, it explains the essential principles, processes and methodology of Coelomate Non-Chordates and Cell Biology. This textbook is profusely illustrated with well-drawn labelled diagrams, flow charts and tables, not only to supplement the descriptions, but also for sound understanding of the concepts.

Life Ricki Lewis, 1998 This text is aimed at students from a non-scientific background, and provides an accessible introduction to biology. It takes a comparative, concept-based approach and has a lively writing style. It has a new chapter on the origins and diversity of life, and there is also a new chapter on biomes. The behaviour and ecology unit has been expanded, as has the coverage of evolution. Ethical issues raised by biotechnology are also discussed; the coverage of chemistry is revised as well.

The Story of Life & the Environment Jo van As, 2012-10-30 The Story of Life & the Environment – an African perspective is about the fragile miracle of life. It's a celebration of the Earth's rich and wonderful diversity – the species, populations, communities and ecosystems that surround us – and of nature's resilience. It unpacks the three major ecosystems: fresh water, the ocean and the land, and the teeming life each supports on and around Africa. It discusses evolution and the ever-branching tree of life; how systems work, how populations expand and contract, and how all the elements of life interact. And it tells the story of how humans originated in Africa, and how we have evolved to become modern people. The book sounds a warning about our human impact on the planet, which is fostering rapid climate change, as well as massive over-consumption and depletion of resources. The book is also about responsible planning and management of our environment and natural resources to redress damage and ensure sustainability. This is the story of life and the environment in Africa.

Echinoderms: Munchen Thomas Heinzeller, James H. Nebelsick, 2004-12-15 Since 1972, scientists from all over the world working on fundamental questions of echinoderm biology and palaeontology have conferred every three years to exchange current views and results. The 11th International Echinoderm Conference held at the University of Munich, Germany, from 6-10 October 2003, continued this tradition. This volume
