Agricultura de Conservacion Food and Agriculture Organization of the United Nations,2002-09-30 Numerosas pruebas empiricas han puesto de manifiesto que la intensificación sostenible de la producción agrícola es técnicamente posible y económicamente rentable, y que brinda beneficios adicionales como el mejoramiento de la calidad de los recursos naturales y la protección del ambiente en zonas actualmente no mejoradas o degradadas, siempre que los agricultores participen en todas las etapas del desarrollo y extensión de la tecnología. Este tipo de agricultura, llamada de conservación, se caracteriza por la eliminación del disturbio mecánico del suelo, por una cobertura permanente del suelo y por la rotación de los cultivos.

Estos tres elementos distinguen la agricultura de conservación de los sistemas agrícolas convencionales. El propósito de esta publicación es demostrar como esta agricultura incrementa la producción y al mismo tiempo reduce la erosión y revierte el proceso de disminución de la fertilidad del suelo; mejora las condiciones de vida de la población rural y restaura el ambiente en los países en desarrollo. El estudio se basa en testimonios y experiencias de agricultores y extensionistas en América Latina y en África.

Tratado de la conservación de las sustancias alimenticias D. J. A. y L., 1832

Industria alimentaria. Tecnologías emergentes Mercè Raventós Santamaría, 2010-05 Suministrar alimentos a la población sigue siendo la principal preocupación de la humanidad en el siglo XXI y, en este sentido, la tecnología desempeñará un papel muy importante. Mediante la publicación del libro *Industria alimentaria. Tecnologías emergentes* se pretende poner de manifiesto el rol fundamental que pueden ejercer las universidades que llevan a cabo actividades en este ámbito, para dar respuesta a una de las necesidades fundamentales del hombre: alimentarse. En la presente obra se presentan, de forma didáctica, algunas tecnologías emergentes que en la actualidad son importantes para la industria alimentaria, puesto que permiten mejorar las características de los productos, al tiempo que son más respetuosas con el medio ambiente. Para la conservación de los alimentos, pueden seguirse procesos no térmicos utilizando alta presión hidrostática, pulsos eléctricos de alta intensidad de campo o la irradiación, entre otros. Estos tres sistemas, que se abordan en los capítulos 2, 3 y 4 del libro, se perfilan como los de mayor interés. Para la obtención de componentes y extractos cada vez más puros, en el capítulo 5 se presenta la extracción con fluidos supercríticos como técnica que permite separar componentes de los alimentos y que supone un gran potencial para la industria alimentaria. El capítulo 6 trata de la tecnología de membranas, que ya viene aplicándose en varias industrias, aunque todavía presenta un componente importante de innovación. Finalmente, esta obra también pretende constituirse en un espacio de reflexión para la industria alimentaria sobre las posibilidades que estas tecnologías ofrecen actualmente y sobre cuáles serán las tendencias futuras de la tecnología de los alimentos, aspecto que se aborda en el último capítulo del libro.
