

What Was The Cause Of The Big Bang

Brendan Sweetman

What Caused the Big Bang? Rem B. Edwards, 2021-07-26 This book critically explores answers to the big question, What produced our universe around fifteen billion years ago in a Big Bang? It critiques contemporary atheistic cosmologies, including Steady State, Oscillationism, Big Fizz, Big Divide, and Big Accident, that affirm the eternity and self-sufficiency of the universe without God. This study defends and revises Process Theology and arguments for God's existence from the universe's life-supporting order and contingent existence.

Gratuitous Suffering and the Problem of Evil Bryan Frances, 2013 Gratuitous Suffering and the Problem of Evil: A Comprehensive Introduction is among the first book-length discussions of theistic approaches to the problem of evil. Bryan Frances's lucid analyses of a variety of possible responses to the problem of evil will provide serious students or general readers much material with which to consider this ancient and contemporary concern. The book offers many useful pedagogical features, including chapter overviews, study questions, summaries, and suggested readings.

Black Holes, Wormholes and Time Machines Jim Al-Khalili, 2002-01-01 Do you know: What might happen if you fall into a black hole? That the Universe does not have an edge? That the reason it gets dark at night is proof of the Big Bang? That cosmic particles time-travel through the atmosphere defying death? That our past, present and future might all coexist out there? With two remarkable ideas, Albert Einstein revolutionized our view of the Universe. His first was that nothing can travel faster than light-the ultimate speed limit. This simple fact leads to the unavoidable conclusion that space and time must be linked together forever as Spacetime. With his second monumental insight, Einstein showed how Spacetime is

warped and stretched by the gravity of all objects in the Universe and even punctured by black holes. But such possible twisting of Spacetime allowed a magic not even Einstein could have imagined: time-travel. Theoretical physicist Jim Al-Khalili finally lays science fiction to rest as he opens up Einstein's Universe. Leading us gently and light-heartedly through the dizzying world of our space and time, he even gives us the recipe for a time machine, capable of taking us Back to the Future, to Alice's Wonderland, or on a trip with the Terminator.

Discover the Big Bang and the Secrets of Our Universe. a New Theory Saoussan Kallel-Jallouli, 2018-05-23 The Big Bang theory asserts that our universe (space and time) was created out of a giant explosion, called the Big Bang. In this paper we shall try to find out about the origin of this explosion and to prove that, apparently, it doesn't violate the first law of thermodynamics, contrary to what is thought. We shall see that it is a natural phenomenon. Thus, we will be able to solve all the problems related to the Big Bang theory: What came before the Big Bang? How could have the universe been created? How can it expand uniformly? What is Dark Energy that is supposed to be the big challenge that causes acceleration of the universe? What is Dark Matter? Where do the relic neutrinos that fill the universe come from? What is the origin of the cosmic microwave background photons? What is the cause of temperature anisotropies that are observed in the Cosmic Microwave Background radiations (CMBR)? What is the cause of CMBR polarization? What is space? What is time? Can we guess how time can flow? Can we speak about absolute space? We will explain how the first star was born and understand how the Coriolis Effect is necessary for the building of many structures in the universe... To do that, we need many disciplines: Mathematical modeling, Astronomy, Physics, Chemistry, Geology, Weather... Besides, we need to recall some physical and chemical properties of water and to introduce many new definitions related to geology and weather... So that we can have a better understanding of our universe.

The Miracle of Man Jim Howard, 2017-01-31 What Is a Man? Biologically, we are animals--homo sapiens. But men are different, born with consciousness, reason, free will, notions of morality, and other characteristics of what we call human nature. Why are we different? Were we created by God or are we just accidents of nature? Are you a child of the King or just a child of King Kong? This is a book of apologetics for laypeople. It looks at arguments for the existence of God and especially at those arguments that can be drawn from human nature. It argues in plain language, with illustrations and humor, that we cannot explain human nature without God, that men are miracles.

Evolution's Purpose Steve McIntosh, 2012-10 Presents the author's view of the scientific story of our evolutionary origins to show how evolution's progressive generation of emergent value reveals a larger purpose within the process. He demonstrates how this purpose can be felt within each of us as the evolutionary impulse to make things better--to grow toward ever-widening realizations of beauty, truth, and goodness--Provided by publisher

What Does It All Mean? William A. Adams, 2013-09-11 As a young man Bill Adams travelled the world teaching US

citizens abroad on behalf of a large state university on the East Coast. Back home he reflected that if there were answers to the great questions of life, then he'd not found them - not in India, in Europe, in China, or Japan. In time he came to see that his lifelong interest in how the mind works could be the clue to the meaning of life. Socrates had been right all along: Know thyself. Adams now sets out a new reasoned argument, based on his experience as a cognitive psychologist and as a human being, to show why Socrates was right: the purpose of life is to recognize ourselves - in each other and in all things. The mind is looking for itself: that is how it works, that is what it does for a living.

Searching for God Joan Burstyn, Gershon Vincow, 2011 The authors of *Searching for God: Study Partners Explore Contemporary Jewish Texts* introduce self-directed hevruta, a novel twist on the traditional Jewish path of in-depth learning with a study partner. Together, they choose the most challenging topic of all, searching for God, and explore five contemporary Jewish texts that present several approaches: mysticism, rationalism, nontraditional Judaism, metaphors from science, and character development. These spiritual seekers are lay-people. Joan Burstyn is an historian and poet; Gershon Vincow is a scientist and community leader. They study, discuss, teach each other, and draw conclusions. The result of this study partnership is a transformative learning experience about Judaism and the search for God. This touching and inspiring account of the commitment of two friends to study texts and share their insights with each other on behalf of their own, and each other's connection to holiness could well be titled *Thinking as a Spiritual Path*. Celebrating intellect as an instrument of prayer, this book will serve as a template for seekers across religious traditions who long for a spiritual practice that satisfies their minds as it gladdens their hearts. --Sylvia Boorstein, author of *Happiness Is an Inside Job: Practicing for a Joyful Life*. This book successfully probes the most basic questions anyone should ask: What do I mean when I use the word 'God'? And how does the answer affect the way I live? --Edward D. Zinbarg, board member, Jewish Theological Seminary Rabbinical School; author of *Faith, Morals and Money: What the World's Religions Tell Us about Ethics in the Marketplace*.

The Natural History of Creation M. Corey, 1995-05-09 *The Natural History of Creation* is the third and final installment in M.A. Corey's natural theology series. This remarkable trilogy-the first of its kind in this century-has worked in tandem with the findings of modern science to help spearhead the rebirth of the natural theology movement around the world. Nowhere will the reader find a more thorough description of the many breathtaking parallels between our modern scientific picture of the creation of the universe and the poetic description of the creation in Genesis One. Contents: The Scientific Accuracy of Genesis One; The Rise of Humanity; Physical Anthropology and Intelligent Design; God and the Nature of Time; Morality and Evolution; Human Nature and the Divine Image; Genesis and Moderate Anthropocentrism; A Self-Created Universe?; Frank Tipler's Omega Point Theory; Divine Action and the Role of Natural Processes; A Contrived World; Evolution and the Nature of the Miraculous; Is Life an Accident?; On the Validity of Natural Theology; A Scientific Interpretation of the Divine Nature; Epilogue: Towards a Genuine Religious Ecology.

The Existence of God Yujin Nagasawa, 2011-04-19 Does God exist? What are the various arguments that seek to prove the existence of God? Can atheists refute these arguments? The Existence of God: A Philosophical Introduction assesses classical and contemporary arguments concerning the existence of God: the ontological argument, introducing the nature of existence, possible worlds, parody objections, and the evolutionary origin of the concept of God the cosmological argument, discussing metaphysical paradoxes of infinity, scientific models of the universe, and philosophers' discussions about ultimate reality and the meaning of life the design argument, addressing Aquinas's Fifth Way, Darwin's theory of evolution, the concept of irreducible complexity, and the current controversy over intelligent design and school education. Bringing the subject fully up to date, Yujin Nagasawa explains these arguments in relation to recent research in cognitive science, the mathematics of infinity, big bang cosmology, and debates about ethics and morality in light of contemporary political and social events. The book also includes fascinating insights into the passions, beliefs and struggles of the philosophers and scientists who have tackled the challenge of proving the existence of God, including Thomas Aquinas, and Kurt Gödel - who at the end of his career as a famous mathematician worked on a secret project to prove the existence of God. The Existence of God: A Philosophical Introduction is an ideal gateway to the philosophy of religion and an excellent starting point for anyone interested in arguments about the existence of God.

Ontological Mathematics: How to Create the Universe Mike Hockney, This book explains how the entire universe can be created using just two ingredients: nothing at all and the Principle of Sufficient Reason (PSR). Why would you need anything else? Nothing else could do the job. Existence, believe it or not, is just dimensionless mathematical points moving according to the PSR. Come and find out how the PSR accomplishes it.

HOLY NAME Thomas Malone, 2019-07-26 Thomas J. Joyce is a journalist, a reporter, and columnist for the Long Island Sentinel. In November 2011, at his home, he is visited by the Blessed Mother who asks for his help in convincing the world to stop taking in vain the name of her divine son. For a while, Thomas doesn't know what to do. Finally, convinced that he was selected for this mission due to his writing abilities, he begins to address the issue in his columns. Realizing that this will only reach people in Eastern Long Island, he teams with an array of collaborators to establish Holy Name, an organization dedicated to telling the entire world that misuse of the holy name is wrong and that it must be stopped. The Holy Name organization implements a series of retributions against authors, TV shows, Broadway plays, and social media sites that routinely disparage the name of God. Several of these lead to lawsuits against the enterprise for restraint of trade and censorship. The enterprise contends with these difficulties and tragedy as it moves to achieve its goal, eradicating the abuse of the holy name.

Cosmic Jackpot Paul Davies, 2007-04-11 Cosmic Jackpot is Paul Davies's eagerly awaited return to cosmology, the successor to his critically acclaimed bestseller The Mind of God. Here he tackles all the big questions, including the biggest

of them all: Why does the universe seem so well adapted for life? In his characteristically clear and elegant style, Davies shows how recent scientific discoveries point to a perplexing fact: many different aspects of the cosmos, from the properties of the humble carbon atom to the speed of light, seem tailor-made to produce life. A radical new theory says it's because our universe is just one of an infinite number of universes, each one slightly different. Our universe is bio-friendly by accident -- we just happened to win the cosmic jackpot. While this multiverse theory is compelling, it has bizarre implications, such as the existence of infinite copies of each of us and Matrix-like simulated universes. And it still leaves a lot unexplained. Davies believes there's a more satisfying solution to the problem of existence: the observations we make today could help shape the nature of reality in the remote past. If this is true, then life -- and, ultimately, consciousness -- aren't just incidental byproducts of nature, but central players in the evolution of the universe. Whether he's elucidating dark matter or dark energy, M-theory or the multiverse, Davies brings the leading edge of science into sharp focus, provoking us to think about the cosmos and our place within it in new and thrilling ways.

Naturalism William Lane Craig, J.P. Moreland, 2002-01-04 Naturalism provides a rigorous analysis and critique of the major varieties of contemporary philosophical naturalism. The authors advocate the thesis that contemporary naturalism should be abandoned, in light of the serious objections raised against it. Contributors draw on a wide range of topics including: epistemology, the philosophy of science, the philosophy of mind and agency, and natural theology.

The Kalam Cosmological Argument, Volume 2 Paul Copan, William Lane Craig, 2017-11-16 The ancient kalam cosmological argument maintains that the series of past events is finite and that therefore the universe began to exist. Two recent scientific discoveries have yielded plausible prima facie physical evidence for the beginning of the universe. The expansion of the universe points to its beginning-to a Big Bang-as one retraces the universe's expansion in time. And the second law of thermodynamics, which implies that the universe's energy is progressively degrading, suggests that the universe began with an initial low entropy condition. The kalam cosmological argument-perhaps the most discussed philosophical argument for God's existence in recent decades-maintains that whatever begins to exist must have a cause. And since the universe began to exist, there must be a transcendent cause of its beginning, a conclusion which is confirmatory of theism. So this medieval argument for the finitude of the past has received fresh wind in its sails from recent scientific discoveries. This collection reviews and assesses the merits of the latest scientific evidences for the universe's beginning. It ends with the kalam argument's conclusion that the universe has a cause-a personal cause with properties of theological significance.
