*Flow and Image Cytometry* Alain Jaquemin-Sablon,2013-06-29 Image analysis and flow cytometry are complementary techniques which provide new insights into essential aspects of cell biology. This book presents an up-to-date overview of current ideas and methods in these domains. It consists of three parts. Part I, Membrane Dynamics and Function, deals with adhesion molecules, membrane pump dynamics, membrane fusion and endocytosis, membrane potential, T-cell homing and cytoskeleton, etc. The second part focuses on problems of cell proliferation, chromosome analysis and sorting, apoptosis, imaging cytometry of fixed and living cells, image analysis for gene mapping from flow-sorted chromosomes, chromatin organization, and liposome-mediated delivery of DNA binding drugs. The third part covers data management systems, cell sorting techniques and microscopy.

Body Image, Eating Disorders, and Obesity in Youth J. Kevin Thompson,Linda Smolak,2001 Examines the relationship between body image disturbances and eating disorders in our most vulnerable population: children and adolescents. The editors present a dynamic approach that combines current research, assessment techniques, and suggestions for treatment and prevention. This volume delivers direction for researchers in the field as well as guidance for practitioners and clinicians working with young clients suffering from these disorders.

*The Oxford Handbook of Intellectual Disability and Development* Jacob A. Burack,2012 We know considerably more about persons with intellectual disability than we did even a decade ago. Seeking to improve and increase upon this knowledge, this book provides a map to continue sophisticated and precise research, to inspire professionals involved with intellectual disability, and to better the lives of persons affected by it.

The SAGE Handbook of Developmental Disorders Patricia Howlin,Tony Charman,Mohammad Ghaziuddin,2011-01-31

Over the last four decades, breakthroughs in genetic knowledge, together with the emergence of disciplines devoted to the scientific study of developmental disorders have resulted in much greater awareness of the many different behavioural and genetic phenotypes involved. It is now evident that not only do different disorders have different causes and different manifestations, but different neurological and biochemical bases, different responses to intervention, and different life courses. Reflecting the enormous changes that have taken place in our knowledge and understanding of developmental disorders, this groundbreaking international volume brings this vast and complex field together for the first time. The Editors have collected together the world's leading academic scholars and clinicians, to explore how current research across a range of different disciplines can inform clinical practice and help to improve the lives of individuals and their families.

**Cognitive and Behavioral Abnormalities of Pediatric Diseases** Ruth D. Nass, Yitzchak Frank, 2010 This book provides a detailed account of intellectual, other neuropsychological and behavioral manifestations of general pediatric diseases. The conditions discussed include the whole range of pediatric diseases - genetic syndromes, other congenital conditions, metabolic, endocrine, gastrointestinal, infectious, immunologic, toxic, trauma, and neoplastic, as well as sensory disabilities including deafness and blindness. Although the book is not intended to discuss cognitive and behavioral manifestations of conditions usually considered to be primary neurological disease, some of those, including cerebral palsy, muscular dystrophy, myotonic dystrophy and epilepsy, are included. Where possible, a translational approach is used, linking the behavioral and cognitive manifestations of these conditions, to the underlying structural, chemical or genetic abnormalities and their effect on the brain, and, in turn, on behavior and cognition. At the same time, included are significant psychosocial factors. Together, those factors have a major effect on patients' performance, including school performance, and on their families. This book is unique in its extensive coverage of the major pediatric conditions and of the detailed neurological, neuropsychological and behavioral aspects of each condition.

**Fetal Subjects, Feminist Positions** Lynn M. Morgan, Meredith Wilson Michaels, 2016-11-11 Selected as the Most Enduring Edited Collection by the Council on Anthropology and Reproduction Since Roe v. Wade, there has been increasing public interest in fetuses, in part as a result of effective antiabortion propaganda and in part as a result of developments in medicine and technology. While feminists have begun to take note of the proliferation of fetal images in various media, such as medical journals, magazines, and motion pictures, few have openly addressed the problems that the emergence of the fetal subject poses for feminism. *Fetal Subjects, Feminist Positions* foregrounds feminism's effort to focus on the importance of women's reproductive agency, and at the same time acknowledges the increasing significance of fetal subjects in public discourse and private experience. Essays address the public fascination with the fetal subject and its implications for abortion discourse and feminist commitment to reproductive rights in the United States. Contributors include scholars from fields as diverse as anthropology, communications, political science, sociology, and philosophy.

*Life Histories of Genetic Disease* Andrew J. Hogan, 2021-04-27 A richly detailed history that uncovers the challenges and limitations of our increasing reliance on genetic data in medical decision making (Shobita Parthasarathy, author of *Building Genetic Medicine*). Medical geneticists began mapping the chromosomal infrastructure piece by piece in the 1970s by focusing on what was known about individual genetic disorders. Five decades later, their infrastructure had become an

edifice for prevention, allowing expectant parents to test prenatally for hundreds of disease-specific mutations using powerful genetic testing platforms. In this book, Andrew J. Hogan explores how various diseases were made genetic after 1960, with the long-term aim of treating and curing them using gene therapy. In the process, he explains, these disorders were located in the human genome and became targets for prenatal prevention, while the ongoing promise of gene therapy remained on the distant horizon. In narrating the history of research that contributed to diagnostic genetic medicine, Hogan describes the expanding scope of prenatal diagnosis and prevention. He draws on case studies of Prader-Willi, fragile X, DiGeorge, and velo-cardio-facial syndromes to illustrate that almost all testing in medical genetics is inseparable from the larger—and increasingly big data-oriented—aims of biomedical research. Hogan also reveals how contemporary genetic testing infrastructure reflects an intense collaboration among cytogeneticists, molecular biologists, and doctors specializing in human malformation. Hogan critiques the modern ideology of genetic prevention, which suggests all pregnancies are at risk for genetic disease and should be subject to extensive genomic screening. He examines the dilemmas and ethics of the use of prenatal diagnostic information in an era when medical geneticists and biotechnology companies offer whole genome prenatal screening—essentially searching for any disease-causing mutation. Hogan's analysis is animated by ongoing scientific and scholarly debates about the extent to which the preventive focus in contemporary medical genetics resembles the aims of earlier eugenicists. Written for historians, sociologists, and anthropologists of science and medicine, as well as bioethics scholars, physicians, geneticists, and families affected by genetic conditions, *Life Histories of Genetic Disease* is a profound exploration of the scientific culture surrounding malformation and mutation.

**Introduction to Abnormal Child and Adolescent Psychology** Robert Weis, 2020-08-27 Reflecting the latest advancements in the field and complete DSM-5 criteria, Robert Weis' *Introduction to Abnormal Child and Adolescent Psychology* provides students with a comprehensive and practical introduction to child psychopathology. The book uses a developmental psychopathology approach to explore the emergence of disorders over time, describe the risks and protective factors that influence developmental processes and trajectories, and examine child psychopathology in relation to typical development and children's sociocultural context. The fully revised Fourth Edition includes a new chapter on research methods, a greater emphasis on the ways social-cultural factors affect each disorder covered, and recent research findings on topics such as autism spectrum disorder and adolescents' use of nicotine and marijuana vaping products.

*Underlying Mechanisms of Epilepsy* Fatima Shad Kaneez, 2011-09-26 This book is a very provocative and interesting addition to the literature on Epilepsy. It offers a lot of appealing and stimulating work to offer food of thought to the readers from different disciplines. Around 5% of the total world population have seizures but only 0.9% is diagnosed with epilepsy, so it is very important to understand the differences between seizures and epilepsy, and also to identify the factors responsible for its etiology so as to have more effective therapeutic regime. In this book we have twenty chapters ranging from causes

and underlying mechanisms to the treatment and side effects of epilepsy. This book contains a variety of chapters which will stimulate the readers to think about the complex interplay of epigenetics and epilepsy.

**Handbook of Categorization in Cognitive Science** Henri Cohen, Claire Lefebvre, 2017-06-03 Handbook of Categorization in Cognitive Science, Second Edition presents the study of categories and the process of categorization as viewed through the lens of the founding disciplines of the cognitive sciences, and how the study of categorization has long been at the core of each of these disciplines. The literature on categorization reveals there is a plethora of definitions, theories, models and methods to apprehend this central object of study. The contributions in this handbook reflect this diversity. For example, the notion of category is not uniform across these contributions, and there are multiple definitions of the notion of concept. Furthermore, the study of category and categorization is approached differently within each discipline. For some authors, the categories themselves constitute the object of study, whereas for others, it is the process of categorization, and for others still, it is the technical manipulation of large chunks of information. Finally, yet another contrast has to do with the biological versus artificial nature of agents or categorizers. - Defines notions of category and categorization - Discusses the nature of categories: discrete, vague, or other - Explores the modality effects on categories - Bridges the category divide - calling attention to the bridges that have already been built, and avenues for further cross-fertilization between disciplines
