Management Education in Canada Kristin S. Williams,Albert J Mills,Heidi Weigand,2025-05-23 Management Education in Canada: Historical Reflections offers a fresh and critical look at the evolution of management education in Canada. Nearly 25 years after the seminal work Capitalizing Knowledge by Barbara Austin, this edited collection revisits and expands upon the debates that shaped the field, while introducing new perspectives and overlooked histories. Featuring ten

scholarly essays from leading academics, this volume explores a range of critical and historiographic approaches to management education, highlighting the ways in which history is written, privileged, and, at times, neglected. Through a variety of themes, including the gendered experiences of female Ph.D. graduates, Africentric and Indigenous leadership approaches, and the role of globalization in shaping management curricula, the book prompts readers to reflect on the past, present, and future of management education in Canada. Chapters cover topics such as the influence of the Administrative Sciences Association of Canada, the underrepresentation of French- language business education, and the critical interrogation of management textbooks. Together, these chapters offer a rich and comprehensive analysis of the cultural, institutional, and intellectual forces shaping the discipline. This volume will engage scholars, educators, and students in business schools, faculties of management, and those interested in the broader history of higher education, as well as anyone seeking to understand the historical development of management education in Canada. It is an essential contribution to the ongoing conversation about what management education has been and what it could become.

Claiming the High Ground Stanley F. Stevens,1996 Stanley Stevens brings new ecological and historical perspectives to his study of a subsistence society in ever-increasing contact with the outside world. The Sherpas of the Mount Everest region, famous for their mountaineering exploits, have frequently been depicted as victims of the world`s highest-altitude tourist boom. But have the Sherpas and their homeland been transformed by tourism? He is the first to analyze the complex interaction of local environmental knowledge, cultural beliefs, and socio-economic and political conditions in changing sherpas subsistence strategies, land use practices, and local resources management institutions. Claiming the High ground is must reading for all those interested peoples and concerned about the conservation of the earth`s high places.

The Encyclopedia of the Industrial Revolution in World History Kenneth E. Hendrickson III,2014-11-25 As editor Kenneth E. Hendrickson, III, notes in his introduction: "Since the end of the nineteenth-century, industrialization has become a global phenomenon. After the relative completion of the advanced industrial economies of the West after 1945, patterns of rapid economic change invaded societies beyond western Europe, North America, the Commonwealth, and Japan." In The Encyclopedia of the Industrial Revolution in World History contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society. The Encyclopedia of the Industrial Revolution in World History is a three-volume work of over 1,000 entries on the rise and spread of the Industrial Revolution across the world. Entries comprise accessible but scholarly explorations of topics from the "aerospace industry" to "zaibatsu." Contributor articles not only address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization. Entries include generous selections of biographical figures and human communities, with articles on entrepreneurs, working men and women, families, and organizations. They also cover legal developments, disasters, and the environmental impact of the Industrial Revolution. Each entry also includes cross-references and a brief list of suggested readings to alert readers to more detailed information. The Encyclopedia of the Industrial Revolution in World History includes over 300 illustrations, as well as artfully selected, extended quotations from key primary sources, from Thomas Malthus' "Essay on the Principal of Population" to Arthur Young's look at Birmingham, England in 1791. This work is the perfect reference work for anyone conducting research in the areas of technology, business, economics, and history on a world historical scale.
