Windows Kill Process By PORT Number - Stack Overflow Mar 23, 2019 · Option 2 PowerShell Get-Process -Id (Get-NetTCPConnection -LocalPort portNumber).OwningProcess cmd C:\> netstat -a -b (Add -n to stop it trying to resolve hostnames, which will make it a lot faster.) -a Displays all connections and listening ports. -b Displays the executable involved in creating each connection or listening port. *How do I get only directories using Get-ChildItem?* Jun 21, 2010 · I'm using PowerShell 2.0 and I want to pipe out all the subdirectories of a certain path. The following command outputs all files and directories, but I can't figure out how to filter out the files... *Understanding .get() method in Python - Stack Overflow* The sample code in your question is clearly trying to count the number of occurrences of each character: if it already has a count for a given character, get returns it (so it's just incremented by one), else get returns 0 (so the incrementing correctly gives 1 ... *Get-ADGroupMember : The size limit for this request was exceeded* Sep 6, 2017 · The number of objects that Get-ADGroupMember can return is restricted by a limit in the ADWS (Active Directory Web Services): MaxGroupOrMemberEntries 5000 Specifies the maximum number of group members (recursive or non-recursive), group memberships, and authorization groups that can be retrieved by the Active Directory module Get ... *git config - How to know the git username and email saved during ...* Considering what @Robert said, I tried to play around with the config command and it seems that there is a direct way to know both the name and email. To know the username, type: git config user.name To know the email, type: git config user.email These two output just the name and email respectively and one doesn't need to look through the whole list. Comes in handy. *Why doesn't list have safe "get" method like dictionary?* Ultimately it probably doesn't have a safe .get method because a dict is an associative collection (values are associated with names) where it is inefficient to check if a key is present (and return its value) without throwing an exception, while it is super trivial to avoid exceptions accessing list elements (as the len method is very fast). **Understanding __get__ and __set__ and Python descriptors** Sep 26, 2010 · Non-data descriptors, instance and class methods, get their implicit first arguments (usually named self and cls, respectively) from their non-data descriptor method, __get__ - and this is how static methods know not to have an implicit first argument. *How do I find out which process is listening on a TCP or UDP port ...* The default output of Get-NetTCPConnection does not include Process ID for some reason and it is a bit confusing. However, you could always get it by formatting the output. The property you are looking for is OwningProcess. If you want to find out the ID of the process

that is listening on port 443, run this command: **typescript - Angular, Http GET with parameter? - Stack Overflow** I dont know how to make an API call to such a method: [HttpGet] [ActionName("GetSupport")] public HttpResponseMessage GetSupport(int projectid) Because it is GET but still got a parameter to pass,... [How to recover stashed uncommitted changes - Stack Overflow](#) May 25, 2018 · I had some uncommitted changes in my development branch and I stashed them using git stash, but there were some changes which were very important among those stashed ones.
