Atlas de Histología Martín-Lacave, Inés,2020-09-30 Este Atlas de Histología. Microscopía óptica y electrónica está especialmente dirigido a los estudiantes que cursan las diferentes asignaturas de Histología en los Grados de Medicina, Biomedicina, Odontología y Podología, aunque también puede ser de gran utilidad en los estudios de Biología, Veterinaria y campos afines. Se trata de una verdadera “guía visual” de la estructura microscópica del cuerpo humano, imprescindible para la comprensión y seguimiento de las sesiones tanto teóricas como prácticas de Histología y de gran utilidad como complemento a los libros de texto existentes sobre esta materia. La confección del presente atlas está inspirada en una de las obras más bellas que se hayan concebido en Histología, An Atlas of Human Histology, publicada por Mariano S.H. di Fiore en 1957 y reeditada en numerosas ocasiones; el atlas lo formaban Láminas Histológicas cuyos originales habían sido pintados a la acuarela, reproduciendo fielmente la estructura de los distintos tejidos y órganos vistos al microscopio óptico, y en las que se señalaban con rótulos los detalles histológicos más relevantes. Basándonos en dicha idea, hemos elaborado este Atlas de Histología. Microscopía óptica y electrónica, que consta de 365 Láminas Histológicas confeccionadas cada una de ellas con una serie de microfotografías que se ordenan de tal modo que pueda identificarse la estructura histológica de un mismo tejido u órgano a aumentos progresivos, y en las que se especifica cada detalle significativo mediante un rótulo. Para la

preparación de este libro hemos partido de una versión anterior, el Atlas de Histología Humana, publicado por la editorial Díaz de Santos en el año 2014, que contenía exclusivamente imágenes de microscopía óptica (M.O.), procedentes de tejidos humanos incluidos en parafina y teñidos con técnicas histológicas clásicas (Hematoxilina-Eosina, tricrómicos, orceína, Verhoeff, reticulina, métodos de impregnación metálica, PAS, etc.), así como, en menor proporción, con técnicas inmunohistoquímicas (IHQ). Con todo, y aun tratándose de un trabajo realizado con el mayor rigor, siempre fuimos conscientes de sus limitaciones, pues carecía de imágenes de microscopía electrónica, tanto de transmisión como de barrido, así como de suficientes imágenes de IHQ, sobre todo teniendo en cuenta la gran expansión e importancia que ésta ha cobrado durante los últimos años en el análisis de los tejidos. Por todo ello, desde el mismo momento de su publicación, comenzamos a trabajar en la preparación de un nuevo atlas de histología, que siguiera el mismo formato de ordenación en láminas, pero procurando que fuera lo más completo posible, incluyendo tanto los métodos de tinción clásicos referidos para M.O., como numerosas microfotografías de IHQ, Microscopía Electrónica de Transmisión (M.E.T.), y Microscopía Electrónica de Barrido (M.E.B.), para tratar de convertirlo en un verdadero atlas de referencia para los estudiosos de la Histología.

Resident Stem Cells and Regenerative Therapy Regina Coeli dos Santos Goldenberg,Antonio Carlos Campos de Carvalho,2023-09-07 Resident Stem Cells and Regenerative Therapy: Sources and Clinical Applications, Second Edition presents the main findings to date and the important factors to be considered when contemplating resident stem cells in regenerative therapies. Chapters on cardiac, brain, neural, liver, kidney, skeletal muscle, bone, pancreatic, skin and lung resident stem cells will assist in defining the level of success that has been achieved and the direction for the road ahead. With contributions from leading laboratories, open questions related to resident stem cells and regenerative therapies will also be presented for debate. In the last several decades, stem cells have greatly impacted the scientific and lay communities, providing huge advances in the treatment of devastating human diseases, including myocardial infarction, diabetes, muscular dystrophy, cystic fibrosis, cirrhosis, and osteoporosis. Alongside debates of induced pluripotent stem cells and embryonic stem cells has been the discovery of adult stem cells in many different tissues. While these organ resident or progenitor stem cells offer prospects to contribute to tissue regeneration, they also present challenges because of the complexity of organ structures. - Highlights basic research in tissue specific stem cells, experiments with animal models, and clinical trials that are transforming the field of regeneration - Provides a clear understanding of endogenous stem cells, their role in current regenerative therapies, and prospects for future research - Reports on the main-stream clinical approaches and in vivo experiments published in primary literature to help categorizes the advances in various aspects of regenerative therapy and

illustrate opportunities for clinical applications

Fertility, Pregnancy, and Wellness Diana Vaamonde, Anthony C. Hackney, Juan Manuel Garcia-Manso, 2022-02-09 Fertility, Pregnancy, and Wellness is designed to bridge science and a more holistic approach to health and wellness, in particular, dealing with female-male fertility and the gestational process. Couples seeking to solve fertility issues for different reasons, whether failed assisted reproductive techniques or the emotional impact they entail, economic or moral reasons, are demanding more natural ways of improving fertility. This book explores the shift in paradigm from just using medications which, in the reproductive field, can be very expensive and not accessible to the entire population, to using lifestyle modifications and emotional support as adjunctive medicine therapies. This must-have reference brings together the current knowledge - highlighting the gaps - and delivers an important resource for various specialists and practitioners. - Offers insights from scientific and holistic methods, providing the available scientific evidence for (or against) different holistic approaches, aimed at improving fertility, health and wellness - Bridges the more 'peripheral', yet critical and multidisciplinary, considerations in fertility, infertility, pregnancy and wellness - Includes clear, concise and meaningful summary conclusion sections within each chapter

Reações teciduais frente à movimentação dentária ortodóntica e suas implicações clínicas Editora PUC Minas, 2023-12-19 A ortodontia é uma área da Odontologia que aborda o estudo do crescimento do complexo craniofacial, do desenvolvimento da oclusão e do tratamento de anomalias dento-faciais. As intervenções ortodônticas ocorrem em um ambiente biológico, onde forças aplicadas aos dentes têm a capacidade de gerar alterações nos tecidos circundantes, como

osso alveolar, ligamento periodontal e gengiva e, por meio da indução da remodelação óssea, movimentar os dentes, processo denominado movimentação dentária ortodôntica (MDO). Embora estudada por muitas décadas, a biologia da MDO continua sendo foco de intensas investigações e, apesar de diariamente os ortodontistas promoverem a MDO, os mecanismos biológicos envolvidos nesse processo ainda não são totalmente compreendidos. Portanto, o aprofundamento do conhecimento a respeito da biologia da MDO e de suas implicações clínicas é relevante para o adequado planejamento e execução do tratamento ortodôntico, bem como para a prevenção de possíveis danos indesejáveis aos tecidos dentários e de suporte.

Cartilage Repair and Regeneration Alessandro Rozim Zorzi, João Batista de Miranda, 2018-02-14 This work is the result of a partnership that began in 2011, when I received for the first time the invitation to be the scientific editor of a book on bone grafting, by the still little publisher known as InTech. Now six years later, InTech has grown and thrived. My respect and warm approval for the quality of the publisher's work only increased. The hyaline cartilage is a tissue that challenges tissue engineering and regenerative medicine because of its avascular nature. In the 11 chapters of this book, the reader will find texts written by researchers working on advanced topics related to basic laboratory research, as well as excellent reviews on the clinical use of currently available therapies.

Benefits of medical cannabis in Glaucoma Pharmacology University,2021-09-23 Glaucoma and cannabis? If the association of the two seems crazy to you, then this ebook is for you. Firstly, what is glaucoma? ... Glaucoma is an eye disease that has among its final consequences the loss of vision, generally bilateral. Statistically speaking, it is one of the leading causes of blindness worldwide. And what does it have to do with cannabis?. Well, during the 1970's, it was observed that regular cannabis users had low intraocular pressure figures. This finding was associated with the theory that medical cannabis could have an especially important beneficial effect for glaucoma patients. Fifty years have passed since this observation, and the issue is still debated today. Vision is one of the most important senses for the daily life of a human being, it is a complex neurological process, susceptible to damage through various mechanisms. For its part, glaucoma is a disease whose medical treatment has not been fully established, and for which various alternative therapies have been proposed, none of which has scientifically proven their effectiveness. The influence of cannabis on intraocular pressure has been a topic of medical interest for decades, so the available scientific information is abundant, although the conclusions are not entirely consistent. Therefore, its usefulness in management has not been officially established with glaucoma. Despite this, there are observations and findings that describe an interesting role for cannabinoids on the pathological mechanism of glaucoma. In this sense, through this audiobook, a comprehensive tour is offered through some relevant aspects of glaucoma and its presumed relationship with medicinal cannabis. We begin with a recollection of the wonders implicit in the anatomical structure of the eye and in the physiological bases of its normal functioning, to then address the pathological aspects of glaucoma, knowing along the way the processes through which this disease causes an irreversible loss of vision. Having known this, the next thing you will find are the characteristics and functions of the endocannabinoid system in the eye. Did you know of its existence? It is a set of cell receptors susceptible to stimulation by cannabinoids such as THC and

CBD, whose effects on the eye are extremely interesting.
