**Twisted Documentation: Test-driven development with Twisted** Testing protocols without the use of real network connections is both simple and recommended when testing Twisted code. Even though there are many tests in Twisted that use the network, most good tests don't. The problem with unit tests and networking is that networks aren't reliable. **Twisted Documentation: The Basics** These take a Twisted Application file (of any of the supported formats — Python source, XML or pickle), and build a Debian or RPM package (respectively) that installs the Application as a system service. Twisted Documentation: Writing Servers This document explains how you can use Twisted to implement network protocol parsing and handling for TCP servers (the same code can be reused for SSL and Unix socket servers). Twisted Twisted makes it easy to implement custom network applications. Here's a TCP server that echoes back everything that's written to it: Choosing a Reactor and GUI Toolkit Integration - Twisted Twisted provides a variety of implementations of the `twisted.internet.reactor`. The specialized implementations are suited for different purposes and are designed to integrate better with particular platforms. Examples — Twisted 25.5.0 documentation `stdiodemo.py` - example using `stdio`, `Deferreds`, `LineReceiver` and `twisted.web.client`. `ptyserv.py` - serve shells in pseudo-terminals over TCP `courier.py` - example of interfacing to Courier's mail filter interface `longex.py` - example of doing arbitrarily long calculations nicely in Twisted `longex2.py` - using generators to do long calculations
