

Fonctionnement Du Moteur Stirling

Pascal Clavier

Systèmes énergétiques Gérard Sarlos, Pierre-André Haldi, Pierre Verstraete, 2003-01-01

Systèmes énergétiques Renaud Gicquel, 2009 Le premier tome de ce livre propose une méthode d'apprentissage originale et simplifiée de la thermodynamique appliquée aux systèmes énergétiques, aujourd'hui utilisée dans une vingtaine d'écoles d'ingénieurs et universités européennes. Ce second tome dédié aux applications industrielles met en application cette approche s'appuyant sur les TIC. Il a une double finalité : - fournir au lecteur une vision d'ensemble des différentes technologies de conversion de l'énergie, et l'aider à en comprendre les récentes évolutions et les principes de conception : turbines à gaz et cycles combinés, propulseurs aéronautiques, moteurs diesel et à essence, moteurs Stirling, installations motrices à vapeur, cogénération, machines frigorifiques, pompes à chaleur, installations de climatisation. - faire le lien par la modélisation entre cette réalité technologique et les bases théoriques du génie énergétique, en montrant au lecteur comment construire ses propres modèles grâce à une plateforme d'expérimentations virtuelles développée par l'auteur (Thermoptim) dont une version est téléchargeable gratuitement. 33 exemples illustrent cette démarche. Ce livre constitue le cours dispensé aux élèves de l'Ecole.

Chapitre 5 - Moteurs à apport de chaleur externe Georges DESCOMBES, Bernard DESMET, 2023-03-01 Les moteurs à combustion externe, essentiellement utilisés pour des applications spécifiques spatiales ou militaires, retrouvent un gain d'intérêt du fait des progrès techniques et de leur capacité à utiliser des sources de chaleur variées. Les principes et les analyses thermodynamiques des moteurs Stirling et Ericsson sont présentés. Mots-clés : Stirling, Ericsson, combustion externe, cogénération, décarbonation. DOI : 10.51926/ISTE.9075.ch5

Thermodynamique des moteurs thermiques Bernard Desmet, 2023-03-01 L'optimisation énergétique des moteurs thermiques constitue un enjeu majeur pour la préservation des ressources énergétiques et la protection de l'environnement en limitant les émissions de polluants et de gaz à effet de serre. Dans ce contexte, en utilisant l'approche thermodynamique, Thermodynamique des moteurs thermiques étudie les phénomènes de conversion d'énergie des moteurs thermiques. Les analyses s'étendent de l'énergie primaire utilisée jusqu'à la valorisation de la chaleur fatale. Les bases nécessaires à la compréhension de l'analyse thermodynamique de la combustion et de la conversion de chaleur en travail mécanique sont présentées. Ces analyses s'appliquent aussi bien aux moteurs des systèmes de transport (véhicules routiers et ferroviaires,

aéronautique et espace) que ceux des installations fixes (systèmes de cogénération, centrales à cycles combinés).

Les grandes inventions de l'humanité Gerald Messadié, 1988-01-01 T00:00:00+01:00 De l'imaginaire au réel, du tâtonnement au viable et au fiable : les inventions qui ont bouleversé notre vie quotidienne. De l'École d'Alexandrie à la technologie chinoise, de la Renaissance au milieu du XIXe siècle, plus de 300 instruments techniques, qui témoignent de l'effort fait par l'homme pour s'adapter à son environnement. Du moulin à vent à l'hélicoptère de Léonard de Vinci (en passant par la vis d'Archimède), de l'éolypile à la machine à vapeur, de l'allumette à l'ampoule électrique, de la poudre à la mitrailleuse, tous les moyens ingénieux de mieux vivre – ou de se détruire ! Dans tous les domaines de l'activité humaine : agriculture, médecine, communication, chimie, loisirs, art militaire...

Chapitre 3 - Thermodynamique à vitesse finie Stoian PETRESCU, Monica COSTEA, 2024-10-10 Ce chapitre porte sur la thermodynamique à vitesse finie. Cette démarche qui combine le 1er et 2nd principe pour les processus à vitesse finie aboutit à la méthode dite directe. Elle est appliquée aux moteurs de Stirling, Carnot, Otto, diesel. Il en résulte une étude analytique de la puissance optimale et l'efficacité du moteur. On insiste sur la production d'entropie par forfait ou ratio. Mots-clés : méthode directe, vitesse finie, thermodynamique, puissance, rendement. DOI : 10.51926/ISTE.9126.ch3

Mars Viorel Badescu, 2009-12-07 Mars, the Red Planet, fourth planet from the Sun, forever linked with 19 and 20 Century fantasy of a bellicose, intelligent Martian civilization. The romance and excitement of that fiction remains today, even as technologically sophisticated robotic orbiters, landers, and rovers seek to unveil Mars' secrets; but so far, they have yet to find evidence of life. The aura of excitement, though, is justified for another reason: Mars is a very special place. It is the only planetary surface in the Solar System where humans, once free from the bounds of Earth, might hope to establish habitable, self-sufficient colonies. Endowed with an insatiable drive, focused motivation, and a keen sense of exploration and adventure, humans will undergo the extremes of physical hardship and danger to push the envelope, to do what has not yet been done. Because of their very nature, there is little doubt that humans will in fact conquer Mars. But even earth-bound extremes, such as those experienced by the early polar explorers, may seem like a walk in the park compared to future experiences on Mars.

L'Énergie Jean Pierre Brasebin, 2024-04-02 Cet ouvrage vous donnera toutes les clés de compréhension nécessaires pour aborder le thème de l'énergie et de ses usages. Vous en traverserez l'histoire et en traiterez les aspects physiques, sociaux, climatiques, le tout sans omettre les techniques de production et de stockage, ni oublier les ressources qui sont utilisées.

L'énergie a beau être invisible, ses effets sont concrets. Nous en parlons tous, nous en consommons sans cesse mais qu'en savons-nous réellement ? L'auteur, universitaire et ingénieur, en faisant le point sur la situation, vous propose de répondre à cette question. Ce sujet parfois difficile est abordé avec des mots simples, sans calcul. Il est illustré par de nombreux dessins qui facilitent la compréhension. Ce livre accompagnera les élèves et les étudiants dans la préparation de leurs examens et concours. En plus de nourrir la réflexion, il interroge sur les crises énergétiques. Pourraient-elles réellement remettre en question la survie de la planète ?

Physique - Licence - BUT - Thermodynamique Pascal Clavier, 2024-05-28 Cet ouvrage sera un outil de révision précieux pour les étudiants de licence ainsi que ceux de BUT. Il aborde les thèmes de thermodynamique ainsi que de transferts thermiques. Chaque chapitre est composé de la façon suivante : Un rappel de cours sur les notions fondamentales à maîtriser. Des exercices souvent incontournables qui mettent en valeur l'application de ces notions. Des corrigés détaillés qui permettent à l'étudiant de bien assimiler la mise en œuvre de ces notions. Un ou plusieurs partiels corrigés pour aider l'étudiant à s'entraîner pour le jour J de l'examen.

Avancées en thermodynamique et thermoéconomie circulaire Michel Feidt, Antonio Valero-Capilla, 2024-10-10 Avancées en thermodynamique et thermoéconomie circulaire traite de deux composantes essentielles de la physique de l'énergie : les fondements et les critères. Dans la première partie, les auteurs couvrent la base historique des modèles de Carnot, les cycles thermostatiques des pompes à chaleur à double fonction et l'optimisation des moteurs thermomécaniques. Ils discutent des résultats de diverses recherches, rassemblant notamment un certain nombre de travaux antérieurs. Dans la seconde partie, le concept de « thermoéconomie circulaire » est introduit et les coûts physiques du recyclage des déchets sont évalués à travers des processus industriels de plus en plus complexes. L'énergie libre relative est présentée, ce qui permet de créer une nouvelle théorie mathématique des coûts thermodynamiques afin de diagnostiquer les dysfonctionnements des systèmes thermiques. L'ouvrage étudie l'évolution des connaissances sur l'existence des énergies successives, de la puissance et de l'efficacité, et les associe aux aspects économiques qui sont déjà liés aux préoccupations environnementales croissantes.

Physique L1 Max Brunel (docteur en physique.), Nelly Burle, Laurence Chérigier-Kovacic, Odile Chevalier, Karine Coulié, Gilles Micolau, Julie Patris, 2015-01-09 Manuel couvrant l'ensemble des notions au programme (les mesures,

l'électronique, la lumière, la mécanique du point, la thermodynamique, la physique mathématique), avec une mise en contexte, des encadrés, des définitions, des exemples, des exercices et des problèmes corrigés.
