El salvado de arroz: procesos de estabilización y usos potenciales en la industria colombiana Vargas, Edgar Mauricio, Aguirre, Marisol, 2011-12-16 La cadena productiva del arroz es una importante fuente generadora de empleo. A nivel de cultivo, el III Censo Nacional Arrocerero realizado en 2007 identificó la existencia de 12.414 productores y 17.352 unidades productoras de arroz (UPA) empleando en forma directa a 65.000 personas. Por su parte, en el país existen cerca de 90 empresas procesadoras de arroz que emplean de forma directa a 4.650 personas y financian cerca del 30% del área sembrada de arroz. La mayor parte de la capacidad instalada de la molinería de arroz de Colombia tiene un desarrollo tecnológico avanzado (en molienda y secado) si se compara con los estándares tecnológicos registrados por Estados Unidos, Brasil, Uruguay y Venezuela. El principal producto del proceso de molinería es el arroz blanco, seguido por subproductos como la cascarilla y el salvado de arroz (SA), y el arroz partido, grande y pequeño. El arroz es un cultivo social y económicamente importante para el país por su alta participación en el área cosechada, en el valor de la producción agrícola y, como se había mencionado anteriormente, en la generación de empleo. En el año 2009, en Colombia se cultivaron 468.892 hectáreas (Ha) con una producción de 2'363.519 toneladas métricas (Tm) de arroz paddy seco, equivalente a cerca de 1'607.719 Tm de arroz blanco. El arroz es el tercer cultivo agrícola en extensión después del café y el maíz. Representa el 13% del área cosechada en Colombia y el 30% de los cultivos transitorios. Su producción representa el 6% del valor de la producción agropecuaria y el 10% de la actividad agrícola colombiana. El valor generado por este producto es equivalente al 58% del valor constituido por el cultivo del café.

Procesos de elaboración de alimentos y bebidas SÁNCHEZ PINEDA DE LAS INFANTAS, M.T., 2003-01-01 Hacia finales del siglo XIX el incremento del conocimiento científico permitió la transformación de la industria artesanal en una industria basada en el conocimiento científico, fenómeno que todavía se persigue en la actualidad. Fue en ese momento cuando se puede considerar que nacieron las Industrias Agrarias. Las Industrias Agrarias emplean fundamentalmente materias primas de origen vegetal o animal cuyas características las hacen fácilmente alterables o degradables. Se trata de materias vivas antes o incluso a veces durante el procesado, cuyos componentes orgánicos constituyen un medio de vida adecuado para el desarrollo microbiano y un sustrato apto para la acción enzimática y el desequilibrio de componentes constitutivos con

posibilidad de modificación sensorial y nutricional. Por otra parte, presentan siempre una considerable dispersión en sus propiedades y características tanto en el tiempo como en el espacio lo cual es un grave inconveniente a la hora de elaborar productos que deban responder a una adecuada homogeneidad y ser estables durante el almacenamiento. La obra ha sido dividida en secciones dedicadas a los principales tipos de industrias. En cada uno de los capítulos que componen estas secciones, he abordado el estudio y conocimiento de las materias primas y de los productos elaborados, la ingeniería de diseño y de los procesos elegidos, así como la implantación del sistema APPCC en cada una de las industrias seleccionadas.

REVOLUCIÓN RETAIL. Innovación y tecnología en el comercio minorista Manuel Sieira Valpuesta,José Manuel Ponzoa Casado,2024-09-24 Revolución retail pretende acercarse a un sector abocado a una evolución, al acercamiento a una

realidad marcada por nuevos parámetros de comportamiento, al uso masivo de los teléfonos inteligentes, o a nuevos estilos de vida que han supuesto auténticas revoluciones en los procesos comerciales. Sieira y Ponzoa proponen esta obra, no para estudiar el funcionamiento de las empresas que basan su razón de ser en el comercio electrónico, sino como una guía para aquellos comerciantes, que además de integrar su comercialización online, están dispuestos a adaptar su estructura de tiendas físicas a las nuevas demandas exigidas por el e-commerce. El proceso de transformación digital está en marcha, pero quizás, no todos los comercios estén sabiendo adaptarse al cambio para aprovechar sus múltiples oportunidades. Índice: Introducción.- Fórmulas comerciales.- Comportamiento de los consumidores.- Tiendas. Factores de preferencia.- Elementos de riesgo para las tiendas.- Cambios en los modelos operativos.- Adaptaciones.- Operadores online. Pure players.- Las entregas. Pasta and Semolina Technology Ron Kill,K. Turnbull,2008-04-15 Over the last few years the technologies employed in the production of dry pasta and semolina have changed dramatically. This highly practical book examines these changes and gives commercially relevant information to the reader in the areas of durum wheat, semolina production, pasta mixing and extrusion, shape design and quality assurance. Written principally for food technologists working with pasta as an end product or as an ingredient, this book is also an essential reference source for academic, research and teaching institutions.

Bioproductos a partir de residuos agroindustriales María Guadalupe Bustos Vázquez,Daniel Trujillo Ramírez,2024-11-04 La actividad agroindustrial es de gran importancia para la economía de un país por sus repercusiones en el sector agropecuario y en la actividad industrial. El desarrollo y fortalecimiento de las empresas agroindustriales depende de factores legales, administrativos, de mercado, técnicos, financieros y del soporte que, a través del Estado y sector privado, pueda tener la actividad, particularmente en la generación de materia prima que satisfaga los requisitos de cantidad y calidad. El uso de los residuos que se generan en la agroindustria representa una alternativa viable para la obtención de nuevos productos con alto valor agregado. Estos residuos provenientes de los diferentes procesos industriales (alimentarios o agrícolas) generalmente ya no son de gran interés para el empresario o productor por lo que son considerados como desechos sin otra utilidad lo que ocasiona un impacto negativo generando diversos problemas medioambientales. Sin

embargo, éstos pueden ser materia prima con gran potencial para desarrollar productos biotecnológicos. La obtención de estos compuestos revalorizaría así una fracción de desecho, y originaría compuestos útiles en el campo alimentario, médico, o en el sector químico. A través de biotecnología se utilizan microorganismos para la bioconversión de estos residuos en productos de interés comercial. Además del interés económico que ello supone para la producción de productos de mayor valor añadido (enzimas, proteína unicelular, pigmentos, antibióticos, etc.). La utilización de subproductos agroindustriales tiene incidencias en la preservación de la calidad del medio ambiente al considerar el desarrollo de tecnologías orientadas hacia una transformación sustentable de los recursos naturales
