ECAI 2002 Frank Van Harmelen,2002 This volume contains the 137 papers accepted for presentation at the 15th European Conference on Artificial Intelligence (ECAI '02), which is organized by the European Co-ordination Committee on Artificial Intelligence.

SPS2020 K. Säfsten,F. Elgh,2020-12-24 Knowledge-intensive product realization implies embedded intelligence; meaning that if both theoretical and practical knowledge and understanding of a subject is integrated into the design and production processes of products, this will significantly increase added value. This book presents papers accepted for the 9th Swedish Production Symposium (SPS2020), hosted by the School of Engineering, Jönköping University, Sweden, and held online on 7 & 8 October 2020 because of restrictions due to the Corona virus pandemic. The subtitle of the conference was Knowledge Intensive Product Realization in Co-Operation for Future Sustainable Competitiveness. The book contains the 57 papers accepted for presentation at the conference, and these are divided into nine sections which reflect the topics covered: resource efficient production; flexible production; virtual production development; humans in production systems; circular production systems and maintenance; integrated product and production development; advanced and optimized components, materials and manufacturing; digitalization for smart products and services; and responsive and efficient operations and supply chains. In addition, the book presents five special sessions from the symposium: development of changeable and reconfigurable production systems; smart production system design and development; supply chain relocation; management of manufacturing digitalization; and additive manufacturing in the production system. The book will be of interest to all those working in the field of knowledge-intensive product realization.

Universal Access in Human-Computer Interaction. Applications and Services Constantine Stephanidis,2009-07-14 The 13th International Conference on Human–Computer Interaction, HCI Inter- tional 2009, was held in San Diego, California, USA, July 19–24, 2009, jointly with the Symposium on Human Interface (Japan) 2009, the 8th International Conference on Engineering Psychology and Cognitive Ergonomics, the 5th International Conference on Universal Access in Human-Computer Interaction, the Third International Conf- ence on Virtual and Mixed Reality, the Third International Conference on Internati- alization, Design and Global Development, the Third International Conference on Online Communities and Social Computing, the 5th International Conference on Augmented Cognition, the Second International

Conference on Digital Human Mod- ing, and the First International Conference on Human Centered Design. A total of 4,348 individuals from academia, research institutes, industry and gove- mental agencies from 73 countries submitted contributions, and 1,397 papers that were judged to be of high scientific quality were included in the program. These papers - dress the latest research and development efforts and highlight the human aspects of the design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human–computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas.

Artificial Intelligence in Industry 4.0 Alexiei Dingli,Foaad Haddod,Christina Klüver,2021-02-27 This book is intended to help management and other interested parties such as engineers, to understand the state of the art when it comes to the intersection between AI and Industry 4.0 and get them to realise the huge possibilities which can be unleashed by the intersection of these two fields. We have heard a lot about Industry 4.0, but most of the time, it focuses mainly on automation. In this book, the authors are going a step further by exploring advanced applications of Artificial Intelligence (AI) techniques, ranging from the use of deep learning algorithms in order to make predictions, up to an implementation of a full-blown Digital Triplet system. The scope of the book is to showcase what is currently brewing in the labs with the hope of migrating these technologies towards the factory floors. Chairpersons and CEOs must read these papers if they want to stay at the forefront of the game, ahead of their competition, while also saving huge sums of money in the process.

Facilitator's Fieldbook, The Tom Justice,2006 Getting teams and groups to function productively is a challenge. For years The Facilitator's Fieldbook has been giving group leaders what they need to make everything run more smoothly. Now fully updated, the Second Edition is truly jam-packed with step-by-step procedures, checklists and guidelines, samples and templates, and more. For managers, trainers, and group leaders in any industry, The Facilitator's Fieldbook is a practical, powerful book that will keep teams and groups humming along and getting results.

Planning Support Systems in Practice Stan Geertman,John Stillwell,2012-11-02 Planning Support Systems: Technologies that are Driving Planning Michael Batty Centre for Advanced Spatial Analysis (CASA), University College London, 1-19 Torrington Place, London WC 1 E 6BT, United Kingdom I had always thought the term 'Planning Support Systems', abbreviated to PSS, had been coined by the father of land use modelling, Britton Harris, in his article 'Beyond Geographic Information Systems: computers and the planning professional' published in the Journal of the American Planning Association in 1989 (Harris 1989). Until I asked hirn, that iso In a response to a paper he gave to the Urban and Regional Information Systems Association (URISA) in the summer of 1987, he told me that someone in the audience who he cannot quite remember, actually coined the term, referring to 'planning support systems' as that constellation of digital

techniques (such as GIS) which were emerging to support the planning process. In fact, the predecessor term 'decision support systems' (DSS) from which this unknown originator obviously defined PSS by analogy, was coined as far back as the late 1970s in the management literature for a loose assemblage of techniques, usually computer-based, which aided management decisions. The term slowly entered the geographicallexicon as 'spatial decision support systems' (SDSS) and this is probably first attributable to Lew Hopkins and Mark Armstrong who used it in a paper published in AutoCarto 7 in 1985 (Hopkins and Armstrong 1985).

Handbook on Decision Support Systems 1 Frada Burstein,Clyde W. Holsapple,2008-01-22 Decision support systems have experienced a marked increase in attention and importance over the past 25 years. The aim of this book is to survey the decision support system (DSS) field – covering both developed territory and emergent frontiers. It will give the reader a clear understanding of fundamental DSS concepts, methods, technologies, trends, and issues. It will serve as a basic reference work for DSS research, practice, and instruction. To achieve these goals, the book has been designed according to a ten-part structure, divided in two volumes with chapters authored by well-known, well-versed scholars and practitioners from the DSS community.

Managing Knowledge Resources and Records in Modern Organizations Jain, Priti,Mnjama, Nathan,2016-12-21 Modern organizations and businesses are growing rapidly every day. With these advances comes the need for more progressive forms of knowledge management and record keeping techniques. Managing Knowledge Resources and Records in Modern Organizations is a pivotal reference source that discusses the current trends, technologies, and ethics associated with knowledge management. Featuring comprehensive coverage on a spectrum of topics, such as leadership roles in knowledge sharing, knowledge governance, electronic resources for public sector reform, and record keeping for information in public and private sector organizations, this publication is a comprehensive resource for educators, professionals, practitioners, academics, and researchers interested in the latest information on knowledge management for business and organizations.

Polyphonic Construction of Smart Learning Ecosystems Mihai Dascalu,Patrizia Marti,Francesca Pozzi,2022-09-27 The book brings together the contributions of the 7th International Conference on Smart Learning Ecosystems and Regional Development (SLERD 2022), which aims at promoting reflection and discussion concerning R&D work, policies, case studies, and entrepreneur experiences with a special focus on understanding the relevance of smart learning ecosystems (e.g., schools, campus, working places, informal learning contexts, etc.) for regional development and social innovation and how the effectiveness of the relation of citizens and smart ecosystems can be boosted. This forum has a special interest in understanding how technology mediated instruments can foster the citizen's engagement with learning ecosystems and territories, namely by understanding innovative human-centric design and development models/techniques, education/training practices, informal social learning, innovative citizen-driven policies, technology mediated experiences,

and their impact. This set of concerns will contribute to foster the social innovation sectors and ICT and economic development and deployment strategies alongside new policies for smarter proactive citizens.

How to Make Collaboration Work David A Straus,2002-10-02 Every day we work with others to solve problems and make decisions, but the experience is often stressful, frustrating, and inefficient. In How to Make Collaboration Work, David Straus, a pioneer in the field of group problem solving, introduces five principles of collaboration that have been proven successful time and again in nearly every conceivable setting. Straus draws on his thirty years of personal and professional experience to show how these principles have been applied by organizations as diverse as Ford Motor Company, the U.S. Environmental Protection Agency, Harvard Business School Publishing, Boston Public Schools, Kaiser Permanente, the city of Denver, and many others. How to Make Collaboration Work shows how collaboration can become a joy rather than a chore-a kind of chemical reaction that releases far more energy than it consumes.

The Timespace of Human Activity Theodore R. Schatzki,2010-04-12 This book shows that a concept of activity timespace drawn from the work of Martin Heidegger provides new insights into the nature of activity, society, and history. Although the book is a work of theory, it has significant implications for the determination and course, not just of activity, but of sociohistorical change as well. Drawing on empirical examples, the book argues (1) that timespace is a key component of the overall space and time of social life, (2) that interwoven timespaces form an essential infrastructure of important social phenomena such as power, coordinated actions, social organizations, and social systems, and (3) that history encompasses constellations of indeterminate temporalspatial events. The latter conception of history in turn yields a propitious account of how the past exists in the present. In addition, because the concept of activity timespace highlights the teleological character of human action, the book contains an extensive defense of the teleological character of such allegedly ateleological forms of activity as emotional and ceremonial actions. Since, finally, the book's ideas about timespace and activity as an indeterminate event derive from an interpretation of Heidegger, the work furthers understanding of the relevance of his thought for social and historical theory. The book combines textual interpretation, theoretical argumentation, and empirical substantiation. Many of its empirical examples are taken from the Blue Grass Horse Country around Lexington, Kentucky, where the author resides.

Learning Together Online Starr Roxanne Hiltz,Ricki Goldman,2004-09-22 This book is about the past and future of research on the effectiveness of learning networks (also known as e-learning or online learning or Web-based learning). Learning networks are groups of people using computer technology, communicating and collaborating online to build knowledge together. Over the past decade there has been an explosion not only of online courses, but also of studies on them. In Learning Together Online: Research on Asynchronous Learning Networks, leading researchers in the field use an integrated theoretical framework, which they call Online Interaction Learning Theory, to organize what past research shows

and where future research is going. It models the variables and processes that are important in determining the relative effectiveness of online learners working to reach a deeper level of understanding by interacting with each other and with the texts under investigation. Now that there have been hundreds of studies and thousands of courses offered online, what does the empirical evidence show? This book addresses the question directly by presenting what is known from research results about how to design and teach courses effectively online, ranging from the organizational context and characteristics of students to learning theories and research design methods. It also provides a research agenda for the next decade. Learning Together Online: Research on Asynchronous Learning Networks is both a textbook for graduate students and a professional reference for faculty teaching online, researchers conducting studies, and graduate students taking courses about learning technologies who need to know the state of the art of research in the area of online learning.

Get There Early Bob Johansen,2007-08 Helps leaders make sense out of mounting dilemmas. This book includes a map to the decade of dilemmas that we can already taste in events, drawing from the Ten-Year Forecast by Institute for the Future - which has a thirty-eight year track record.

A Treatise on Time and Space J. R. Lucas,2018-10-10 Originally published in 1976. This comprehensive study discusses in detail the philosophical, mathematical, physical, logical and theological aspects of our understanding of time and space. The text examines first the many different definitions of time that have been offered, beginning with some of the

puzzles arising from our awareness of the passage of time and shows how time can be understood as the concomitant of consciousness. In considering time as the dimension of change, the author obtains a transcendental derivation of the concept of space, and shows why there has to be only one dimension of time and three of space, and why Kant was not altogether misguided in believing the space of our ordinary experience to be Euclidean. The concept of space-time is then discussed, including Lorentz transformations, and in an examination of the applications of tense logic the author discusses the traditional difficulties encountered in arguments for fatalism. In the final sections he discusses eternity and the beginning and end of the universe. The book includes sections on the continuity of space and time, on the directedness of time, on the differences between classical mechanics and the Special and General theories of relativity, on the measurement of time, on the apparent slowing down of moving clocks, and on time and probability.

New Perspectives on CALL for Second Language Classrooms Sandra Fotos,Charles M. Browne,2013-06-17 This practical handbook is designed to help language teachers, teacher trainers, and students learn more about their options for using computer-assisted language learning (CALL) and develop an understanding of the theory and research supporting these options. The chapters in New Perspectives on CALL for Second Language Classrooms synthesize previous CALL theory and research and describe practical applications to both second and foreign language classrooms, including procedures for evaluating these applications. The implementation of CALL at the institutional level is also addressed, with attention to designing multimedia language laboratories and creating collaborative CALL-based projects between educational institutions. Although many chapters locate their descriptions of CALL activities and projects within the ESL/EFL setting, the principles and activities described are equally useful for other language settings. The book does not require prior knowledge of CALL, computers, or software. To assist readers, a glossary of CALL terms and an appendix of CALL Web sites are provided. The book also has its own accompanying Web site (http://www.erlbaum.com/callforL2classrooms) presenting chapter abstracts, author contact information, and regularly updated links to pedagogical, research, and teacher development sites. By integrating theoretical issues, research findings, and practical guidelines on different aspects of CALL, this book offers teachers multiple levels of resources for their own professional development, for needs-based creation of specific CALL activities, for curriculum design, and for implementation of institutional and inter-institutional CALL projects.

Get There Early Bob Johansen a Institute for the Future,2011 Sensing the Future to Compete in the Present Offers a proven approach for making sense out of future challenges and devising positive responses, using methods developed by the respected Institute for the Future Features examples of how organizations like Procter & Gamble, Disney, Reuters, UPS, and the Centers for Disease Control have put the approach into practice Includes the institute's ten-year forecast of trends, challenges, and opportunitiesThese days, every leader struggles with a paradox: you can't predict the future, but you have to be able to make sense of it to thrive. In the age of the Internet, everyone knows what's new, but to succeed you have to be

able to sort out what's important, devise strategies based on your own point of view, and get there ahead of the crowd.Bob Johansen shares techniques the Institute for the Future has been refining for nearly forty years to help leaders navigate what, borrowing a term from the Army War College, he calls the VUCA world: a world characterized by volatility, uncertainty, complexity, and ambiguity. As the institute's ten-year forecast makes clear, leaders now face fewer problems with neat solutions and more dilemmas: recurring, complex, messy, and puzzling situations. Get There Early lays out the institute's three-step Foresight to Insight to Action Cycle that will allow readers to sense, make sense of, and win with dilemmas. Johansen offers specific techniques, ranging from storytelling to simulation gaming, as well as real-world examples to help readers turn the VUCA world on its head through creative use of vision, understanding, clarity, and agility. This book offers hope for leaders facing the constant tension - a dilemma in itself - between judging too soon and deciding too late.

Requirements by Collaboration Ellen Gottesdiener,2002-04-10 Requirements by Collaboration: Workshops for Defining Needs focuses on the human side of software development--how well we work with our customers and teammates. Experience shows that the quality and degree of participation, communication, respect, and trust among all the stakeholders in a project can strongly influence its success or failure. Ellen Gottesdiener points out that such qualities are especially important when defining user requirements and she shows in this book exactly what to do about that fact. Gottesdiener shows specifically how to plan and conduct requirements workshops. These carefully organized and facilitated meetings bring business managers, technical staff, customers, and users into a setting where, together, they can discover, evolve, validate, verify, and agree upon their product needs. Not only are their requirements more effectively defined through this collaboration, but the foundation is laid for good teamwork throughout the entire project. Other books focus on how to build the product right. Requirements by Collaboration focuses instead on what must come first--the right product to build.

Readings in Groupware and Computer-Supported Cooperative Work Ronald M. Baecker,1993-01-13 This comprehensive introduction to the field represents the best of the published literature on groupware and computer-supported cooperative work (CSCW). The papers were chosen for their breadth of coverage of the field, their clarity of expression and presentation, their excellence in terms of technical innovation or behavioral insight, their historical significance, and their utility as sources for further reading. Taken as a whole, the papers and their introductions are a complete sourcebook to the field. This book will be useful for computer professionals involved in the development or purchase of groupware technology as well as for researchers and managers. It should also serve as a valuable text for university courses on CSCW, groupware, and human-computer interaction.
