Ecological and Human Health Impacts of Contaminated Food and Environments Ming Hung Wong,2025-07-16 This book discusses linkages between the natural and disturbed chemical composition of the earth's surface and ecological

and human health. It reviews the environmental geochemical cycles of natural elements and persistent toxic substances (PTS) in the environment, highlighting the degradation of soil and water resources due to human activities such as extraction and usage of minerals. There is an attempt to provide evidence concerning the health effects of consuming contaminated food, due to frequent consumption of mercury-laden fish. Lastly, sources, fates, and ecological effects of various PTS are presented, including microplastics and associated chemicals. Details linkages between the natural and disturbed chemical composition of the earth's surface, and environmental and human health, focusing on food contamination. Discusses emerging pollutants with potential widespread hazardous effects such as bisphenol A and phthalates. Reviews safe food production and quality, as well as the management, regulation and policies concerning toxic chemicals. Contains cutting edge knowledge on safe food production and remediating technologies. Describes how geochemical cycling results in food contamination.

Cyclodextrin Chemistry Zheng-Yu Jin, 2013. *Cyclodextrin Chemistry* covers the preparation of cyclodextrins and cyclodextrin derivatives (CDs), and their applications in industrial and non-industrial areas. An overall theme in the book is the screening of cyclodextrin glycosyltransferase (CGTase), the preparation of sugar-branched cyclodextrins and CDs, and the use of CDs for reconstructing various supermolecule systems. The specific content also includes preparation methods, spectroscopy techniques for CDs analysis, and potential applications in food packaging, nutrient fortification, medicine, cosmetics, textiles, chemicals, feed, agriculture, and environment. It summarizes the research merit of CDs in the past twenty years and also emphasizes hot topics and important areas of cyclodextrin chemistry in the future. Contents: Introduction (Jun-Rong Huang, Hai-Ning Zhuang and Zheng-Yu Jin); Enzymes in Preparing Cyclodextrins (Sheng-Jun Wu, Xiu-Ting Hu, Jin-Moon Kim and Jing Chen); Preparation and Analysis of Cyclodextrin (An-Wei Cheng, Jin-Peng Wang and Zheng-Yu Jin); Preparation of Branched-Cyclodextrins (Xing Zhou, Yao-Qi Tian and Zheng-Yu Jin); Preparation and Analysis of Cyclodextrin Derivatives (Chao Yuan, Yu-Xiang Bai and Zheng-Yu Jin); Basic Application of Cyclodextrins in Supermolecule Chemistry (Tao Feng, Ai-Quan Jiao and Zheng-Yu Jin); Use of Cyclodextrins in Food, Pharmaceutical and Cosmetic Industries (Yao-Qi Tian, Xing Zhou and Zheng-Yu Jin); Application of Cyclodextrins in Non-industrial Areas (Xue-Hong Li and Zheng-Yu Jin). Trace Elements in Terrestrial Environments Domy C. Adriano, 2013-03-19. Knowledge is not to be sought for the pleasures of the mind, or for contention, or for superiority to others, or for profit, or for fame, or power, or any of these inferior things, but for the benefit and use of life. -Sir Francis Bacon. Based on citations in the literature, it is evident the first edition, entitled *Trace Elements in the Terrestrial Environment* (1986), met its primary objective, which was to provide students and professionals with a comprehensive book in many important aspects of trace elements in the environment. Indeed the extent of its use has exceeded my expectations. As a result of its usefulness and encouragement by colleagues in the field, I was

compelled to write this edition following a similar format, but including new chapters on biogeochemistry, bioavailability, environmental pollution and regulation, ecological and human health effects, and risk and risk management and expanding the coverage to include freshwater systems and groundwater where appropriate. In addition to plants, which was the main biota of emphasis in the earlier edition, fish and wildlife and invertebrates (both terrestrial and aquatic) are discussed as necessary. The ecological and human health effects of major environmental contaminants, such as As, Cd, Cr, Pb, and Hg are also highlighted, along with relevant information on potential risks to the ecology and human health.

Iron in Biology Yoshitsugu Shiro, Hitomi Sawai, Takehiko Tosha, 2025-06-13 Heavy metals essential to organisms are termed "biometals". Bio-inorganic chemistry deals with the functions of biometals in vivo at an atomic to molecular level, while cellular regulation of biometals such as absorption and transport has been investigated in cell biology. Although these research fields are independently developed and matured, interdisciplinary information across these fields is required for a comprehensive understanding of the roles of biometals at atomic to molecular, cellular and organism levels. This book focuses on iron (Fe) in cells, since it is the most abundant metal in living system and is involved in a variety of physiological events such as enzymatic reactions as catalysts and signal transduction. Both excess and shortage of iron cause serious diseases such as anaemia, cancer and neuronal degeneration. The cellular systems consisting of many specific proteins strictly control the iron contents through the iron dynamics in cells including absorption, sensing, storage, transport and usage. Resulting from a 5-year project on Integrated Biometal Science in Japan, this book not only documents the latest research but also fills a gap between chemical understanding and our real life, by providing fundamental ideas on genetics, drugs and environmental health.
